26-Apr-18	<p>I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal (APPLICATION NO.: NWW-2007-01303 ) by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Require a full environmental impact statement.</li><li>2. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>

15-Mar-18	<p>I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.</p> <p>The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.</p> <p>In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.</p> <p>And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.</p> <p>Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.</p>

18-Mar-18

I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.

The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.

In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.

And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.

Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.

I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.

The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.

In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.

And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.

Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.

25-Mar-18

I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect, and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.

BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.

Please evaluate BNSF's proposal by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:

1. Extend the public comment period by 120 days from the date of the public notice.
2. Require a full environmental impact statement.
3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.

26-Apr-18	<p>I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. 12-Mar-18

I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.

The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.

In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.

And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.

Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.

The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Extend the public comment period by 120 days from the date of the public notice.</li><li>2. Require a full environmental impact statement.</li><li>3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>
09-Mar-18	<p>I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.</p> <p>The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.</p> <p>In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.</p> <p>And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.</p> <p>Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.</p>

26-Apr-18	<p>I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal (APPLICATION NO.: NWW-2007-01303 ) by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Require a full environmental impact statement.</li><li>2. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>

19-Mar-18	<p>Trade in the Pacific Northwest relies heavily on a modern rail system to move goods and products to both foreign and domestic markets. BNSF's proposal to add a second bridge over Lake Pend Oreille is a perfect example of the kind of investments necessary to ensure our network of trade infrastructure remains world-class. This particular project would benefit both passenger rail and freight rail by easing congestion and improving rail safety. The proposal for a second mainline track across the lake is vital to our economic future here in the Northwest. New investments in rail benefit call trade-related industries in the region, especially agriculture and manufacturing. But it also helps keep a variety of other good family-wage jobs in place — jobs that support local economies and generate tax revenue for local communities.</p> <p>The Sandpoint Junction Connector Project will ensure that trade continues to flow safely through Idaho and Washington ports, supporting industries that supply family wage jobs and fueling the region's economy. I urge your support of this project.</p>

18-Mar-18	<p>I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.</p> <p>The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.</p> <p>In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal (APPLICATION NO.: NWW-2007-01303 ) by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Require a full environmental impact statement.</li><li>2. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>

26-Apr-18	<p>I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. 15-Mar-18	<p>This rail project is critical to the continued growth of my city. The project has significant economic impact, not just on the City of Spokane Valley, but the entire North Idaho, Eastern Washington corridor. The details of that impact are presented by others who will be in contact with you. Suffice it to say, the success of this project ripples across the nation. I support the project, and I hope you will as well.</p>

Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol> <p>I have bicycled around Lake Pend Oreille several times... I am struck by it's beauty and the anchor for the area around the lake. The risk of a disastrous spill or derailment is too great, and the damage done by such an event would outlast everyone alive at the time. To spoil so beautiful a lake and area simply to make transporting more fossil fuel to market so we can choke on the polluted air and swill the polluted water but have marginally less expensive pump prices for driving our cars is nonsensical. Spoiling so beautiful a landmark would be a crime against the planet. Lake Pend Oreille is a natural treasure that needs to be protected, not given up to short-sighted fossil fuel advocates.</p>

25-Mar-18	<p>[NOTE: This individual sent in a comment on 03/25/2018 to Steven Fischer]. I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Extend the public comment period by 120 days from the date of the public notice.</li><li>2. Require a full environmental impact statement.</li><li>3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol> <p>This is an issue that effects what will all of us -- not just those that live by Lake Pend Oreille.</p>

26-Apr-18	<p>I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal (APPLICATION NO.: NWW-2007-01303 ) by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Require a full environmental impact statement.</li><li>2. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>
18-Mar-18	<p>I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.</p> <p>The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.</p> <p>In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.</p> <p>And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.</p> <p>Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.</p>

25-Mar-18	<p>[NOTE: This individual sent in two comments on 03/25/2018 to Steven Fischer and the Coast Guard]. I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Extend the public comment period by 120 days from the date of the public notice.</li><li>2. Require a full environmental impact statement.</li><li>3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>

06-Apr-18	<p>You must require a full study of the environmental impact of a second rail bridge across Lake Pend Oreille Living and extend the comment period to give the community full input. A single derailment in the Lake would alter its purity forever. We need to leave a pure legacy for our children and their children. ¶ In a community that is affected by rail transport on a daily basis, I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. ¶ As proposed, this project would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, and the Pacific Northwest. ¶ BNSF's proposal could change the built and natural environments, and BNSF's operations would also change as a result, further affecting safe navigability on the lake, emergency response times, rail safety and transportation in the region. In fact, this project could hamper naval submarine operations. ¶ Our community, economy, and the surrounding environment depend on maintaining and protecting Lake Pend Oreille and keeping families and businesses along the rail line safe. ¶ Please evaluate BNSF's proposal with the same seriousness and concern we have for this issue. Accordingly, I request the following: 1. Extend the public comment period by 120 days from the date of the public notice. 2. Draft a full environmental impact statement. 3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal. 4. Conduct at least one public hearing before the environmental impact statement is completed and at least one public hearing after it is released.</p>

05-Apr-18	<p>Living in a community that is affected by rail transport on a daily basis, I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. ¶ They recently lost a wheel carriage on a freight train while crossing Lake Pend Oreille. Fortunately it was a grain train and it made it several miles south of the bridge before it derailed the train. Therefore there are some concerns here. ¶ As proposed, this project would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, and the Pacific Northwest. ¶ BNSF's proposal could change the built and natural environments, and BNSF's operations would also change as a result, further affecting safe navigability on the lake, emergency response times, rail safety and transportation in the region. In fact, this project could hamper naval submarine operations. ¶ Our community, economy, and the surrounding environment depend on maintaining and protecting Lake Pend Oreille and keeping families and businesses along the rail line safe. ¶ Please evaluate BNSF's proposal with the same seriousness and concern we have for this issue. Accordingly, I request the following: 1. Extend the public comment period by 120 days from the date of the public notice. 2. Draft a full environmental impact statement. 3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal. 4. Conduct at least one public hearing before the environmental impact statement is completed and at least one public hearing after it is released.</p>

13-Mar-18	<p>I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.</p> <p>The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.</p> <p>In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.</p> <p>And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.</p> <p>Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.</p>

28-Apr-18	<p>Judy and Lester Hoyle have a duplicate email letter sent on 4/28/18. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Extend the public comment period by 120 days from the date of the public notice.</li><li>2. Require a full environmental impact statement.</li><li>3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>

20-Mar-18

As a resident of Sandpoint, I am profoundly concerned about the environmental impact, and other impacts that a second rail bridge will have on the community I have chosen to start and raise a family in. I am a nationally published history author working on a project in Sandpoint, and my fiancé is a doctor in Sandpoint, and we both enjoy contributing positively to the community we both consciously decided to live in- before the proposal for the second rail bridge. Data driven decisions are important to us, and we both firmly believe that there is no responsible or educated way to move forward without proper investigation of the potential issues that may come of this new development. We both believe that the following is tremendously important to both consider and implement before moving forward with the rail bridge proposal in any capacity whatsoever, and that not doing so unjustly places not just environmental safety, but our lives and well-being in this area at risk:

Living in a community that is affected by rail transport on a daily basis, I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States.

As proposed, this project would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, and the Pacific Northwest.

BNSF's proposal could change the built and natural environments, and BNSF's operations would also change as a result, further affecting safe navigability on the lake, emergency response times, rail safety and transportation in the region. In fact, this project could hamper naval submarine operations.

Our community, economy, and the surrounding environment depend on maintaining and protecting Lake Pend Oreille and keeping families and businesses along the rail line safe.

Please evaluate BNSF's proposal with the same seriousness and concern we have for this issue. Accordingly, I request the following:

1. Extend the public comment period by 120 days from the date of the public notice.
2. Draft a full environmental impact statement.
3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.
4. Conduct at least one public hearing before the environmental impact statement is completed and at least one

29-Apr-18	<p>I am extremely concerned about BNSF's proposal to construct NEW bridges in Bonner County, Idaho.</p> <p>BNSF's proposal, and the range of potential impacts, risks, and hazards upon the natural and built environment are SO SIGNICANT that a full EIS is entirely warranted.</p> <p>I am certain that you understand this, as well as the NEPA guidelines requiring a full EIS. I am not certain, however, why you have initiated only an EA.</p> <p>If the initial call for a simple EA was based upon BNSF's representations, then I am one of MANY to inform you that BNSF has regularly and continually misrepresented the potential impacts on safety, human health, lake navigability, emergency response times, environmental impacts, rail safety and transportation in the region.</p> <p>The hazards and damage potential resulting from a single accident or derailment (there were FOUR derailments in the immediate area in 2017 alone) REQUIRE A FULL EIS as directed by NEPA.</p> <p>I am, therefore, formally requesting a full EIS and EIS process for USACE Application No. NWW-2007-01202. Anything less than an EIS would be legally indefensible.</p>
26-Apr-18	<p>I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal (APPLICATION NO.: NWW-2007-01303 ) by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Require a full environmental impact statement.</li><li>2. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>

01-May-18

Regarding the BNSF rail bridges proposed for Lake Pend Oreille near the city of Sandpoint, Idaho:

I am opposed to this project moving forward without a complete Environmental Impact Statement (EIS) for several reasons. I understand that the US Coast Guard is the lead agency responsible for implementing the National Environmental Policy Act commonly referred to as NEPA.

There is much to consider in this proposal as it relates to the local environs including maintaining clean water, ensuring quality habitat for a wide species of local and migratory animals, potential for adverse impacts on the health and well being of the community and arguably an inordinate increase in traffic congestion.

I hope you understand the railroad has very little obligation to contribute to infrastructure (5%) and the rail lines are operating at or near capacity already. Any increase with a huge number of at grade crossings will add to the already nightmarish waits sometimes exceeding twenty minutes at vital crossings. Solely from an emergency response point of view the situation has become nearly untenable.

Further, the increase in noise pollution (terrible now) will become increasingly worse and the diesel fumes which are bad now will become a tragedy especially for asthmatic children.

The odds of a tragic over water derailment will double under this proposal.

Please consider carefully the legacy we are leaving for future generations, one of an ever increasing risk of serious health damage and the specter of a catastrophic event of the worst kind.

Therefore, as lead agency for NEPA I urge you to implement a complete EIS requirement for this project.

Thanks you for your consideration on this important issue.

25-Mar-18	<p>[NOTE: This individual sent in a comment on 03/25/2018 to Steven Fischer]. I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. 21-Mar-18	<p>I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.</p> <p>The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.</p> <p>In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.</p> <p>And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.</p> <p>Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.</p>

These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal (APPLICATION NO.: NWW-2007-01303 ) by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Require a full environmental impact statement.</li><li>2. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>

Living in a community that is affected by rail transport on a daily basis, I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States.

As proposed, this project would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, and the Pacific Northwest.

BNSF's proposal could change the built and natural environments, and BNSF's operations would also change as a result, further affecting safe navigability on the lake, emergency response times, rail safety and transportation in the region. In fact, this project could hamper naval submarine operations.

Our community, economy, and the surrounding environment depend on maintaining and protecting Lake Pend Oreille and keeping families and businesses along the rail line safe.

**21-Mar-18** Please evaluate BNSF's proposal with the same seriousness and concern we have for this issue. Accordingly, I request the following:

1. Extend the public comment period by 120 days from the date of the public notice.
2. Draft a full environmental impact statement.
3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.
4. Conduct at least one public hearing before the environmental impact statement is completed and at least one public hearing after it is released.

