26-Apr-18	<p>I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal (APPLICATION NO.: NWW-2007-01303 ) by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Require a full environmental impact statement.</li><li>2. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>

16-Mar-18	<p>I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.</p> <p>The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.</p> <p>In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.</p> <p>And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.</p> <p>Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.</p>

20-Mar-18	<p>Living in a community that is affected by rail transport on a daily basis, I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States.</p> <p>As proposed, this project would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, and the Pacific Northwest.</p> <p>BNSF's proposal could change the built and natural environments, and BNSF's operations would also change as a result, further affecting safe navigability on the lake, emergency response times, rail safety and transportation in the region. In fact, this project could hamper naval submarine operations.</p> <p>Our community, economy, and the surrounding environment depend on maintaining and protecting Lake Pend Oreille and keeping families and businesses along the rail line safe.</p> <p>Please evaluate BNSF's proposal with the same seriousness and concern we have for this issue. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Extend the public comment period by 120 days from the date of the public notice.</li><li>2. Draft a full environmental impact statement.</li><li>3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li><li>4. Conduct at least one public hearing before the environmental impact statement is completed and at least one public hearing after it is released.</li></ol>

I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.

The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.

In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.

And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.

Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.

27-Mar-18

[NOTE: This individual sent in another comment on 03/27/2018 to Steven Fischer]. I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.

BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.

Please evaluate BNSF's proposal by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:

1. Extend the public comment period by 120 days from the date of the public notice.
2. Require a full environmental impact statement.
3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.

26-Mar-18	<p>duplicate: I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. 18-Mar-18

I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.

The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.

In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.

And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.

Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.

[NOTE: This individual sent in two comments on 03/25/2018 to Steven Fischer]. I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.

BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.

Please evaluate BNSF's proposal by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:

1. Extend the public comment period by 120 days from the date of the public notice.
2. Require a full environmental impact statement.
3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.

Please do NOT allow the fossil fuel industry to destroy more and more and more and more of this country's waterways just so that the over-privileged, extremely wealthy oil barons can continue to enrich themselves at the expense of our environment, our planet and our lives. This has got to stop.

26-Apr-18	<p>Duplicate: I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.</p> <p>And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.</p> <p>Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.</p>

20-Mar-18	<p>Dear U.S. Coast Guard and Army Corps of Engineers,</p> <p>Living in a community that is affected by rail transport on a daily basis, I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States.</p> <p>As proposed, this project would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, and the Pacific Northwest.</p> <p>BNSF's proposal could change the built and natural environments, and BNSF's operations would also change as a result, further affecting safe navigability on the lake, emergency response times, rail safety and transportation in the region. In fact, this project could hamper naval submarine operations.</p> <p>Our community, economy, and the surrounding environment depend on maintaining and protecting Lake Pend Oreille and keeping families and businesses along the rail line safe.</p> <p>Please evaluate BNSF's proposal with the same seriousness and concern we have for this issue. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Extend the public comment period by 120 days from the date of the public notice.</li><li>2. Draft a full environmental impact statement.</li><li>3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li><li>4. Conduct at least one public hearing before the environmental impact statement is completed and at least one public hearing after it is released.</li></ol>
26-Apr-18	<p>I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. 26-Apr-18

I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.

BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.

Please evaluate BNSF's proposal (APPLICATION NO.: NWW-2007-01303 ) by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:

1. Require a full environmental impact statement.
2. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.

I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.

BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.

Please evaluate BNSF's proposal (APPLICATION NO.: NWW-2007-01303 ) by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:

