review and evaluation**

Description

In tankers, electrical equipment, cables and wiring shall not be installed in hazardous locations unless it conforms with standards not inferior to those acceptable to the organization as referenced in IEC 60092-502:1999 which stipulates the need for specified training to conduct maintenance on approved electrical installations. Intrinsically safe and explosion proof equipment (exc lighting fixtures) within the electrical hazardous area zone were found to be improperly maintained and not installed in accordance with the referenced standard.

The company should establish procedures to ensure that the ship is maintained in accordance with the provisions of the relevant rules and regulations established by the company. The technical and/or operational nature of the deficiencies noted provided evidence of serious failure of the implementation of the ISM code. An external audit report from the RO, satisfactory to the OCMI must be submitted prior to the clearance of this deficiency.