We've had 4 derailments in the last year! Why must we risk many people's only water source for a multi-billion dollar company which gives nothing in return? All the risk, no benefit. Pathway could easily be changed to avoid waterways as much as possible. Is this truly too much too ask? Please help us!

I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.

BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.

Please evaluate BNSF's proposal (APPLICATION NO.: NWW-2007-01303 ) by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:

1. Require a full environmental impact statement.
2. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.

03-Mar-18	<p>I support this project because railroads are more efficient in moving freight compared to trucks. I read somewhere that a boxcar can carry about the equivalent of three semi-truck trailers, using less fuel and creating less air pollution. Please approve this project. Ideally this project would help get some trucks off of I-90 and onto rail cars so tourists and local residents can have a more pleasant drive.</p>
15-Mar-18	<p>I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.</p> <p>The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.</p> <p>In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.</p> <p>And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.</p> <p>Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.</p>

[NOTE: This individual sent in two comments on 03/27/2018 to Steven Fischer and the Coast Guard]. I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.

BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.

Please evaluate BNSF's proposal by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:

1. Extend the public comment period by 120 days from the date of the public notice.
2. Require a full environmental impact statement.
3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.

Thank you very much for your attention.

18-Mar-18

I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.

The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.

In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.

And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.

Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.

26-Mar-18	<p>Lake Pend Oreille is Idaho's largest and deepest lake. It is home to threatened bull trout and an entire ecosystem of aquatic life; the lake provides a regional drinking water source and is a major tourism asset. In 2017 alone, four trains derailed in this area near waterways. Just a single fossil fuel train derailment could damage and change Lake Pend Oreille forever.</p> <p>I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. 26-Mar-18	<p>There are 3 identical comments.</p> <p>Does anyone in their right mind think that putting bridges over Lake Pend Oreille, a lake that supplies drinking water to the surrounding communities, so that coal and oil trains can travel over them a good idea? Oil and coal trains crash and derail all the time. Does the state of ID think it's ok if coal and/or oil spills into this vitally important water source? This proposal screams for a comprehensive EIS that will analyze the cumulative impacts of these bridges.</p> <p>I find BNSF's proposal to construct a series of bridges in Bonner County, Idaho extremely concerning. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"> <li>1. Extend the public comment period by 120 days from the date of the public notice.</li> <li>2. Require a full environmental impact statement.</li> <li>3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li> </ol>
27-Apr-18	<p>Putting another bridge across Lake Pend Oreille so that BNSF can carry even more toxic dirty energy in their railcars, is a really bad idea. This lake provides drinking water and is a major tourist attraction. Even one spill could ruin this lake for decades to come. It's just not worth putting it in BNSF's crosshairs. They already have one bridge across the lake so there is no reason to put in another one. There needs to be an extensive EIS done to assess all the issues that this bridge and the others they want to build in the area will have on the environment and how it will impact transportation. ¶ Therefore, I oppose BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest. ¶ BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement. ¶ Please evaluate BNSF's proposal (APPLICATION NO.: NWW-2007-01303 ) by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following: 1. Require a full environmental impact statement. 2. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</p>

28-Apr-18	<p>Sue Jarrard has a duplicate email letter sent on 4/28/18. I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.

The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.

In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.

And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.

Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.

Montana's Rail Service Competition Council (RSCC) was established by the Montana Legislature in 2005. The thirteen-member council is composed of representatives of the executive and legislative branches of government, and the private sector. Members have diverse expertise, including knowledge of trucking, Class I and II railroads, shipping of various types of commodities, passenger rail service, and economic development. ¶ One of the RSCC's duties is to "promote rail service competition in the state that results in reliable and adequate service at reasonable rates" (2-15-2511, Montana Code Annotated). The rail corridor that crosses over Lake Pend Oreille near Sandpoint, Idaho is critical for transport of freight and passengers into, out of, and through Montana. Construction of a second bridge over Lake Pend Oreille will alleviate congestion and provide more efficient transport of freight and passengers. ¶ The RSCC voted unanimously to support the BNSF Railway permit applications to build a second bridge over Lake Pend Oreille near Sandpoint, Idaho. I appreciate your consideration of our comments.

One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal (APPLICATION NO.: NWW-2007-01303 ) by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Require a full environmental impact statement.</li><li>2. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>

16-Mar-18	<p>I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.</p> <p>The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.</p> <p>In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.</p> <p>And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.</p> <p>Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.</p>
26-Apr-18	<p>I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. 25-Mar-18

I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.

BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.

Please evaluate BNSF's proposal by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:

1. Extend the public comment period by 120 days from the date of the public notice.
2. Require a full environmental impact statement.
3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.

21-Mar-18

Living in a community that is affected by rail transport on a daily basis, I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States.

As proposed, this project would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, and the Pacific Northwest.

BNSF's proposal could change the built and natural environments, and BNSF's operations would also change as a result, further affecting safe navigability on the lake, emergency response times, rail safety and transportation in the region. In fact, this project could hamper naval submarine operations.

Our community, economy, and the surrounding environment depend on maintaining and protecting Lake Pend Oreille and keeping families and businesses along the rail line safe.

Please evaluate BNSF's proposal with the same seriousness and concern we have for this issue. Accordingly, I request the following:

1. Extend the public comment period by 120 days from the date of the public notice.
  2. Draft a full environmental impact statement.
  3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.
  4. Conduct at least one public hearing before the environmental impact statement is completed and at least one public hearing after it is released.
- I have concern for crossing at Kootenai Bay road as there are over 1,200 residents blocked at crossing and no emergency crews could get to us for at least 10 minutes. Shorter not longer trains. Less frequency as well is needed.

One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal (APPLICATION NO.: NWW-2007-01303 ) by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"> <li>1. Require a full environmental impact statement.</li> <li>2. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li> </ol>
26-Mar-18	<p>Duplicate: I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. 15-Mar-18	<p>I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.</p> <p>The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.</p> <p>In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.</p> <p>And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.</p> <p>Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.</p>

26-Mar-18	<p>There are 3 identical comments.</p> <p>I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. 22-Mar-18	<p>Proposed rail bridge construction in Bonner County Idaho needs a full environmental impact statement, a longer public comment period, and at least one public hearing on the EIS. Please do not fast track a set of projects that will have deep impacts on our daily lives just through increased rail traffic, and, sooner or later, will likely have devastating impacts from a derailment.</p>
25-Mar-18	<p>I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"> <li>1. Extend the public comment period by 120 days from the date of the public notice.</li> <li>2. Require a full environmental impact statement.</li> <li>3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li> </ol>

27-Apr-18

I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.

BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.

Please evaluate BNSF's proposal (APPLICATION NO.: NWW-2007-01303 ) by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:

1. Require a full environmental impact statement.
2. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.

I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.

BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.

Please evaluate BNSF's proposal (APPLICATION NO.: NWW-2007-01303 ) by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:

1. Require a full environmental impact statement.
2. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.

28-Mar-18	<p>[PDF Attachment] We have reviewed the application by Burlington Northern Santa Fe Railway Company (BNSF) to construct an over-water rail bridge across Lake Pend Oreille (LPO) and Sand Creek in Bonner County, Idaho. The purpose of these comments is to assist the decision-making authority by providing technical information addressing potential effects on wildlife and wildlife habitat and how any adverse affects might be mitigated. It is not the purpose of Idaho Department of Fish and Game to support or oppose this proposal. [MORE PAGES OF TEXT + REFERENCES] Recommendations ¶ While BNSF evidently owns the lakebed below the action area, the species that rely on functional liminology of LP are the property of the citizens of Idaho. Millions of dollars have been invested in the protection, perpetuation, and management of Lake Pend Oreille fish and wildlife resources. As the state management agency charged with stewardship for these resources, our objective is to work with project proponents to ensure that no net loss of fish or wildlife habitat or population viability occurs, and to ensure that opportunities for citizens to enjoy these resources are not lost or impaired. ¶ At minimum, we recommend the following Best Management Practices during construction: • Minimize nighttime lighting of construction area and new bridges • Use bubble curtains on all pile driving, including work bridge and Bridge 3.1 installation • Use turbidity curtains during piling removal as well as installation • Decontaminate all equipment working in or around water to remove aquatic invasive species. ¶ The most significant impacts to fish and wildlife would occur with a hazardous material spill in LPO. Therefore, we recommend BNSF address all vulnerabilities in the rail bridge hazard zone and invest in spill equipment and training that will reduce response time, particularly between mid-October and mid-May. Based on other settlements across the country, remediation and mitigation for a significant hazardous material spill would be expected to cost BNSF more than additional preparedness measures, and some losses would likely be irreplaceable. Updated BNSF GRP information should specifically address how the vulnerabilities identified by the Northwest Area Council have been resolved. ¶ As identified above, we recommend the application not be approved until a mitigation plan is finalized for the 1.26 acres of nearshore fill currently unaccounted for in the application (Item 18). We thank the Idaho Department of Lands for extending their comment period and organizing two public hearings. We are willing to work with BNSF, regulatory agencies, and community partners to identify opportunities that address and mitigate both reduced ecosystem function and increased spill risk, with the objective of reaching solutions that maintain, replace, and/or restore impacted fish and wildlife habitat and populations.</p>

One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal (APPLICATION NO.: NWW-2007-01303 ) by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Require a full environmental impact statement.</li><li>2. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>

16-Mar-18	<p>I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.</p> <p>The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.</p> <p>In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.</p> <p>And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.</p> <p>Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.</p>

26-Mar-18	<p>There are 3 identical comments.</p> <p>Living in a community that is affected by rail transport on a daily basis, I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States.</p> <p>As proposed, this project would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, and the Pacific Northwest.</p> <p>BNSF's proposal could change the built and natural environments, and BNSF's operations would also change as a result, further affecting safe navigability on the lake, emergency response times, rail safety and transportation in the region. In fact, this project could hamper naval submarine operations.</p> <p>Our community, economy, and the surrounding environment depend on maintaining and protecting Lake Pend Oreille and keeping families and businesses along the rail line safe.</p> <p>Please evaluate BNSF's proposal with the same seriousness and concern we have for this issue. Accordingly, I request the following:</p> <ol style="list-style-type: none"> <li>1. Extend the public comment period by 120 days from the date of the public notice.</li> <li>2. Draft a full environmental impact statement.</li> <li>3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li> <li>4. Conduct at least one public hearing before the environmental impact statement is completed and at least one public hearing after it is released.</li> </ol>
26-Mar-18	<p>Living in a community that is affected by rail transport on a daily basis, I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. ¶ As proposed, this project would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, and the Pacific Northwest. ¶ BNSF's proposal could change the built and natural environments, and BNSF's operations would also change as a result, further affecting safe navigability on the lake, emergency response times, rail safety and transportation in the region. In fact, this project could hamper naval submarine operations. ¶ Our community, economy, and the surrounding environment depend on maintaining and protecting Lake Pend Oreille and keeping families and businesses along the rail line safe. ¶ Please evaluate BNSF's proposal with the same seriousness and concern we have for this issue. Accordingly, I request the following: 1. Extend the public comment period by 120 days from the date of the public notice. 2. Draft a full environmental impact statement. 3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal. 4. Conduct at least one public hearing before the environmental impact statement is completed and at least one public hearing after it is released.</p>

26-Apr-18	<p>I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal (APPLICATION NO.: NWW-2007-01303 ) by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Require a full environmental impact statement.</li><li>2. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>

20-Mar-18

I have lived in Sandpoint for 28 years. I live within blocks of the BNSF's rail line. In these years I have noticed a significant increase in rail transport and associated train delays in our town.