1. Require a full environmental impact statement.
2. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.

26-Apr-18	<p>As you may be aware, the Sandpoint Junction Connector Project is part of the BNSF Great Northern Corridor, which is nationally significant and allows the transportation of vital freight and passengers from the Great Lakes to the Pacific Northwest. Many farmers, miners, ranchers, manufacturers, energy producers, lumber businesses, and Amtrak trains rely on the successful operation of this corridor. As such, I believe timely consideration of this project will benefit all communities connected to BNSF rail operations. ¶ In addition to national benefits, the Sandpoint Junction Connector Project will benefit northern Idaho through a reduction in congestion and safer operation of train junctions. When completed, trains will run in both directions across the bridge, reducing the need for trains to stop as they wait for clearance to cross. Because of this, Idaho drivers could see shorter wait times on nearby roads as this expansion will enable a more fluid flow of rail and road traffic. ¶ BNSF has committed to the safety of the Sandpoint region, completing detailed plans on shipping commodities through the environmentally sensitive regions of northern Idaho. Timely approval for this project would benefit northern Idaho and all the businesses and communities who benefit from the BNSF Great Northern Corridor. ¶ It is crucial that freight on the BNSF rail system is able to move efficiently and safely, which is why I urge the U.S. Coast Guard and the U.S. Army Corps of Engineers to give the Sandpoint Junction Connector Project timely consideration.</p>

16-Mar-18	<p>I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.</p> <p>The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.</p> <p>In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.</p> <p>And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.</p> <p>Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.</p>

16-Mar-18

I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.

The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.

In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.

And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.

Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.

26-Apr-18	<p>[NOTE: This individual sent in another comment on 04/26/2018 to the Coast Guard]. I live on the central Oregon coast and I support the prevention of coal and, especially, oil "bomb" trains from being allowed to transport their dangerous cargo to Northwestern ports for shipment overseas. So far, here in the Northwest, we have been successful in preventing many of these proposed fossil fuel shipping terminals from being built.</p> <p>Now, BNSF wants to add a second rail bridge over Lake Pend Oreille in Sandpoint, Idaho. The new rail bridge would facilitate more fossil fuel trains to existing and future terminals along the West Coast, which is a terrible environmental as well as Climate Change threat to the Pacific Northwest and to the offshore ports that are the targeted points of receipt and distribution for these toxic fuels.</p> <p>Please do not allow this to happen!</p>

26-Mar-18	<p>There are 3 identical comments.</p> <p>I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. Comments received by USACE/IDL in response to PN for Application  
NWW-2007-01303 (2/26/2018)

USCG0035753/27

03-May-18

[NOTE: Rognstad also has a letter dated 3/13/2018] I am writing to share our community's interest in the potential impacts of BNSF Railway's proposal to construct a series of railroad bridges through and nearby Sandpoint, Idaho. One of these bridges would span nearly a mile across Lake Pend Oreille, Idaho's largest lake. ¶ Many communities in North Idaho were born with the railroads and have embraced railroads as an integral part of our regional identity. However, projects like BNSF's Sandpoint Junction Connector are being proposed in anticipation of an estimated near doubling of rail traffic by 2035. Included in this rail traffic, which will travel through the city of Sandpoint and other communities in Bonner County, will be numerous trains carrying hazardous materials, coal, and crude oil. In 2016, three railroads in our county transported significantly more than 300,000 rail cars or tank cars containing various forms of hazardous materials and crude oil. And, as of 2017, approximately 24 unit trains per week carrying crude oil from the Bakken oil fields in the Dakotas and Saskatchewan travel through Sandpoint. This is significant given that in the spring of 2017, at least four significant derailments occurred in Bonner and Boundary Counties near waterways. Our community is interested in how BNSF's Sandpoint Junction Connector proposal and any potential increase in rail traffic, particularly hazardous materials and crude oil, will impact families and businesses in Sandpoint. ¶ The U.S. Coast Guard (USCG) is the lead federal agency evaluating BNSF's Sandpoint Junction Connector proposal, and the USCG has the authority and obligation to implement the legal requirements pursuant to the National Environmental Policy Act (NEPA). In addition to NEPA, the USCG will also be evaluating BNSF's proposal according to its permitting authority pursuant to the General Bridge Act of 1946. The U.S. Army Corps of Engineers (USACE) is evaluating BNSF's proposal as a cooperating agency, and the USACE will evaluate the proposal according to its authority pursuant to Section 404 of the Clean Water Act. ¶ BNSF's Sandpoint Junction Connector proposal is anticipated to cost over \$100 million and construction of the project is estimated to last at least 3 years. Given estimates predicting that rail traffic will nearly double by 2035 and given the equipment, training, evacuation, procedural, and geographic vulnerabilities identified in the 2017 Lake Pend Oreille and Pend Oreille River Geographic Response Plan, our communities deserve an opportunity to understand the potential impacts of this proposal and anticipated increases in rail traffic. Among our concerns are: • Safety concerns raised by the increased traffic congestion at crossings and the delay of emergency vehicles; • Potential increased tax burden on local communities needing to improve crossings and prepare for potential spills, derailments and other emergencies. It is our understanding that railroads only contribute 5% of the cost when an at-grade crossing is replaced by an under or overpass. • Potential issues caused by fugitive coal dust and/or diesel particulates that may contribute to public health impacts, derailments, and pollution of Idaho waters by coal falling from railcars; • Neither the USCG nor the USACE has required BNSF to produce an Environmental Impact Statement pursuant to NEPA for its Sandpoint Junction Connector proposal. We are concerned that the USCG may authorize BNSF's proposal without considering the full scope of significant impacts to our communities. ¶ As Mayor of Sandpoint, I urge: 1. The USCG to require BNSF Railway produce an Environmental Impact Statement analyzing the full scope of direct

