protection systems**

**11113 - Launching arrangements
for rescue boats**

Description

Fire-extinguishing appliances shall be kept in good order and be available for immediate use at all times..PSCOs observed 14 CO2 cylinders fitted for remote release equipped with type A actuators with safety pins installed. A condition that would prevent remote release to the engine room.

An inflated rescue boat shall be constructed in such a way that when suspended by its bridle or lifting hook: it is of sufficient strength and rigidity to enable it to be lowered and recovered with its full complement of persons and equipment... PSCOs observed that the rigid floor of the rigid floor of the inflatable rescue boat was not properly secured preventing the rescue boat from being lifted by the davit.