Living in a community that is affected by rail transport on a daily basis, I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States.

As proposed, this project would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, and the Pacific Northwest.

The purpose of doing an environmental assessment is to determine if there are significant effects associated with a project. If there are significant effects then an Environmental Impact Statement is necessary to determine if the significant effects are irreversible and irretrievable. So at this juncture in the NEPA process I don't see how the concerns of the community; potential oil/hazardous substance spill with more bridges and rail traffic that the USCG and ACE can definitively determine that an environmental assessment would be adequate. The risks of a derailment into the lake with higher rail traffic increases significantly. With this significant risk to our lake's water quality and the devastating effects to the human, aquatic, and wildlife communities that depend on this water source it only seems logical that an environmental impact statement would be completed.

BNSF's proposal could change the built and natural environments, and BNSF's operations would also change as a result, further affecting safe navigability on the lake, emergency response times, rail safety and transportation in the region. In fact, this project could hamper naval submarine operations.

Our community, economy, and the surrounding environment depend on maintaining and protecting Lake Pend Oreille and keeping families and businesses along the rail line safe.

Please evaluate BNSF's proposal with the same seriousness and concern we have for this issue. Accordingly, I request the following:

1. Extend the public comment period by 120 days from the date of the public notice.
2. Draft a full environmental impact statement.
3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.

15-Mar-18

I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.

The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.

In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.

And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.

Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.

15-Mar-18

I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.

The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.

In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.

And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.

Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.

Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.

23-Mar-18

With the Sandpoint Junction Connector Project undergoing regulatory review, I write to voice my support for this project and ask for its timely approval during your permitting process. Investing in our future means investing in rail, and this is the ideal infrastructure project to do just that. The Sandpoint project will streamline the routes of trains carrying goods to market, freeing up room for more economic growth in the surrounding region.

As a community leader, it is my mission to support policies that encourage economic opportunity for all Washingtonians. Rail is closely intertwined with the Spokane economy and the regional industries that use it to satisfy their customers. But rail is also a smart investment because it is the safest form of transportation we have. No mode of transportation is more reliable than freight rail when it comes to safely delivering commodities to their destinations.

Despite this, rail companies like BNSF still heavily invests annually in their safety efforts. BNSF rail lines receive safety inspections far more frequently than what is required. In addition, BNSF maintains highly-detailed geographic response plans that are suited specifically for areas that are environmentally sensitive, such as Lake Pend Oreille. This further assures rail's safety in our communities. The Sandpoint project would build upon this strong record by increasing the safety of train traffic in the area.

Our friends and neighbors recognize the importance of maintaining a strong rail network and modernizing it where appropriate. That's why the people of Spokane, Washington mobilized last fall to overwhelmingly vote down a proposal that would have limited rail activity through the city. Rail is essential to the prosperity of the Pacific Northwest, and efforts to inhibit it must be prevented. At the same time, we should seize opportunities that offer vast improvements in the rail network.

As a resident of Spokane, I know that transportation infrastructure is the lifeblood of our economy and this proposed second track and bridge will provide a net benefit to the entire region. The Pacific Northwest owes not only its past to a strong rail network, but its future as well. Investing in rail will keep our region a booming trade hub with the rest of the world. That is why it would be wise to invest in our rail network.

I hope that you will help this project receive the speedy approval it deserves.

26-Apr-18

I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.

BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.

Please evaluate BNSF's proposal (APPLICATION NO.: NWW-2007-01303 ) by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:

1. Require a full environmental impact statement.
2. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.

27-Apr-18	<p>Duplicate: I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. 06-Mar-18	<p>I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.</p> <p>The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.</p> <p>In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.</p> <p>And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.</p> <p>Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.</p>

26-Apr-18	<p>Duplicate: I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. 13-Mar-18

I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.

The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.

In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.

And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.

Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.

One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal (APPLICATION NO.: NWW-2007-01303 ) by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Require a full environmental impact statement.</li><li>2. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>

06-Mar-18	<p>I am a citizen of Sandpoint and I read very recently of BNSF's plans to build a second railway bridge across Lake Pend Oreille. I am not in favor of this move nor will I ever be. I will campaign regularly and energetically against this proposal. The citizens of Sandpoint want less train traffic not more coming through our community. We have seen trail derailments all around us in the last couple years: the grain derailment last year down in Sagle, the multiple derailments along the Clark Fork. All it takes is one bad derailment of chemicals or oil to damage the Lake for a long time in to the future. Please do not put the rights of a big corporation with deep pockets above the rights of local citizens who plan and hope to live here for the rest of their lives.</p>

Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Require a full environmental impact statement.</li><li>2. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>

27-Apr-18	<p>I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal (APPLICATION NO.: NWW-2007-01303 ) by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Require a full environmental impact statement.</li><li>2. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>
15-Mar-18	<p>I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.</p> <p>The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.</p> <p>In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.</p> <p>And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.</p> <p>Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.</p>

13-Mar-18

The Idaho Association of Commerce & Industry (IACI) is Idaho's largest and most active business trade organization representing members from all across Idaho in a wide variety of commercial and industrial activities. BNSF Railway is an outstanding member of our organization committed to the mission of safe and efficient movement of products and raw materials in the United States. ¶ We are writing in support of their application for the Sandpoint Junction Connector project, which will improve the efficiency of rail travel through northern Idaho but, most importantly, improve the human and environmental safety in the area. Clearly, BNSF is making a commitment to that safety through the investment of millions of dollars into the improvements of their rail system. This factor is critical to ensure the long-term viability and environmental protection of the corridor, which is critical to the region and to the state of Idaho and all of our members that use multiple modes of transportation options. ¶ With the expansion of the project will come shorter wait times, improving air quality in the area by allowing trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. Shorter wait times for autos and trains means less idling, and that is an improvement in efficiency and environmental quality. ¶ In addition, the new rail will be the most technologically sophisticated and safest in the industry. This is a critical factor when moving products across Lake Pend Oreille. Making the lake crossing more stable and efficient using this latest technology available will improve the overall environmental safety of the track. ¶ We strongly encourage approval of the BNSF application. IACI and its membership stand with BNSF and their willingness to invest in the economy and, at the same time, improve the environment and the safety of transportation in Idaho.

27-Apr-18

I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.

BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.

Please evaluate BNSF's proposal (APPLICATION NO.: NWW-2007-01303 ) by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:

1. Require a full environmental impact statement.
2. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.

I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. 14-Mar-18

I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.

The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.

In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.

And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.

Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.

09-Mar-18

I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.

The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.

In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.

And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.

Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.

Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal (APPLICATION NO.: NWW-2007-01303 ) by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Require a full environmental impact statement.</li><li>2. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>

26-Apr-18	<p>I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. 13-Mar-18	<p>I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.</p> <p>The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.</p> <p>In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.</p> <p>And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.</p> <p>Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.</p>

20-Apr-18	<p>The South Dakota Association of Cooperatives is expressing its support for the Sandpoint Junction Connector project proposed by BNSF. Our member cooperatives rely heavily on a safe, efficient freight rail system to transport South Dakota agricultural products. Last year, BNSF shipped over 130,000 carloads of wheat, soybeans, corn, sweet beets, beans, and other agricultural products from South Dakota to both domestic and foreign destinations. ¶ We believe the proposed Sandpoint Junction Connector project will provide BNSF with additional capacity needed to reduce congestion, enhance safety, and improve rail service. BNSF's recent \$2 billion investment in expanding its northern transcontinental route demonstrates its commitment to its customers and the communities it serves. ¶ We ask your timely review and approval of BNSF's application for the Sandpoint Junction Connector project.</p>

05-Apr-18	<p>I feel that as a resident of this beautiful part of the Idaho I have the right to the full protection of the environment. Without a full and complete assessment of the environmental impact of such a bridge, the risks are too great. Too often these days sincere concern for our communities is being asked to take a backseat. Rail accidents happen and the damages are far reaching. We can't afford not to fully study this issue; the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States.</p>

25-Mar-18

I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new bridges would facilitate increased shipments of coal, oil, and other hazardous materials throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.

BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.

Please evaluate BNSF's proposal by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:

1. Extend the public comment period by 120 days from the date of the public notice.

2. Require a full environmental impact statement.

3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.

Please evaluate BNSF's proposal by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:

1. Extend the public comment period by 120 days from the date of the public notice.

2. Require a full environmental impact statement.

3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.

06-Mar-18

I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.

The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.

In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.

And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.

Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.

26-Apr-18	<p>The Idaho Association of Commerce &amp; Industry (IACI) is Idaho's largest and most active business trade organization representing members from all across Idaho in a wide variety of commercial and industrial activities. BNSF Railway is an outstanding member of our organization committed to the mission of safe and efficient movement of products and raw materials in the United States.</p> <p>We are writing in support of their application for the Sandpoint Junction Connector project, which will improve the efficiency of rail travel through northern Idaho but, most importantly, improve the human and environmental safety in the area. Clearly, BNSF is making a commitment to that safety through the investment of millions of dollars into the improvements of their rail system. This factor is critical to ensure the long-term viability and environmental protection of the corridor, which is critical to the region and to the state of Idaho and all of our members that use multiple modes of transportation options.</p> <p>With the expansion of the project will come shorter wait times, improving air quality in the area by allowing trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. Shorter wait times for autos and trains means less idling, and that is an improvement in efficiency and environmental quality. In addition, the new rail will be the most technologically sophisticated and safest in the industry. This is a critical factor when moving products across Lake Pend Oreille. Making the lake crossing more stable and efficient using this latest technology available will improve the overall environmental safety of the track.</p> <p>We strongly encourage approval of the BNSF application. IACI and its membership stand with BNSF and their willingness to invest in the economy and, at the same time, improve the environment and the safety of transportation in Idaho.</p>

One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal (APPLICATION NO.: NWW-2007-01303 ) by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Require a full environmental impact statement.</li><li>2. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>

26-Apr-18

I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.

BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region.

These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.

Please evaluate BNSF's proposal (APPLICATION NO.: NWW-2007-01303 ) by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:

1. Require a full environmental impact statement.
2. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.

As a former resident of northern Idaho, a biologist and attorney, and the wife of a retired railroad conductor familiar with train accidents, I'm asking that you please not allow for the possibility of a devastating coal, oil, hazardous-substance train accident to accelerate Earth's sixth mass extinction episode:

A July 5, 2017, article in the Proceedings of the National Academy of Sciences identifies that Earth is in the midst of its sixth mass extinction episode: Biological annihilation via the ongoing sixth mass extinction signaled by vertebrate population losses and declines.

The article concludes: "...Earth's sixth mass extinction episode has proceeded further than most assume. ... (T)he proximate causes of population extinctions (are): habitat conversion, climate disruption, overexploitation, toxification, species invasion, disease, and (potentially) large-scale nuclear war ... (T)he ultimate drivers of those immediate causes of biotic destruction (are), namely, human overpopulation and continued population growth, and overconsumption, especially by the rich. ... (T)he sixth mass extinction is already here and the window for effective action is very short, probably two or three decades at most. All signs point to ever more powerful assaults on biodiversity in the next two decades, painting a dismal picture of the future of life, including human life."

16-Mar-18	<p>I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.</p> <p>The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.</p> <p>In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.</p> <p>And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.</p> <p>Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.</p>

These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal (APPLICATION NO.: NWW-2007-01303 ) by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Require a full environmental impact statement.</li><li>2. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>

13-Mar-18

I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.

The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.

In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.

And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.

Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.

26-Apr-18

I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.

BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.

Please evaluate BNSF's proposal (APPLICATION NO.: NWW-2007-01303 ) by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:

1. Require a full environmental impact statement.
2. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.

26-Apr-18	<p>Duplicate: I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest. ¶ BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement. ¶ Please evaluate BNSF's proposal (APPLICATION NO.: NWW-2007-01303 ) by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following: 1. Require a full environmental impact statement. 2. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</p>

25-Mar-18	<p>Submitted 3 times.</p> <p>I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect, and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. 16-Mar-18

I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.

The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.

In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.

And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.

Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.

These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal (APPLICATION NO.: NWW-2007-01303 ) by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"> <li>1. Require a full environmental impact statement.</li> <li>2. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li> </ol>
<p>07-Mar-18</p>	<p>I wish to comment on the proposed second railroad bridge over Lake Pend Oreille near Sandpoint, ID. As a retired trainman/conductor who has had to wait at on one end or other of the single tracked bridge many times over the years, I can state this new bridge will be very important to keep trains moving in a timely efficient manner. That said, it will reduce potential wait times at public grade crossings, on either side, it will reduce engine idling and resulting pollution while waiting turn to use the single track and will be valuable in expediting train traffic. I can see absolutely no down side to a second bridge and whole heartedly favor it's timely construction.</p>

25-Mar-18	<p>[NOTE: This individual sent in two comments on 03/25/2018 to Steven Fischer]. I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. 26-Apr-18

I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.

BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.

Please evaluate BNSF's proposal (APPLICATION NO.: NWW-2007-01303 ) by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:

1. Require a full environmental impact statement.
2. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.

26-Apr-18

m writing to express several concerns about the proposed BNSF second major, and two minor, bridges near Sandpoint, Idaho.

As a long time member and past board member of the Kinnikinnick Native Plant Society I'm aware of the danger of spreading invasive weeds in the lake when there is fill material brought in or there is any disturbing activity.

The proposed bridges have the potential to negatively affect our endangered Bull Trout.

The bridge and its construction could affect navigability and rail safety. There have been several derailments in recent years. Local availability of spill containment equipment seems appropriate. There is currently minimal equipment and trained staff available when a spill occurs.

BNSF's trains currently affect emergency response times because of delays at crossings and the additional train traffic would likely increase the delays, unless BNSF provides grade separation at critical crossings. Merely keeping trains moving via double tracks does little or nothing if traffic increases as projected. BNSF has not been forthcoming in this respect.

Our area's economy depends, to a great extent, on freedom from noise, water and air pollution. All of these would be negatively affected by the proposed construction and by the resulting increased rail traffic. I have long recognized the value of rail vs. highway and air transport, but remain concerned about the cumulative impacts of this proposal.

As a past elected, and current appointed, official involved with our economic development I urge you to draft a full Environmental Impact Statement, not merely an Environmental Assessment. An EIS is the only way we can see the full impacts and benefits. Public hearings need to be held during, and after the EIS process. This will allow us all to be confident the broad range of cumulative impacts of this major proposed undertaking are considered.

25-Mar-18	<p>[NOTE: This individual sent in a comment on 03/25/2018 to Steven Fischer]. I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Extend the public comment period by 120 days from the date of the public notice.</li><li>2. Require a full environmental impact statement.</li><li>3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>

21-Mar-18	<p>Living in a community that is affected by rail transport on a daily basis, I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States.</p> <p>As proposed, this project would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, and the Pacific Northwest.</p> <p>BNSF's proposal could change the built and natural environments, and BNSF's operations would also change as a result, further affecting safe navigability on the lake, emergency response times, rail safety and transportation in the region. In fact, this project could hamper naval submarine operations.</p> <p>Our community, economy, and the surrounding environment depend on maintaining and protecting Lake Pend Oreille and keeping families and businesses along the rail line safe.</p> <p>Please evaluate BNSF's proposal with the same seriousness and concern we have for this issue. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Extend the public comment period by 120 days from the date of the public notice.</li><li>2. Draft a full environmental impact statement.</li><li>3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li><li>4. Conduct at least one public hearing before the environmental impact statement is completed and at least one public hearing after it is released.</li></ol>

One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Extend the public comment period by 120 days from the date of the public notice.</li><li>2. Require a full environmental impact statement.</li><li>3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>
26-Apr-18	<p>I am very concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal (APPLICATION NO.: NWW-2007-01303 ) by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Require a full environmental impact statement.</li><li>2. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>

Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>
13-Mar-18	<p>I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.</p> <p>The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.</p> <p>In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.</p> <p>And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.</p> <p>Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.</p>

One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Extend the public comment period by 120 days from the date of the public notice.</li><li>2. Require a full environmental impact statement.</li><li>3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>

30-Apr-18	<p>Living in Spokane, a community that is affected by rail transport on a daily basis, I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. ¶ In Spokane, we rely on the Rathdrum Prairie Aquifer for our drinking water and irrigation needs. I am concerned that if a hazardous substance, such as oil, is ever spilled over the aquifer, that we would suffer from pollution in our drinking water. In Spokane, elevated tracks run high above Hangman Creek, a watershed that is already is [in] very poor condition. A derailment in the Hangman Creek area would be catastrophic to that ecosystem. Even more dangerous is the risk of derailment in downtown Spokane where BNSF rail lines run very near schools, hospitals and businesses. ¶ A full environmental impact statement assessing the risks and impacts to both Lake Pend Oreille and the adjacent communities is imperative. The cumulative regional impact of increased oil and coal transportation by rail must also be assessed. ¶ Our community, economy, and the surrounding environment depend on maintaining and protecting Lake Pend Oreille and keeping families and businesses along the rail line safe. ¶ Please also conduct at least one public hearing before the environmental impact statement is completed and at least one public hearing after it is released.</p>

16-Mar-18	<p>I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.</p> <p>The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.</p> <p>In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.</p> <p>And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.</p> <p>Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.</p>

07-Mar-18	<p>As Government Relations Director of the Montana Chamber of Commerce, I write on behalf of the Montana Chamber in strong support of the construction of the Sandpoint Junction Connector Project. The positive economic ripple effect in the Pacific Northwest as a result of this project will be resounding: increased trade for countless industries, more efficient product shipments, and a boost in tourism with additional passenger trains. Workplace safety is also a top priority for the Montana Chamber, and the efficiencies created by the Sandpoint Junction project will improve the safety of train traffic in the region. Therefore, we urge swift approval of the permits needed for construction.</p> <p>Infrastructure investment is a core objective of the Montana Chamber's 10-year strategic plan, Envision 2026. Increasing rail commerce, especially at the initiative of BNSF Railway to privately fund the project, makes the Sandpoint Junction proposal an easy decision for economic prosperity.</p>

25-Mar-18

I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.

BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.

Please evaluate BNSF's proposal by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:

1. Extend the public comment period by 120 days from the date of the public notice.
2. Require a full environmental impact statement.
3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.

06-Apr-18

Attached is a letter of support for the Sandpoint Junction Connector project from Montana Governor Steve Bullock. The letters are being mailed today but wanted to email you both a copy. (PDF attachment to Admiral Zukunft dated 4/4/2018. Identical letter from MT Governor Bullock to USACE, also a separate PDF in this email) I am pleased to write in support of the proposed Sandpoint Junction Connector project. ¶ Agriculture is one of Montana's largest economic sectors and the backbone of our rural economy. Montana exports wheat, pulse crops, barely [barley], oats, rye, malt, and many other agricultural commodities from our state to feed people across the nation and the world. The majority of these high quality agricultural products are delivered by rail through the Pacific Northwest for markets in Washington, Oregon, California and overseas. ¶ In 2008, BNSF shipped just 25,000 carloads of Montana wheat and 411 carloads of pulse crops to the Pacific Northwest. Today, BNSF ships more than 39,000 carloads of Montana wheat and 3,600 carloads of pulse crops to the Pacific Northwest. This is almost a 55% increase for Montana wheat and nearly 900% increase in pulse crops over the past ten years. The increase in demand is a great benefit to Montana's economy and highlights the changing agricultural food supply chain of the world. To ensure that agricultural producers in Montana, and in our neighboring states, get a fair market price for their quality products we need an efficient and reliable rail network. ¶ The current single lane bridge across Lake Pend Oreille has become a bottleneck for rail shipments coming from Montana during our peak agricultural and harvest times. The longer grain stays in the bin, the less farmers make--causing a ripple effect throughout Montana's economy. Since 2014, BNSF has shown their commitment to the efficient flow of goods by investing millions of dollars and expanding miles of double track along the northern transcontinental route to increase rail capacity. These investments are driven by the record demand for agricultural products from Montana and the west--including an all-time record volume of agricultural products just this past March. ¶ The completion of the Sandpoint Junction Connector project will open up the current bottleneck along the northern corridor and allow BNSF to meet current volume demands and deliver a more reliable service for Montana farms, ranches, businesses, and future exporters. ¶ I am confident the Army Corps of Engineers and the U.S. Coast Guard, along with all local and state entities, will conduct a thorough review and analysis of this proposal. I ask that we get shovels in the ground soon to meet the needs of businesses in Montana and throughout the United States. ¶ Thanks again for the opportunity to share my support for this project. I ask that you consider BNSF Railway's application to proceed with the Sandpoint Junction favorably.

15-Mar-18	<p>Great need for bypass tracks where possible. The increase in volume needs thought.</p> <p>Update crossings to all have gates, no horns even outside urban areas! Instead use visual heavily everybody's on their phone inside a car, IoT style.</p> <p>Then, acceleration sensors are cheap &amp; reliable far better resolution on where trains are provided by a more dense network of sensors.</p> <p>I'm working on 3000-4000hp permagnetic motors as replacements to diesel, no emissions, quiet, no fuel, far less waste-heat, alnico's ok to use, no rare earths, the magnets can be repolarized 3-times for longevity.</p>

18-Mar-18

I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.

The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.

In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.

And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.

Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.

26-Apr-18	<p>I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal (APPLICATION NO.: NWW-2007-01303 ) by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Require a full environmental impact statement.</li><li>2. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>

21-Mar-18

I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.

The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.

In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.

And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.

Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.

26-Mar-18	<p>Living near a community that is affected by rail transport on a daily basis, I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States.¶ As proposed, this project would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, and the Pacific Northwest. ¶ BNSF's proposal could change the built and natural environments, and BNSF's operations would also change as a result, further affecting safe navigability on the lake, emergency response times, rail safety and transportation in the region. In fact, this project could hamper naval submarine operations. ¶ Our community, economy, and the surrounding environment depend on maintaining and protecting Lake Pend Oreille and keeping families and businesses along the rail line safe. ¶ Please evaluate BNSF's proposal with the same seriousness and concern we have for this issue. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Extend the public comment period by 120 days from the date of the public notice.</li><li>2. Draft a full environmental impact statement.</li><li>3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li><li>4. Conduct at least one public hearing before the environmental impact statement is completed and at least one public hearing after it is released.</li></ol>

06-Mar-18

I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.

The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.

In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.

And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.

Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.

28-Mar-18

Thank you very much, Patrick. Yes, I am familiar with the LPO GRP and we are working toward resolving vulnerabilities in the plan, which were identified by IDEQ and local responders. We wanted to make sure the contact listed for the Coast Guard really was the most local and direct contact.

It wasn't until the application for permit by BNSF for the bridges over LPO that I became aware of Coast Guard authority in our area, so I am trying to get myself up to speed. If you have any professional suggestions for improving our GRP we would value your advice.