30-Mar-18

I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.

BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.

Please evaluate BNSF's proposal by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:

1. Extend the public comment period by 120 days from the date of the public notice.
2. Require a full environmental impact statement.
3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.

20-Mar-18

Living in a community that is affected by rail transport on a daily basis, I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States.

As proposed, this project would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, and the Pacific Northwest.

BNSF's proposal could change the built and natural environments, and BNSF's operations would also change as a result, further affecting safe navigability on the lake, emergency response times, rail safety and transportation in the region. In fact, this project could hamper naval submarine operations.

Our community, economy, and the surrounding environment depend on maintaining and protecting Lake Pend Oreille and keeping families and businesses along the rail line safe.

Please evaluate BNSF's proposal with the same seriousness and concern we have for this issue. Accordingly, I request the following:

1. Extend the public comment period by 120 days from the date of the public notice.
2. Draft a full environmental impact statement.
3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.
4. Conduct at least one public hearing before the environmental impact statement is completed and at least one public hearing after it is released.

26-Jun-18

The U.S. Army Corps of Engineers stating "blah, blah, blah" following the section on Public Involvement in its Draft Environmental Assessment for the Carey Creek Shoreline Stabilization Project is troubling to me as a local who lives in this area and has concerns about projects being reviewed by federal agencies.

Railroad accidents are common in North Idaho. In the spring of 2017, at least four significant derailments occurred in Bonner and Boundary counties near waterways.\*

Given the proclivity for railroad accidents along water that our community depends on, I'm concerned that BNSF is not prepared to safely manage additional rail infrastructure in North Idaho.

Please evaluate BNSF's proposal to add a second rail bridge across Lake Pend Oreille with the same seriousness and concern we have for this issue. Accordingly, I request the following:

1. Draft a full environmental impact statement.
2. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.
3. Conduct at least one public hearing before the environmental impact statement is completed and at least one public hearing after it is released.

\*2017 Lake Pend Oreille and Pend Oreille River Geographic Response Plan at page 30.

13-Mar-18

I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.

The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.

In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.

And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.

Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.

28-Apr-18	<p>Rachel Rose has a duplicate email letter sent on 4/28/18. I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal (APPLICATION NO.: NWW-2007-01303 ) by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Require a full environmental impact statement.</li><li>2. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>
21-Mar-18	<p>I am writing about the proposed new railroad bridge crossing Lake Pend Oreille near Sandpoint , Idaho. I live in neighboring Boundary County. Our county is very much affected by the beautiful resort town of Sandpoint. Not only do we enjoy spending time around Lake Pend Oreille but our communities growth stems partly from a overflow from Bonner County. If an environmental disaster occurred on Lake Pend Oreille then then it would affect all of North Idaho and the Spokane region as well.</p> <p>Please evaluate BNSF's proposal with the same seriousness and concern we have for this issue. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Extend the public comment period by 120 days from the date of the public notice.</li><li>2. Draft a full environmental impact statement.</li><li>3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li><li>4. Conduct at least one public hearing before the environmental impact statement is completed and at least one public hearing after it is released.</li></ol>

