Use of Port State Control Job Aid:

This book is intended to be used by Coast Guard Port State Control (PSC) examiners during foreign-flagged vessel exams. It contains the items that should be examined during a PSC B exam. The PSCO may expand the scope of any exam when there are clear grounds for believing that the condition of the vessel or its equipment does not correspond substantially with the particulars of the certificates, and should reference the PSC A job aid when expanding the exam in the relevant area(s).

The PSC B exam scope was developed to follow the guidelines in the Procedures for Port State Control as well as to add emphasis to areas where a higher risk has been identified in the current regulatory environment (e.g. ballast water, MARPOL Annex VI - ECA). As a matter of routine, certain operational tests and drills will NOT be performed during PSC B exams unless determined by the PSCO to be necessary as part of an expanded exam. *Reasons for expanding the exam must be documented in the MISLE narrative.*

This job aid cites regulations from 74 SOLAS (20), MARPOL, STCW and other conventions and codes. In some cases, the regulations in 74 SOLAS (20) may not apply due to the keel laid date of the vessel. PSC personnel must pay close attention to the applicability dates & verify the correct cites prior to recording deficiencies. USCG policies, such as MSM II are also provided as references. These should never be cited when recording a deficiency on the Form B.

Duty to record deficiencies. All deficiencies identified by the PSCO during the PSC exam should be recorded on the CG-5437B (Form B) and in the activity inspection results. This includes deficiencies corrected prior to the PSCO's departure (i.e. 10c).

This document does not establish or change laws or regulations. References given are only general guides. Refer to IMO publications, CFR's, TTP, NVIC's, and any locally produced guides for specific regulatory references. Prior to the exam, PSCOs should identify the vessel type (e.g. freight, tank), consider potential hazards, such as cargo or confined spaces, and consult the relevant training aid for tasks related to the cargo system.

Section 4: Enhanced Examination

Discussion & Instructions

Discussion. Enhanced exams focus on specific systems and processes. They encourage implementation of new regulations by ship owners and operators, and/or enable the Coast Guard to monitor implementation trends. In addition, enhanced exams may be initiated by the Coast Guard to focus on systems or components that relate to more serious deficiencies, which otherwise would not be readily identified during a PSC exam. Enhanced exam topics are applicable on a quarterly basis. The scope of the exam depends on the system, components, or processes being examined. **Immersion suits** are the enhanced exam subject for April - June, 2022.

Instructions. The PSCO shall conduct an enhanced exam for every PSC A and PSC B exam. As part of this enhanced exam the PSC team will inspect a minimum of four immersion suits to include the following:

- At least one from the remote stowage location
- At least one from the bridge, engine room or similar locations
- At least two from crew staterooms or common stowage area
- Witness two crewmembers donning their immersion suits

Inspection of the immersion suit should include ensuring serviceable condition of the immersion suit, and proper size for the crewmembers. If deficiencies are identified, the PSCO may expand the exam to include more detailed examination of additional immersion suits and/or review of the ship's SMS regarding immersion suit maintenance and care.