Steven, while I have your ear, will the Coast Guard be issuing a public comment period for the Sandpoint Connector Project and is the comment period for USCG connected to the comment period for IDL and the Corp? [RESPONSE] Steve, Molly,

Sorry I am getting back to you so late....crazy week, typically respond quicker.

I cut the below table out of the Geographic Response Plan (GRP) for Lake Pend Oreille. The GRP is located at the below link and is maintained by the Environmental Protection Agency. Between Idaho State responders & EPA, they can provide any response info however, I am from that area so I am most certainly happy to be a resource. The GRP is 488 pages long and really comprehensive....and publicly available as a planning document under the Northwest Area Committee. It provides a basic response strategy for the lake to include spill response techniques, comprehensive POC's, and logistical info for the region. Great document!

Molly, I am the Chief of Environmental Response for the 13th Coast Guard District which covers Washington, Oregon, Idaho, & Montana but we primarily respond to Coastal events & on the Columbia River by jurisdiction & have boundaries set by a Memorandum of Agreement with the EPA who responds to Inland zone.

If you want further info, feel free to call me anytime.

[ALSO FROM MCCAHO] As we rarely work with the Coast Guard in the Pend Oreille Basin, I am unfamiliar with your permits. I am curious if the application you are processing for BNSF Sandpoint Connector Bridge is a 404 or is it a separate permit considering different variables. Our Board is primarily concerned with rail safety and emergency response planning, which the 404 permit doesn't address. I am wondering if the Coast Guard is considering those elements.

20-Mar-18

Living in a community that is affected by rail transport on a daily basis, I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States.

While I support train transportation (an often take Amtrak to Seattle and back for business meetings), I am very concerned about a second bridge going in without a comprehensive review. I have some questions I would like answered:

We already have traffic delays in town due to the number of trains; more trains would increase delays and emergency response times. Would BNSF be building overpasses or underpasses so that trains do not stop as much traffic and would they be putting in safer railroad crossings where this cannot happen?

What is going to protect our precious lake from a train derailment and possible chemical or oil spills?

As proposed, this project would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, and the Pacific Northwest.

BNSF's proposal could change the built and natural environments, and BNSF's operations would also change as a result, further affecting safe navigability on the lake, emergency response times, rail safety and transportation in the region. In fact, this project could hamper naval submarine operations.

Our community, economy, and the surrounding environment depend on maintaining and protecting Lake Pend Oreille and keeping families and businesses along the rail line safe.

Please evaluate BNSF's proposal with the same seriousness and concern we have for this issue. Accordingly, I request the following:

1. Extend the public comment period by 120 days from the date of the public notice.
2. Draft a full environmental impact statement.
3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.
4. Conduct at least one public hearing before the environmental impact statement is completed and at least one

25-Mar-18	<p>[NOTE: This individual sent in a comment on 03/25/2018 to Steven Fischer]. I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Extend the public comment period by 120 days from the date of the public notice.</li><li>2. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Extend the public comment period by 120 days from the date of the public notice.</li><li>2. Require a full environmental impact statement.</li><li>3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>

26-Apr-18	<p>I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal (APPLICATION NO.: NWW-2007-01303 ) by taking a hard look at all the direct, indirect and cumulative impacts of the project. 15-Mar-18	<p>I am concerned that Washington State has too often hindered the transportation of products through our state through outright denial of projects, regulations, and delays in the permitting process. These decisions have hurt our economy and lead to increased prices for our citizens. I do support the Sandpoint Junction Connector project, as I believe it will benefit both Idaho and Washington, and urge your swift approval of the permits needed for construction.</p> <p>I have heard that Sandpoint Junction Connector project is a model proposal in many ways. I strongly urge your timely approval of the project's necessary permits.</p>

16-Mar-18

I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.

The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.

In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.

And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.

Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.

26-Apr-18

[Note: McKeown-Gallich had another comment on 4/26/18] I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.

BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.

Please evaluate BNSF's proposal (APPLICATION NO.: NWW-2007-01303 ) by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:

1. Require a full environmental impact statement.
2. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.

19-Mar-18	<p>I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.</p> <p>The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.</p> <p>In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.</p> <p>And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.</p> <p>Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.</p>

09-Mar-18

I write in support of the Sandpoint Junction Connector Project. Considering the national economic importance and local benefits of the project, I urge the Coast Guard to undertake a thorough environmental review in as expeditious a manner as possible. ¶ This critical project is located on the BNSF's Great Northern Corridor and serves as a major artery of trade and passenger rail service for Eastern Washington. These rail lines allow access to the Puget Sound and Columbia River Ports and are critical to U.S. agriculture exports and other shipments. BNSF has made hundreds of millions of dollars of investment in the Corridor. These investments have increase capacity east and west of the project, allowing them to more efficiently handle the rail freight that a growing economy requires. ¶ Freight and passenger trains have moved safely over the existing bridge for more than a century. This important project will allow rail traffic to move safely in both directions simultaneously, reducing wait times for bridge crossings. Currently, backups created by waiting trains can sometimes extend for many miles. Reducing train delays will reduce delays in the surrounding area, improve air quality and reduce noise by cutting idle times when trains are stopped in Sandpoint. ¶ I believe that the environmental approvals for this project are an exmple of the kind that can and should be executed in an efficient manner. I request the agencies avoid delays, which would add unnecessary costs to a privately financed project. I hope that the Coast Guard, Army Corps of Engineers, and state of Idaho environmental regulators can work together to accomplish this expeditiously.

26-Mar-18

I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.

BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.

Please evaluate BNSF's proposal by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:

1. Extend the public comment period by 120 days from the date of the public notice.
2. Require a full environmental impact statement.
3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal. Please evaluate BNSF's proposal by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:
  1. Extend the public comment period by 120 days from the date of the public notice.
  2. Require a full environmental impact statement.
  3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.

26-Mar-18

I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.

BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.

Please evaluate BNSF's proposal by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:

1. Extend the public comment period by 120 days from the date of the public notice.
2. Require a full environmental impact statement.
3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.

Thank you for your consideration.

25-Mar-18

I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.

BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.

Please evaluate BNSF's proposal by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:

1. Extend the public comment period by 120 days from the date of the public notice.
2. Require a full environmental impact statement.
3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.

I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.

The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.

In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.

And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.

Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.

[Note: Metzler left one other comment dated 3/25/18] I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.

BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.

Please evaluate BNSF's proposal by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:

1. Extend the public comment period by 120 days from the date of the public notice.
2. Require a full environmental impact statement.
3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.

Comments received by USACE/IDL in response to PN for Application  
NWW-2007-01303 (2/26/2018)

USCG0032913/27

<p>23-Apr-18</p>	<p>My name is Lisa Meucci. I am a lifelong resident of Washington and Idaho, having spent the entirety of my life so far living in rail-side communities (Spokane, Otis Orchards, Bellingham, Seattle, and Sagle). ¶ We are current owners of family property on Sandy Cove Lane off Bottle Bay Road just a few properties down from where trains head out across the lake over the bridge. My grandparents bought this property back in the early 1970's, so we've had plenty of time living among the trains going back and forth across the bridge, enduring the site and noise of regular activity in addition to construction and maintenance work – day and night. ¶ I am writing regarding the Burlington Northern Santa Fe (BNSF) proposal to build three new rail bridges in the Sand Creek/Lake Pend Oreille watershed. This includes a new bridge across Lake Pend Oreille adjacent to the existing rail bridge, a new bridge over Sand Creek adjacent to the existing rail bridge, and a new bridge over Bridge Street adjacent to the existing rail bridge. ¶ As the lead federal agency in charge of carrying out environmental oversight of the proposed project, I respectfully request that the Coast Guard perform a full Environmental Impact Statement (EIS). ¶ The proposed railway expansion project entails significant direct, indirect, and cumulative impacts to our community, which should be fully examined through an EIS. These include: • Water quality – increased transport of materials (hazardous, etc.) over the lake and through the watershed increases the potential for derailment(s) into our local waterways, threatening water quality. • Wildlife habitat – filling wetland and nearshore areas of the lake for additional bridge construction damages sensitive wildlife habitat beyond repair. The proposed project is within the known and/or historic range of bull trout and its critical habitat. • Emergency response – increased train traffic passing through at-grade rail crossings may cause emergency response delays. • Noise – increased train traffic may result in more whistle-related noise pollution at and around rail crossings and more noise pollution in general when traveling over water. While we have noticed that with the last bridge work and/or modifications to trains • Traffic – increased train traffic across at-grade rail crossings would likely cause more traffic congestion. • Economy – increased train traffic may impact local businesses, property values, aesthetics and the tourism industry. ¶ This proposed project encourages rail activity with cumulative impacts that affect resources far beyond Sandpoint, Bonner County and North Idaho in general, throughout rail-side communities. All of these potential impacts need to be thoroughly evaluated through an EIS before authorization of the proposal is issued.</p>

30-Apr-18	<p>David Michalek has a duplicate email letter sent on 4/30/18. BNSF's proposal to construct a series of bridges in Bonner County, Idaho must be fully studied for its environmental impact and the decision should be based on science, not pay offs, back room deals or the promise of "jobs".</p> <p>Evaluate BNSF's proposal (APPLICATION NO.: NWW-2007-01303 ) by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"> <li>1. Require a full environmental impact statement.</li> <li>2. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li> </ol>

26-Apr-18	<p>I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal (APPLICATION NO.: NWW-2007-01303 ) by taking a hard look at all the direct, indirect and cumulative impacts of the project. 15-Mar-18

I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.

The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.

In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.

And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.

Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.

I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.

The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.

In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.

And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.

Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.

15-Mar-18

I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.

The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.

In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.

And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.

Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.

26-Apr-18	<p>I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal (APPLICATION NO.: NWW-2007-01303 ) by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Require a full environmental impact statement.</li><li>2. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>

19-Mar-18

I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.

The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.

In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.

And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.

Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.

[NOTE: This individual sent in two comments on 03/25/2018 to Steven Fischer and the Coast Guard]. I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.

BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.

Please evaluate BNSF's proposal by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:

1. Extend the public comment period by 120 days from the date of the public notice.
2. Require a full environmental impact statement.
3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.