07-Mar-18	<p>I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.</p> <p>The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.</p> <p>In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.</p> <p>And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.</p> <p>Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.</p>
26-Apr-18	<p>I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. 27-Apr-18

As you make your decisions, please think of your children and your children's children. Do you want your descendants' future to include another bridge for oil trains or do you want to increase the chance that your descendants will have sufficient clean water? Your and my grandparents and great grandparents did not have to consider such questions because during the Industrial Revolution and for a few decades thereafter, it seemed the Earth had an endless and inexhaustible supply of clean water. But it is now alarmingly clear that human beings have polluted, contaminated and/or are using up virtually every fresh water drinking source on Earth. During the next 80 years as climate change caused extreme weather events and rising seas force millions of Americans from their present homes, those Americans will move to places that still have drinkable water. Those remaining water sources will rapidly become inadequate to meet the increased need. The first responsibility of every public official is to protect and defend public health and safety. There is nothing more essential for public health and safety than clean water. So I ask that you please require a full EIS statement and fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal. BNSF's proposal to construct a series of bridges in Bonner County, Idaho is very concerning for numerous reasons. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region and indeed where I live in Whatcom County, Washington State. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.

BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.

Please evaluate BNSF's proposal (APPLICATION NO.: NWW-2007-01303 ) by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:

1. Require a full environmental impact statement.
2. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.

16-Mar-18	<p>I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.</p> <p>The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.</p> <p>In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.</p> <p>And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.</p> <p>Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.</p>

I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.

BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.

Please evaluate BNSF's proposal by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:

25-Mar-18

1. Extend the public comment period by 120 days from the date of the public notice.

2. Require a full environmental impact statement.

3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.

Please evaluate BNSF's proposal by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:

1. Extend the public comment period by 120 days from the date of the public notice.

2. Require a full environmental impact statement.

3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.

04-May-28	<p>Enclosed are our comments for support of the Sandpoint Junction Connector project. PDF attachment -- On behalf of our boards and all of the growers and industry members of our coalition, I am writing to affirm our support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval. ¶ The USA Dry Pea and Lentil Council and US Pea and Lentil Trade Association represents the entire pulse value chain; from the farm production to domestic use and foreign export. A vast majority of our harvest from ID, WA, ND, SD and MT moves via rail across this corridor. This project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille -- when completed -- would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region. ¶ And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. In reality, rail is the only cost-effective way [to] transport agricultural commodities into the export market. Rail is among the safest and environmentally friendly ways to ship commodities. ¶ Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice our support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.</p>

One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Extend the public comment period by 120 days from the date of the public notice.</li><li>2. Require a full environmental impact statement.</li><li>3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>

13-Mar-18	<p>I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.</p> <p>The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.</p> <p>In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.</p> <p>And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.</p> <p>Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.</p>

26-Apr-18	<p>I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Extend the public comment period by 120 days from the date of the public notice.</li><li>2. Require a full environmental impact statement.</li><li>3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>
25-Mar-18	<p>I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal (APPLICATION NO.: NWW-2007-01303 ) by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Require a full environmental impact statement.</li><li>2. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>
19-Mar-18	<p>I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.</p> <p>The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.</p> <p>In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.</p> <p>And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.</p> <p>Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.</p>

16-Mar-18	<p>I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.</p> <p>The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.</p> <p>In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.</p> <p>And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.</p> <p>Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.</p>

