**07106 - Fire detection and alarm
system**

11108 - Inflatable liferafts

Description

Fire detection systems except as provided in paragraph (a)(8) of this section each towing vessel must have a fire detection system installed to detect engine room fires. Fire detection systems in the engine were not installed properly to manufacturer specifications.

Survival craft must be stowed in accordance with the requirements of 199.130 of this chapter. Each liferaft must be arranged for float free launching. The arrangement must ensure that the liferaft when released and inflated are not dragged under by the sinking vessel. Both liferafts are arranged so they could be dragged under by the sinking vessel.