26-Apr-18	<p>I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal (APPLICATION NO.: NWW-2007-01303 ) by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Require a full environmental impact statement.</li><li>2. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>

<p>25-Mar-18</p>	<p>I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>Marci's family has lived on Lake Pend Oreille since the 1920s. We visit her father frequently. But, we didn't think that our lives would be connected via the coal industry. Longview, Washington is one of the communities that the industry is hoping to use as an exhaust port for its poisons. We're hoping to kill the Millenium Bulk Terminal, given the destructive effect it would have on us. Now it's time to protect the rest of the family in Idaho. We need to move beyond fossil fuels.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal by taking a hard look at all the direct, indirect and cumulative impacts of the project. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>
19-Mar-18	<p>I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.</p> <p>The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.</p> <p>In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.</p> <p>And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.</p> <p>Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.</p>

26-Apr-18	<p>[NOTE: This individual sent in another comment on 04/26/2018 to Steven Fischer]. I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. Require a full environmental impact statement.</li><li>3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol> <p>Our dependence on coal is waning, and this is an unnecessary risk. It only take one accident to have catastrophic consequences for years to come that impact the entire region. Water quality, fish and wildlife would all be negatively impacted by this. Quality of life for people in the region would decrease. Why are we willing to put the health and safety of people and natural resources at risk for the profits of few? We can do better.</p>
27-Apr-18	<p>I live in a community that is largely affected by rail transport on a daily basis, I am very concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. ¶ As proposed, this project would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, and the Pacific Northwest. ¶ BNSF's proposal could change the built and natural environments, and BNSF's operations would also change as a result, further affecting safe navigability on the lake, emergency response times, rail safety and transportation in the region. In fact, this project could hamper naval submarine operations. ¶ Our community, economy, and the surrounding environment depend on maintaining and protecting Lake Pend Oreille and keeping families and businesses along the rail line safe. ¶ Please evaluate BNSF's proposal with the same seriousness and concern we have for this issue. Accordingly, I request the following: 1. Extend the public comment period by 120 days from the date of the public notice. 2. Draft a full environmental impact statement. 3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal. 4. Conduct at least one public hearing before the environmental impact statement is completed and at least one public hearing after it is released.</p>

Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>

26-Apr-18	<p>[Note: Mork has another comment dated 4/26/18] I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal (APPLICATION NO.: NWW-2007-01303 ) by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Require a full environmental impact statement.</li><li>2. NWW-2007-01303 (2/26/2018)

USCG0033313/27

04-May-18	<p>Arvia Morris has a duplicate email letter sent on 5/4/18. I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest. ¶ BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement. ¶ Please evaluate BNSF's proposal (APPLICATION NO.: NWW-2007-01303 ) by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following: 1. Require a full environmental impact statement.</p> <p>2. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</p>
17-Mar-18	<p>I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.</p> <p>The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.</p> <p>In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.</p> <p>And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.</p> <p>Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.</p>

28-Apr-18	<p>Steven Morris has a duplicate email letter sent on 4/28/18. I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. 08-Mar-18	<p>[Also see Jennifer Grosman entry 3/22/2018] I am writing to encourage the prompt permitting approval for the Sandpoint Junction Connector Project over Lake Pend Oreille. The project would have wide-ranging benefits for the economy, trade, and transportation across the Pacific Northwest. It will benefit passenger trains such as Amtrak as well. ¶ America's rail system has grown over the years to cover an expansive 140,000 mile-long network. Private investment from rail companies have enabled this growth and global leadership in rail. It is projects like the Sandpoint Junction Connector that allow the Northwest and America to benefit from a modernized rail system that powers trade and economic activity. Rail companies are well practiced at identifying choke points in the track network that slow the transfer of goods. The proposed project would solve exactly this issue. Currently, trains are forced to come to a complete stop at Lake Pend Oreille to allow oncoming traffic to cross the rail bridge first. The project would address this problem by permitting trains heading in opposite directions to cross at the same time, greatly cutting down on delays for local communities. ¶ The project would not only make the current level of transport more efficient, but it would also lay the groundwork for future growth. There is clearly demand for increased rail capacity and if we don't work to address it now, problems will only multiply. Rail must be able to accommodate increases in trade and economic activity. The Sandpoint Junction Connector Project would do just that, ensuring the reliable and timely delivery of goods as our markets expand. ¶ It is in the best interest of the local community, Idaho, and the region to approve this project in a timely manner.</p>

One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal (APPLICATION NO.: NWW-2007-01303 ) by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Require a full environmental impact statement.</li><li>2. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>

13-Mar-18	<p>I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.</p> <p>The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.</p> <p>In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.</p> <p>And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.</p> <p>Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.</p>

26-Jun-18	<p>The U.S. Army Corps of Engineers stating "blah, blah, blah" following the section on Public Involvement in its Draft Environmental Assessment for the Carey Creek Shoreline Stabilization Project is troubling to me as a local who lives in this area and has concerns about projects being reviewed by federal agencies.</p> <p>Our community, economy and the surrounding environment depend on protecting Lake Pend Oreille and keeping families and businesses along the rail line safe.</p> <p>This was made clear in a 2008 University of Idaho survey of 267 nearshore property owners on Lake Pend Oreille. According to this survey, property owners place "quite" to "extreme" importance on water quality issues, and homeowners "strongly believe" that the lake needs protecting.*</p> <p>Please evaluate BNSF's proposal to add a second rail bridge across Lake Pend Oreille with the same seriousness and concern we have for this issue. Accordingly, I request the following:</p> <ol style="list-style-type: none"> <li>1. Draft a full environmental impact statement.</li> <li>2. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li> <li>3. Conduct at least one public hearing before the environmental impact statement is completed and at least one public hearing after it is released.</li> </ol> <p>*Coombs, D.M. and N. Sanyal. 2008. "Understanding Shoreline Property Owner's Views on the Water Quality of Lake Pend Oreille." A Report for the Tri-State Water Quality Council. Moscow, ID: University of Idaho.</p>

20-Mar-18	<p>Living in a community that is affected by rail transport on a daily basis, I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States.</p> <p>As proposed, this project would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, and the Pacific Northwest.</p> <p>BNSF's proposal could change the built and natural environments, and BNSF's operations would also change as a result, further affecting safe navigability on the lake, emergency response times, rail safety and transportation in the region. In fact, this project could hamper naval submarine operations.</p> <p>Our community, economy, and the surrounding environment depend on maintaining and protecting Lake Pend Oreille and keeping families and businesses along the rail line safe.</p> <p>Please evaluate BNSF's proposal with the same seriousness and concern we have for this issue. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Extend the public comment period by 120 days from the date of the public notice.</li><li>2. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal (APPLICATION NO.: NWW-2007-01303 ) by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Require a full environmental impact statement.</li><li>2. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>
25-Mar-18	<p>Joseph Naidnur has 2 duplicate email letters sent on 3/25/18. I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Extend the public comment period by 120 days from the date of the public notice.</li><li>2. Require a full environmental impact statement.</li><li>3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>

17-Mar-18	<p>I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.</p> <p>The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.</p> <p>In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.</p> <p>And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.</p> <p>Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.</p>

25-Mar-18	<p>Patricia Nazzaro submitted comment on 4/27 that is also represented in this table but only mentions Environmental Impact whereas this comment mentions Environmental Impact and Extending Public Comment Period so is added here. 22-Mar-18	<p>As a citizen of Sandpoint and mother of two, I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States.</p> <p>I would like BNSF to make every effort to decrease pollution into the lake from train traffic.</p> <p>As proposed, this project would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, and the Pacific Northwest.</p> <p>BNSF's proposal could change the built and natural environments, and BNSF's operations would also change as a result, further affecting safe navigability on the lake, emergency response times, rail safety and transportation in the region. In fact, this project could hamper naval submarine operations.</p> <p>Our community, economy, and the surrounding environment depend on maintaining and protecting Lake Pend Oreille and keeping families and businesses along the rail line safe.</p> <p>Please evaluate BNSF's proposal with the same seriousness and concern we have for this issue. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Extend the public comment period by 120 days from the date of the public notice.</li><li>2. Draft a full environmental impact statement.</li><li>3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li><li>4. Conduct at least one public hearing before the environmental impact statement is completed and at least one public hearing after it is released.</li></ol>

One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal (APPLICATION NO.: NWW-2007-01303 ) by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Require a full environmental impact statement.</li><li>2. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>

15-Mar-18	<p>I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.</p> <p>The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.</p> <p>In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.</p> <p>And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.</p> <p>Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.</p>

Require a full environmental impact statement.</li> <li>3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li> </ol>
	<p>I am writing regarding BNSF's proposal to build three new rail bridges in the Sand Creek/Lake Pend Oreille watershed. This includes, among other key project activities, a new bridge across Lake Pend Oreille adjacent to the existing rail bridge, a new bridge over Sand Creek Adjacent to the existing rail bridge, and a new bridge over Bridge Street adjacent to the existing rail bridge.</p> <p>I am respectfully requesting that the Coast Guard perform a Full Environmental Impact Statement (EIS) rather than a less rigorous Environmental Assessment (EA).</p> <p>This proposed railway expansion project would have significant impacts to the Community of Bonner County and to the town of Sandpoint, Idaho - a place of natural beauty which many enjoy and love!</p> <p>Here are my reasons why:</p> <ul style="list-style-type: none"> <li>* Increased transport of hazardous materials through our watershed would mean the possibility of derailment into our waterways and thus threaten our water quality.</li> <li>* Filling wetland areas of the lake for bridge construction can damage sensitive wildlife habitat.</li> <li>* Increased train traffic flow would cause more traffic congestion, not less, as proposed by BNSF.</li> <li>* Increased train traffic could result in more whistle-related noise pollution at rail crossings.</li> <li>* Increased train traffic would impact local businesses, property values and our tourism industry which we rely on.</li> </ul>
27-Apr-18	<p>I support Idaho's requirement for an environmental review of BNSF's proposal to add a second rail bridge over Lake Pend Oreille in Sandpoint, Idaho. I support the Pacific Northwest commitment to renewable resources.</p>

26-Apr-18	<p>I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. 15-Mar-18	<p>I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.</p> <p>The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.</p> <p>In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.</p> <p>And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.</p> <p>Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.</p>

26-Apr-18	<p>I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal (APPLICATION NO.: NWW-2007-01303 ) by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Require a full environmental impact statement.</li><li>2. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>

25-Jun-18	<p>The U.S. Army Corps of Engineers stating "blah, blah, blah" following the section on Public Involvement in its Draft Environmental Assessment for the Carey Creek Shoreline Stabilization Project is troubling to me as an Idahoan and as a US citizen with an interest in our representative agencies taking our concerns seriously. Our community, economy and the surrounding environment depend on protecting Lake Pend Oreille and keeping families and businesses along the rail line safe.</p> <p>This was made clear in a 2008 University of Idaho survey of 267 nearshore property owners on Lake Pend Oreille. According to this survey, property owners place "quite" to "extreme" importance on water quality issues, and homeowners "strongly believe" that the lake needs protecting.*</p> <p>Please evaluate BNSF's proposal to add a second rail bridge across Lake Pend Oreille with the same seriousness and concern we have for this issue. Accordingly, I request the following:</p> <ol style="list-style-type: none"> <li>1. Draft a full environmental impact statement.</li> <li>2. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li> <li>3. Conduct at least one public hearing before the environmental impact statement is completed and at least one public hearing after it is released.</li> </ol> <p>*Coombs, D.M. and N. Sanyal. 2008. "Understanding Shoreline Property Owner's Views on the Water Quality of Lake Pend Oreille." A Report for the Tri-State Water Quality Council. Moscow, ID: University of Idaho.</p>
07-Mar-18	<p>Hello, I am writing to you in regard to the application under review in regard to the new parallel bridge over Lake Pend Oreille in Sandpoint, ID.</p> <p>I am a Coast Guard licensed Captain during the summer months for Lake Pend Oreille Cruises. Our vessel, the "Shawnode", was designed to go under all of the existing bridges, at full pool, on Lake Pend Oreille and the Pend Oreille River. We operate cruises on the lake and all the way down to the Albeni Falls dam.</p> <p>With the existing rail bridge, we can only pass under the bridge, at the three spans on either side of the original turntable location. The other locations along the bridge are too low for safe passage.</p> <p>What I would like to confirm, is that the the new bridge will be at a height that will allow us continued passage. Does the design meet or exceed the current height, at least in the area of the 3 spans on each side of the existing turntable location?</p>

BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.</p> <p>Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.</p>

26-Apr-18	<p>I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal (APPLICATION NO.: NWW-2007-01303 ) by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Require a full environmental impact statement.</li><li>2. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>

26-Mar-18

[NOTE: This individual sent in two comments on 03/26/2018 to the Coast Guard and Steven Fischer]. I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.

BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.