12-Apr-18	<p>Living in a community that is affected by rail transport (58 trains at present) on a daily basis, I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. ¶ As proposed, this project would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, and the Pacific Northwest. ¶ BNSF's proposal could change the built and natural environments, and BNSF's operations would also change as a result, further affecting safe navigability on the lake, emergency response times, rail safety and transportation in the region. In fact, this project could hamper naval submarine operations. ¶ Our community, economy, and the surrounding environment depend on maintaining and protecting Lake Pend Oreille and keeping families and businesses along the rail line safe. In fact, Lake Pend Oreille is a significant tourism draw which contributes to our economy. Keeping it clean and healthy is essential to our community. ¶ Please evaluate BNSF's proposal with the same seriousness and concern we have for this issue. Accordingly, I request the following: 1. Draft a full environmental impact statement. 2. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal. 3. Conduct at least one public hearing before the environmental impact statement is completed and at least one public hearing after it is released.</p>
26-Apr-18	<p>I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>Since there were 5 derailments in 2017 alone-any derailment occurring over a major water source would have catastrophic effects to millions of people who rely on that water source and also any recreation-fishing, boating, swimming, etc would be terminated due to contaminated water.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal (APPLICATION NO.: NWW-2007-01303 ) by taking a hard look at all the direct, indirect and cumulative impacts of the project. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.</p> <p>Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.</p>
30-Apr-18	<p>Jeanne Schlatter has a duplicate email letter sent on 4/30/18. I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal (APPLICATION NO.: NWW-2007-01303 ) by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following: 1. Require a full environmental impact statement. 2. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</p>

15-Mar-18	<p>I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.</p> <p>The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.</p> <p>In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.</p> <p>And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.</p> <p>Sandpoint is a model proposal in many regards with significant support. 28-Apr-18

Janice Schuch has a duplicate email letter sent on 4/28/18. I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.

BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.

Please evaluate BNSF's proposal (APPLICATION NO.: NWW-2007-01303 ) by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:

1. Require a full environmental impact statement.
2. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.
3. Considering in this study that NO more oil tankers can travel in the Salish Sea (Puget Sound), so any shipping terminal will be South of Idaho and this bridge is not needed.

25-Mar-18

I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"> <li>1. Extend the public comment period by 120 days from the date of the public notice.</li> <li>2. Require a full environmental impact statement.</li> <li>3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li> </ol>
26-Mar-18	<p>I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"> <li>1. Extend the public comment period by 120 days from the date of the public notice.</li> <li>2. Require a full environmental impact statement.</li> <li>3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li> <li>4. WATER has become a world wide crisis concern. Any chance of such a threat to regional drinking water supplies is of GRAVE concern for humanity. They need to be protected - forever is a pretty long time. As it is we are perfecting ways of cleaning up and protecting finite sources. The human body is at least 80% water, it is vital to ALL.</li> </ol>

21-Mar-18	<p>Living in a community that is affected by rail transport on a daily basis, I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States.</p> <p>As proposed, this project would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, and the Pacific Northwest.</p> <p>BNSF's proposal could change the built and natural environments, and BNSF's operations would also change as a result, further affecting safe navigability on the lake, emergency response times, rail safety and transportation in the region. In fact, this project could hamper naval submarine operations.</p> <p>Our community, economy, and the surrounding environment depend on maintaining and protecting Lake Pend Oreille and keeping families and businesses along the rail line safe.</p> <p>Please evaluate BNSF's proposal with the same seriousness and concern we have for this issue. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Extend the public comment period by 120 days from the date of the public notice.</li><li>2. Draft a full environmental impact statement.</li><li>3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li><li>4. Conduct at least one public hearing before the environmental impact statement is completed and at least one public hearing after it is released.</li></ol>

15-Mar-18	<p>I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.</p> <p>The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.</p> <p>In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.</p> <p>And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.</p> <p>Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.</p>
26-Apr-18	<p>I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal (APPLICATION NO.: NWW-2007-01303 ) by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Require a full environmental impact statement.</li><li>2. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>

26-Apr-18	<p>I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal (APPLICATION NO.: NWW-2007-01303 ) by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Require a full environmental impact statement.</li><li>2. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>