Please evaluate BNSF's proposal by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:

1. Extend the public comment period by 120 days from the date of the public notice.
2. Require a full environmental impact statement.
3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.

01-May-18

On behalf of the Idaho Conservation League, please accept my comments regarding BNSF's Sandpoint Junction Connector project proposal in Bonner County, Idaho. (PDF Attachment follows) Since 1973, the Idaho Conservation League has been Idaho's leading voice for clean water, clean air and wilderness—values that are the foundation for Idaho's extraordinary quality of life. The Idaho Conservation League works to protect these values through public education, outreach, advocacy and policy development. As Idaho's largest state-based conservation organization, we represent over 25,000 supporters, many of whom have a deep personal interest in protecting Idaho's human health and environment. ¶ Attached, please find my comments on behalf of the Idaho Conservation League regarding BNSF's Sandpoint Junction Connector project in Bonner County, Idaho. ¶ Please do not hesitate to contact me at (208) 265-9565 or mnykiel@idahoconservation.org if you have any questions regarding our comments or if we can provide you with any additional information on this matter. [PORTION OF THE COMMENTS FOLLOW. PLEASE SEE THE ORIGINAL COMMENT FOR FULL TEXT.] ¶ Introduction ¶ In our first set of comments submitted on March 7, 2018, we outlined the background of Burlington Northern Santa Fe's (BNSF) Sandpoint Junction Connector project proposal (SJC), the relevant permitting agencies' legal authority, and the scope of potential impacts that could result if this project is approved. We incorporate our March 7, 2018 comments here by reference, to avoid redundancy. The following comments primarily address the U.S. Army Corps of Engineers' (ACOE) regulatory authority and requirements to review, regarding BNSF's SJC project. However, many of our comments apply broadly to the review and analysis required of other federal permitting agencies in this case.

It is our understanding that that U.S. Coast Guard (USCG) intends to open its own public comment period at a later date to inform its National Environmental Policy Act (NEPA) review of the SJC project. We intend to submit additional comments, which will address the USCG's role more specifically, at that time. ¶ Requests ¶ The following comments address several different issues surrounding the permitting processes involved with BNSF's SJC project. We summarize here the specific requests and actions we encourage the ACOE and other permitting agencies to take into consideration:

1. Pursuant to 33 CFR 325.2(d)(4), we request the district engineer advise the other permitting agencies of its position on the Department of Army (DA) permit but defer its final decision, until the USCG has reached a decision on the bridge permit;
2. When reviewing the SJC, we request the ACOE and USCG use a broad scope of analysis that includes an analysis of impacts to all rail line communities along the BNSF rail corridor;
3. We request the ACOE explain the basis of its regulatory action pursuant to Section 404 of the Clean Water Act and the 404(b)(1) Guidelines;
4. We request a detailed analysis of the potential direct, indirect, and cumulative impacts on rail line communities along the BNSF rail corridor that may be impacted by the SJC project;
5. We request that the ACOE and USCG require a single Environmental Impact Statement (EIS);
6. If the ACOE or

06-Mar-18

I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.

The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.

In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.

And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.

Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.

25-Mar-18	<p>[NOTE: This individual sent in two comments on 03/25/2018 to Steven Fischer and the Coast Guard]. Like many folks in the region I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. I understand that one of the bridges will cross the entirety of beautiful Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would surely facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>I'm especially concerned about the threats from potential derailments which keep plaguing our national rail system.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that I'm told would impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. The potential impacts are significant, and can only be reviewed in a thorough and comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I join with others in requesting that you do the following:</p> <ol style="list-style-type: none"> <li>1. Extend the public comment period by 120 days from the date of the public notice.</li> <li>2. Require a full environmental impact statement.</li> <li>3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li> </ol>

12-Mar-18	<p>I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.</p> <p>The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.</p> <p>In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.</p> <p>And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.</p> <p>Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.</p>

26-Apr-18	<p>I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. 07-Mar-18	<p>[Ben Olson has a duplicate email letter dated 2/27/2018] I am writing to express my opposition to a proposal by Burlington Northern Sante Fe to build a second rail bridge over Lake Pend Oreille.</p> <p>Here are my reasons for not wanting this second rail bridge:</p> <ol style="list-style-type: none"> <li>1. There have been so many derailments around the nation lately, be they through infrastructure issues, personnel problems or human error. Just in the Northwest, we had three derailments last year - one with a train carrying coal which spilled into the Clark Fork River. The BNSF site managers explained that coal wasn't a hazardous substance, therefore the derailment and spill wasn't a big deal. While the coal sat there for several weeks awaiting cleanup, it spontaneously combusted several times. If this would have been during the high fire risk season, it would have undoubtedly started a wildfire, not to mention the pollution to our river and lake from the spillage. It's not a question of if it will happen, it's a question of when. I'm not ready to sacrifice our lake's health and our economic dependence on tourism just so BNSF can squeeze a few more trains through per day.</li> <li>2. The second rail bridge would mean more trains coming through Sandpoint. I am not anti-rail - I believe rail traffic is necessary, but we do not need to increase the amount of trains coming through our region. We already average 50-60 trains per day - which amounts to 2 trains per hour.</li> <li>3. A derailment and spillage of oil or any other hazardous chemical into our lake with two trains passing over the lake would cause a catastrophic failure to our lake, which Sandpoint and the surrounding areas depend on for tourism dollars, for recreation and for fishing. A hazardous spill would ruin our town for at least a decade, if not more.</li> <li>4. Gov. Inslee in Washington recently denied the permit for the Longview coal/oil terminal, which BNSF said was the initial reason for their second rail bridge. If there won't be an additional number of these oil/coal cars coming through Sandpoint, the reason for the second rail bridge is now moot.</li> <li>5. BNSF also claims that waiting times at the crossings near the bridge will be reduced because trains will no longer have to sit idle while another train passes over the bridge. Wait times are not that bad now, and they certainly don't warrant building another bridge.</li> </ol> <p>I urge you to not award this second rail bridge permit. I was born and raised in Sandpoint and love this area so much - to jeopardize our lake's health and our town's economy is not worth it.</p> <p>NO to the second rail bridge.</p>

25-Mar-18	<p>I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. 31-Mar-18	<p>Living in a community that is affected by rail transport on a daily basis, I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. ¶ As proposed, this project would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, and the Pacific Northwest. ¶ BNSF's proposal could change the built and natural environments, and BNSF's operations would also change as a result, further affecting safe navigability on the lake, emergency response times, rail safety and transportation in the region. In fact, this project could hamper naval submarine operations. ¶ Our community, economy, and the surrounding environment depend on maintaining and protecting Lake Pend Oreille and keeping families and businesses along the rail line safe. ¶ Please evaluate BNSF's proposal with the same seriousness and concern we have for this issue. Accordingly, I request the following: 1. Extend the public comment period by 120 days from the date of the public notice. 2. Draft a full environmental impact statement. 3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal. 4. Conduct at least one public hearing before the environmental impact statement is completed and at least one public hearing after it is released.</p>
26-Apr-18	<p>I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal (APPLICATION NO.: NWW-2007-01303 ) by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Require a full environmental impact statement.</li><li>2. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>

05-Mar-18	<p>I am writing today to express my strong support for the timely and positive consideration of BNSF Railway's proposed Sandpoint Junction Connector project in northern Idaho. Final approval cannot come too soon for this crucial effort to reduce rail congestion, enhance safety and improve service for shippers in Idaho and throughout the northern tier of states.</p> <p>In light of comments submitted by others in response to the project application, I felt it was important to supplement my March 5, 2018, letter in support of the project (copy attached). Frankly, a lengthy and expensive environmental impact statement process, rather than conducting a more appropriate and timely environmental analysis, would mean unnecessary delays in addressing a critical chokepoint and providing much-needed capacity to a nationally significant freight corridor.</p> <p>BNSF has invested \$2 billion since 2013 to expand capacity on the northern transcontinental route, including construction of more than 150 miles of double track on the corridor. This investment has been driven in part by record demand to move agricultural products by rail. BNSF transported 1.4 million carloads in Idaho last year. Agricultural commodities, consumer products, mixed merchandise and Amtrak trains make up 74 percent of the traffic over Lake Pend Oreille.</p> <p>I am concerned that incorrect information about this project and the rail traffic it supports could cause a delay to the project. The added capacity brought by the Sandpoint project will allow BNSF to provide more reliable service for existing customers and future growth.</p>
05-Mar-18	<p>(NOTE: Gov. Otter has another comment letter dated 4/9/2018 in this matrix.) Please accept this letter expressing my support for the proposed Sandpoint Junction Connector. ¶ Idaho is a merchant state. We produce far more food and fiber than our people can consume. That means we must export much of what we produce to other states and internationally, and in turn we must import many of the tools of production as well as commodities and products not grown or made in Idaho. ¶ Meeting the needs of Idahoans doing business with distant markets throughout America and the world requires safe and efficient rail service. The Sandpoint Junction Connector is part of BNSF Railway's continuing investment in its Idaho infrastructure. The project was announced publicly in 2014. Rail traffic has continued to increase since then, and now it's time to get started upgrading this important rail corridor. ¶ There has been a railroad bridge across Lake Pend Orielle since the early 1900s. And although it has been refurbished three times in the past decade, the bridge no longer provides enough capacity to move freight efficiently. The many Class I and AMTRAK rail lines running across American's northern tier come to a single track across the lake. It has become a chokepoint in need of a solution. Adding a second bridge paralleling BNSF's existing bridge would reduce rail congestion in northern Idaho, resulting in improved timing and throughput of its freight cars. ¶ I also have every confidence that the Army Corps of Engineers and U.S. Coast Guard, together with Idaho's department of Environmental Quality and Lands, will see to it that the law is obeyed. ¶ During the past few years, BNSF Railway has invested more than \$120 million in infrastructure improvements in our state, including several double-tracking projects in northern Idaho. This project will exceed \$100 million. Idaho's shippers and our state's economy will benefit, as will local residents for whom congested rail crossings are a nagging problem. ¶ In short, the project has my wholehearted support. Thank you for your time and positive consideration of BNSF Railway's application to proceed with the Sandpoint Junction Connector.</p>

09-Apr-18

(NOTE: Gov. Otter has another letter dated 3/5/2018 in this matrix.) I am writing today to express my strong support for the timely and positive consideration of BNSF Railway's proposed Sandpoint Junction Connector project in northern Idaho. Final approval cannot come too soon for this crucial effort to reduce rail congestion, enhance safety and improve service for shippers in Idaho and throughout the northern tier of states. ¶ In light comments submitted by others in response to the project application, I felt it was important to supplement my March 5, 2018, letter in support of the project (copy attached). Frankly, a lengthy and expensive environmental impact statement process, rather than conducting a more appropriate and timely environmental analysis, would mean unnecessary delays in addressing a critical chokepoint and provide much-needed capacity to a nationally significant freight corridor. ¶ BNSF has invested \$2 billion since 2013 to expand capacity on the northern transcontinental route, including construction of more than 150 miles of double track on the corridor. This investment has been driven in part by record demand to move agricultural products by rail. BNSF transported 1.4 million carloads in Idaho last year. Agricultural commodities, consumer products, mixed merchandise and Amtrak trains make up 74 percent of the traffic over Lake Pend Oreille. ¶ I am concerned that incorrect information about this project and the rail traffic it supports could cause a delay to the project. The added capacity brought by the Sandpoint project will allow BNSF to provide more reliable service for existing customers and future growth. Freight volumes will be determined by the needs of customers. Through this project, BNSF is ensuring it is prepared to handle those demands today and in the future. ¶ This project is in the interest of all communities and shippers that depend on a robust rail transportation corridor. I am confident your agencies will conduct a thorough review and analysis of the proposal without undue delay.