29-Mar-18	<p>Living in a community that is affected by rail transport on a daily basis, I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. ¶ As proposed, this project would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, and the Pacific Northwest. ¶ BNSF's proposal could change the built and natural environments, and BNSF's operations would also change as a result, further affecting safe navigability on the lake, emergency response times, rail safety and transportation in the region. In fact, this project could hamper naval submarine operations. ¶ Our community, economy, and the surrounding environment depend on maintaining and protecting Lake Pend Oreille and keeping families and businesses along the rail line safe. ¶ Please evaluate BNSF's proposal with the same seriousness and concern we have for this issue. Accordingly, I request the following: 1. Extend the public comment period by 120 days from the date of the public notice. 2. Draft a full environmental impact statement. 3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal. 4. Conduct at least one public hearing before the environmental impact statement is completed and at least one public hearing after it is released.</p>

19-Mar-18	<p>I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.</p> <p>The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.</p> <p>In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.</p> <p>And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.</p> <p>Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.</p>

I affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval. The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.

In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.

And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.

Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.

26-Apr-18

[NOTE: This individual sent in another comment on 04/26/2018 to Steven Fischer]. I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.

BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.

Please evaluate BNSF's proposal (APPLICATION NO.: NWW-2007-01303 ) by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:

1. Require a full environmental impact statement.
2. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.

There are 3 identical comments.

I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.

BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.

Please evaluate BNSF's proposal by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:

1. Extend the public comment period by 120 days from the date of the public notice.
2. Require a full environmental impact statement.
3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.

21-Apr-18	<p>Please accept my comments on the proposed BNSF Sandpoint Connector Proposal. [Pdf attachment follows] ¶</p> <p>Please accept the following comments for the record and my sincere hope and belief that they are reviewed and valued by the decision makers involved in shaping the final decision and outcome of the proponent for this application. I will try to be succinct in my explanation of my thoughts but in some instances a complex problem will require a longer explanation of my thoughts and suggestions, for this I appreciate your indulgence.</p> <p>I believe a more robust analysis of the alternatives available for BNSF Sandpoint Junction Connector is needed, if that results in a decision for a full EIS, then I am in support of that. In the Alternative Analysis prepared by Jacobs Engineering starting at page 67 of the application, the only alternatives actually considered practical were for the east or west side of the existing bridge. Two other alternatives were given lip service in the report but by admission in the report were not seriously considered. It would seem that a number of other alternatives should have been considered, among them: 1. Parallel track construction in other parts of the track system from Bonners Ferry to Rathdrum. Logic would explain that any place single line main track exists will cause system bottle necks and delays due to trains needing to pass going different directions. Is the construction of the parallel tracks in the City of Sandpoint and over Lake Pend Oreille the only place that system efficiency can be gained? I am quite sure that many more miles of parallel tracks could be installed on solid ground compared to building miles of bridges for the same money.</p> <p>2. How about taking a bigger overall view? Currently two main line tracks are operated by two railroads (BNSF &amp; Union Pacific) between Bonners Ferry, Spokane and points west. Is there a way that coordinated operations (I suspect that track sharing treaties have existed for years between the various operators) of these two main lines that would allow each line to be designated as one way traffic (east/west)? Probably some connector switching and other items of improvement would be required but overall the tracks already are in place and system efficiency would be best served with full parallel tracks. Certainly, if this was cleverly put together, the overall positive impacts of the reduction of train operations at grade crossings in the greater Sandpoint area would be very helpful from both an efficiency and annoyance perspective.</p> <p>There well maybe other alternatives that should be evaluated, I only make these suggestions as an untrained lay person.</p> <p>I have several other concerns that for the bridges as proposed regarding the following:</p> <ol style="list-style-type: none"> <li>1. The pile driving for the piling envisions over 500,000 strikes on the pilings. No provisions are included for sound attenuation. The proponent is proposing this for occurring over a three year period and that the community should just accept this level of sound invasion.</li> <li>2. What happens to the pilings that are placed for the temporary work bridge at completion?</li> <li>3. What is the interim construction and long term impacts on the Dog Beach recreation area between the BNSF Bridge and the Highway 95 Long Bridge at the north end of the two bridges?</li> <li>4. There has been no discussion in the proposal about the entire rail corridor from Sagle past the Schweitzer</li> </ol>

13-Mar-18	<p>I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.</p> <p>The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.</p> <p>In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>

25-Mar-18	<p>[NOTE: This individual sent in two comments on 03/25/2018 to Steven Fischer]. I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Extend the public comment period by 120 days from the date of the public notice.</li><li>2. Require a full environmental impact statement.</li><li>3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>

26-Mar-18	<p>Living in a state that is affected by rail transport on a daily basis, I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. ¶ As proposed, this project would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, and the Pacific Northwest. ¶ BNSF's proposal could change the built and natural environments, and BNSF's operations would also change as a result, further affecting safe navigability on the lake, emergency response times, rail safety and transportation in the region. In fact, this project could hamper naval submarine operations. ¶ Our community, economy, and the surrounding environment depend on maintaining and protecting Lake Pend Oreille and keeping families and businesses along the rail line safe. ¶ Please evaluate BNSF's proposal with the same seriousness and concern we have for this issue. Accordingly, I request the following: 1. Extend the public comment period by 120 days from the date of the public notice. 2. Draft a full environmental impact statement. 3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal. 4. Conduct at least one public hearing before the environmental impact statement is completed and at least one public hearing after it is released.</p>

These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal (APPLICATION NO.: NWW-2007-01303 ) by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Require a full environmental impact statement.</li><li>2. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>

25-Mar-18	<p>I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Extend the public comment period by 120 days from the date of the public notice.</li><li>2. Require a full environmental impact statement.</li><li>3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>
25-Mar-18	<p>[NOTE: This individual sent in two comments on 03/25/2018 to Steven Fischer]. I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. 15-Mar-18

I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.

The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.

In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.

And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.

Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.

27-Mar-18	<p>Living in a community that is affected by rail transport on a daily basis, I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. ¶ As proposed, this project would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, and the Pacific Northwest. ¶ BNSF's proposal could change the built and natural environments, and BNSF's operations would also change as a result, further affecting safe navigability on the lake, emergency response times, rail safety and transportation in the region. In fact, this project could hamper naval submarine operations. ¶ Our community, economy, and the surrounding environment depend on maintaining and protecting Lake Pend Oreille and keeping families and businesses along the rail line safe. ¶ Please evaluate BNSF's proposal with the same seriousness and concern we have for this issue. Accordingly, I request the following: 1. Extend the public comment period by 120 days from the date of the public notice. 2. Draft a full environmental impact statement. 3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal. 4. Conduct at least one public hearing before the environmental impact statement is completed and at least one public hearing after it is released.</p>

28-Apr-18	<p>Donna Smith has a duplicate email letter sent on 4/28/18. I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal (APPLICATION NO.: NWW-2007-01303 ) by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Require a full environmental impact statement.</li><li>2. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>

By improving the efficiency of the line, this will also increase the safety of train traffic in the region.</p> <p>And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.</p> <p>Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.</p>

26-Mar-18	<p>There are 3 identical comments.</p> <p>I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Extend the public comment period by 120 days from the date of the public notice.</li><li>2. Require a full environmental impact statement.</li><li>3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>

20-Mar-18	<p>I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.</p> <p>The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.</p> <p>In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.</p> <p>And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. 15-Mar-18	<p>I strongly support the Sandpoint Junction Connector project and hope you will approve construction permits expeditiously. It's a worthwhile project that will not only help the environment by reducing idling trains, but improve mobility both for rail shippers and local motorists who must wait now for trains queued up for the current single-track bridge. It's also worth mentioning every loaded railcar takes 4 or 5 trucks off our roadways, significantly reducing public maintenance costs there - we should thus encourage rail investment wherever possible.</p> <p>Hundreds of northwest industries depend on a fluid, predictable transportation network to get their goods to market. I'm appreciative that private firms like BNSF and UP and others are willing to invest millions of dollars annually to keep the rail network healthy.</p> <p>Thank you for listening.</p>

28-Apr-18	<p>Nora Sotomayor has a duplicate email letter sent on 4/28/18. I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Extend the public comment period by 120 days from the date of the public notice.</li><li>2. Require a full environmental impact statement.</li><li>3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>
26-Apr-18	<p>I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal (APPLICATION NO.: NWW-2007-01303 ) by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Require a full environmental impact statement.</li><li>2. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>