25-Mar-18

[NOTE: This individual sent in a comment on 03/25/2018 to Steven Fischer]. I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.

BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.

Please evaluate BNSF's proposal by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:

1. Extend the public comment period by 120 days from the date of the public notice.
2. Require a full environmental impact statement.
3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.

25-Mar-18	<p>[NOTE: This individual sent in two comments on 03/25/2018 to Steven Fischer]. I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal by taking a hard look at all the direct, indirect and cumulative impacts of the project. 16-Mar-18	<p>I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.</p> <p>The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.</p> <p>In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.</p> <p>And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.</p> <p>Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.</p>

The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal (APPLICATION NO.: NWW-2007-01303 ) by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Require a full environmental impact statement.</li><li>2. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>

26-Apr-18	<p>[NOTE: This individual sent in another comment on 04/26/2018 to Steven Fischer]. I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. 26-Jun-18	<p>The U.S. Army Corps of Engineers stating "blah, blah, blah" following the section on Public Involvement in its Draft Environmental Assessment for the Carey Creek Shoreline Stabilization Project is troubling to me as a person who has lived in this area for 35 years. All projects need the full regard, respect and consideration when Federal agencies are involved in the review process.</p> <p>The recent crude oil rail derailment disaster in Iowa, dumping "an estimated 230,000 gallons of crude oil into floodwaters, with some making its way to nearby rivers," certainly indicates the very high risk a rail accident would have if this bridge over Lake Pend Oreille were to be built. Right here in Bonner and Boundary Counties in North Idaho rail there have been, at least four significant derailments since spring of 2017.</p> <p>Given the high risk of negative water quality issues with railroad accidents along this body of water, It is concerning to me to propose increasing the traffic over the lake, without a full and complete study of the impacts. This body of water and surrounding area aquifer provides drinking water for over half a million people. I'm concerned that BNSF is not prepared to safely manage additional rail infrastructure in North Idaho.</p> <p>Please evaluate BNSF's proposal to add a second rail bridge across Lake Pend Oreille with the same seriousness and concern we have for this issue.</p> <p>I request the following: PLease,</p> <ol style="list-style-type: none"> <li>1. Require a full environmental impact statement.</li> <li>2. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li> <li>3. Conduct at least one public hearing before the environmental impact statement is completed and at least one public hearing after it is released. Please hold a public hearing in Coeur d Alene as well as in Sandpoint as this will affect the entire North Idaho community.</li> </ol> <p>AS citizens in this area we deserve this process, as we are the ones that will be negatively impacted by this project. I request you do everything to study this thoroughly and be transparent and inclusive. Thank you.</p>

30-Apr-18	<p>Carol Patton has a duplicate email letter sent on 4/30/18. I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal (APPLICATION NO.: NWW-2007-01303 ) by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"> <li>1. Require a full environmental impact statement.</li> <li>2. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li> </ol>

22-Mar-18

I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.

The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.

In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.

And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.

Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.

28-Mar-18

Duplicate: I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.

BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.

Please evaluate BNSF's proposal by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:

1. Extend the public comment period by 120 days from the date of the public notice.
2. Require a full environmental impact statement.
3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.

01-Apr-18	<p>I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. 26-Mar-18	<p>Living in a community that is affected by rail transport on a daily basis, I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. ¶ As proposed, this project would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, and the Pacific Northwest. ¶ BNSF's proposal could change the built and natural environments, and BNSF's operations would also change as a result, further affecting safe navigability on the lake, emergency response times, rail safety and transportation in the region. In fact, this project could hamper naval submarine operations. ¶ Our community, economy, and the surrounding environment depend on maintaining and protecting Lake Pend Oreille and keeping families and businesses along the rail line safe. ¶ Please evaluate BNSF's proposal with the same seriousness and concern we have for this issue. Accordingly, I request the following: 1. Extend the public comment period by 120 days from the date of the public notice. 2. Draft a full environmental impact statement. 3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal. 4. Conduct at least one public hearing before the environmental impact statement is completed and at least one public hearing after it is released. The hearings should focus on all community concerns, and not just single out preferences that align with the motives to build the bridges.</p>

26-Apr-18	<p>I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal (APPLICATION NO.: NWW-2007-01303 ) by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Require a full environmental impact statement.</li><li>2. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>

06-Mar-18	<p>I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.</p> <p>The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.</p> <p>In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.</p> <p>And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.</p> <p>Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.</p>

15-Mar-18

I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.

The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.

In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.

And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.

Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.

30-Mar-18

Amanda Percy has 3 duplicate email letters sent on 3/30/18. I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.

BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.

Please evaluate BNSF's proposal by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:

1. Extend the public comment period by 120 days from the date of the public notice.
2. Require a full environmental impact statement.
3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.

26-Mar-18	<p>[NOTE: This individual sent in two comments 03/26/2018 to Steven Fischer]. I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. 30-Mar-18	<p>Living in a community that is affected by rail transport on a daily basis, I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. ¶ As proposed, this project would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, and the Pacific Northwest. ¶ BNSF's proposal could change the built and natural environments, and BNSF's operations would also change as a result, further affecting safe navigability on the lake, emergency response times, rail safety and transportation in the region. In fact, this project could hamper naval submarine operations. ¶ Our community, economy, and the surrounding environment depend on maintaining and protecting Lake Pend Oreille and keeping families and businesses along the rail line safe. ¶ Please evaluate BNSF's proposal with the same seriousness and concern we have for this issue. Accordingly, I request the following: 1. Extend the public comment period by 120 days from the date of the public notice. 2. Draft a full environmental impact statement. 3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal. 4. Conduct at least one public hearing before the environmental impact statement is completed and at least one public hearing after it is released.</p>

One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Extend the public comment period by 120 days from the date of the public notice.</li><li>2. Require a full environmental impact statement.</li><li>3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>

26-Apr-18	<p>I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. 15-Mar-18	<p>I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.</p> <p>The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.</p> <p>In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.</p> <p>And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.</p> <p>Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.</p>
26-Apr-18	<p>Duplicate: I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>
25-Mar-18	<p>[NOTE: This individual sent in two comments on 03/25/2018 to Steven Fischer]. I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Extend the public comment period by 120 days from the date of the public notice.</li><li>2. Require a full environmental impact statement.</li><li>3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>

30-Apr-18	<p>Carole Plourde has a duplicate email letter sent on 4/30/18. I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal (APPLICATION NO.: NWW-2007-01303 ) by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following: 1. Require a full environmental impact statement. 2. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</p>
20-Mar-18	<p>Living in a community that is affected by rail transport on a daily basis, I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States.</p> <p>As proposed, this project would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, and the Pacific Northwest.</p> <p>BNSF's proposal could change the built and natural environments, and BNSF's operations would also change as a result, further affecting safe navigability on the lake, emergency response times, rail safety and transportation in the region. In fact, this project could hamper naval submarine operations.</p> <p>Our community, economy, and the surrounding environment depend on maintaining and protecting Lake Pend Oreille and keeping families and businesses along the rail line safe.</p> <p>Please evaluate BNSF's proposal with the same seriousness and concern we have for this issue. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Extend the public comment period by 120 days from the date of the public notice.</li><li>2. Draft a full environmental impact statement.</li><li>3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li><li>4. Conduct at least one public hearing before the environmental impact statement is completed and at least one public hearing after it is released.</li></ol>

25-Mar-18	<p>[NOTE: This individual sent in two comments on 03/25/2018 to Steven Fischer and the Coast Guard]. I am extremely concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Extend the public comment period by 120 days from the date of the public notice.</li><li>2. Require a full environmental impact statement.</li><li>3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>
26-Mar-18	<p>There are 3 identical comments.</p> <p>I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. Comments received by USACE/IDL in response to PN for Application  
NWW-2007-01303 (2/26/2018)

USCG0034913/27

06-Mar-18	<p>I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.</p> <p>The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.</p> <p>In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.</p> <p>And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.</p> <p>Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.</p>

Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.</p> <p>In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.</p> <p>And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.</p> <p>Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.</p>
26-Apr-18	<p>Duplicate: I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal (APPLICATION NO.: NWW-2007-01303 ) by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Require a full environmental impact statement.</li><li>2. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>

15-Mar-18

I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.

The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.

In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.

And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.

Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.

Submitted 3 times.

I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.

BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.

Please evaluate BNSF's proposal by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:

1. Extend the public comment period by 120 days from the date of the public notice.
2. Require a full environmental impact statement.
3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.

27-Apr-18	<p>I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal (APPLICATION NO.: NWW-2007-01303 ) by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Require a full environmental impact statement.</li><li>2. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>

<p>30-Apr-18</p>	<p>Please find attached comments from the Montana Grain Growers Association regarding the Application for Permit No.: NWW-2007-01303. PDF attachment (dated 4/23/2018) -- Please include this letter from the Montana Grain Growers Association in your record of public comments regarding BNSF Railway's proposal for bridge expansion over Lake Pend Oreille. We are strongly supportive of this project, and request that the permitting process be streamlined wherever possible. ¶ In fact, this bridge project is important to agriculture in a large portion of the United States, from North Dakota to Kansas and from Washington to Minnesota, and beyond. Due to the nature of global commodity markets, shipping costs and restraints have a profound effect on our farmers' receipts for their produce. ¶ Montana is a state with vast resources and few consumers. We rely on long-distance transport of our goods for delivery to our customers. Eighty percent of our wheat crop is exported, and most of that traverses Lake Pend Oreille. We cannot overstate our interest in eliminating the bottleneck created by a single lane bridge. ¶ BNSF Railway has been making great strides towards increasing the efficiency of its northern route, known in Montana as the HiLine. They have invested millions in upgrades over the past 5 years, and we are impressed with their commitment to efficient service. Their willingness to invest in Idaho track should be applauded. ¶ Imagine the frustration and efficiency if everyone who takes a passing interest in this project were to encounter a single lane bridge on their drive to work each day. We think the public would ask, "How soon can we fix this?" rather than "Should we fix this?" ¶ The Sandpoint Junction Connector project makes sense to Montana Grain Growers, and we ask that you, your Corps, and all the other entities with an interest in this, work together to get the permitting process expeditious.</p>

15-Mar-18	<p>I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.</p> <p>The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.</p> <p>In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.</p> <p>And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.</p> <p>Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.</p>

12-Mar-18

I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.

The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.

In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.

And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.

Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.

25-Mar-18

I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.

BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.

Please evaluate BNSF's proposal by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:

1. Extend the public comment period by 120 days from the date of the public notice.
2. Require a full environmental impact statement.
3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.

21-Mar-18	<p>Living in a community that is affected by rail transport on a daily basis, I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States.</p> <p>As proposed, this project would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, and the Pacific Northwest.</p> <p>BNSF's proposal could change the built and natural environments, and BNSF's operations would also change as a result, further affecting safe navigability on the lake, emergency response times, rail safety and transportation in the region. In fact, this project could hamper naval submarine operations.</p> <p>Our community, economy, and the surrounding environment depend on maintaining and protecting Lake Pend Oreille and keeping families and businesses along the rail line safe.</p> <p>Please evaluate BNSF's proposal with the same seriousness and concern we have for this issue. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Extend the public comment period by 120 days from the date of the public notice.</li><li>2. Draft a full environmental impact statement.</li><li>3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li><li>4. Conduct at least one public hearing before the environmental impact statement is completed and at least one public hearing after it is released.</li></ol>