02-Apr-18	<p>[NOTE: This individual sent in two comments on 04/02/2018 to Steven Fischer]. I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. 16-Mar-18	<p>I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.</p> <p>The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.</p> <p>In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.</p> <p>And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.</p> <p>Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.</p>

01-Apr-18	<p>I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Extend the public comment period by 120 days from the date of the public notice.</li><li>2. Require a full environmental impact statement.</li><li>3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>
26-Apr-18	<p>I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal (APPLICATION NO.: NWW-2007-01303 ) by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Require a full environmental impact statement.</li><li>2. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>

16-Mar-18	<p>I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.</p> <p>The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.</p> <p>In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.</p> <p>And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.</p> <p>Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.</p>

16-Mar-18

I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.

The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.

In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.

And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.

Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.

26-Apr-18

I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.

The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.

In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.

And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.

Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.

BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.</p> <p>Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.</p>

26-Apr-18	<p>Duplicate: I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal (APPLICATION NO.: NWW-2007-01303 ) by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Require a full environmental impact statement.</li><li>2. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>

I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.

The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.

In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.

And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.

Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.

These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal (APPLICATION NO.: NWW-2007-01303 ) by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Require a full environmental impact statement.</li><li>2. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>

25-Mar-18	<p>I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Extend the public comment period by 120 days from the date of the public notice.</li><li>2. Require a full environmental impact statement.</li><li>3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>
30-Mar-18	<p>[NOTE: This individual sent in three comments on 03/30/2018 to Steven Fischer and the Coast Guard]. I am very dismayed to learn about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would adversely impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed through the process of a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Extend the public comment period by 120 days from the date of the public notice.</li><li>2. Require a full environmental impact statement.</li><li>3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>

12-Mar-18	<p>I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.</p> <p>The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.</p> <p>In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.</p> <p>And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.</p> <p>Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.</p>

Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Require a full environmental impact statement.</li><li>2. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>
26-Apr-18	<p>I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal (APPLICATION NO.: NWW-2007-01303 ) by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Require a full environmental impact statement.</li><li>2. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>

16-Mar-18	<p>I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.</p> <p>The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.</p> <p>In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.</p> <p>And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.</p> <p>Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.</p>

20-Mar-18

I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.

The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.

In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.

And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.

Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.

27-Apr-18

I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.

BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.

Please evaluate BNSF's proposal (APPLICATION NO.: NWW-2007-01303 ) by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:

1. Require a full environmental impact statement.
2. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.

I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.

The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.

In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.

And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.

Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.

26-Apr-18

I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.

BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.

Please evaluate BNSF's proposal (APPLICATION NO.: NWW-2007-01303 ) by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:

1. Require a full environmental impact statement.
2. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.

26-Mar-18	<p>I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Extend the public comment period by 120 days from the date of the public notice.</li><li>2. Require a full environmental impact statement.</li><li>3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>

15-Mar-18	<p>I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.</p> <p>The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.</p> <p>In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.</p> <p>And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.</p> <p>Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.</p>

15-Mar-18	<p>I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.</p> <p>The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.</p> <p>In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.</p> <p>And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.</p> <p>Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.</p>

19-Mar-18

I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.

The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.

In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.

And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.

Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.

25-Mar-18

[NOTE: This individual sent in two comments on 03/25/2018 to Steven Fischer]. I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.

BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.

Please evaluate BNSF's proposal by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:

1. Extend the public comment period by 120 days from the date of the public notice.
2. Require a full environmental impact statement.
3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.

I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.

The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.

In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.

And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.

Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.

26-Mar-18

There are 3 identical comments.

I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.

BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.

Please evaluate BNSF's proposal by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:

1. Extend the public comment period by 120 days from the date of the public notice.
2. Require a full environmental impact statement.
3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.

At this point, BNSF has not volunteered enough information about the project and its significant adverse impacts/possible mitigation to make a decision on whether any permits should be issued for this proposal. ¶ BNSF has not demonstrated the need to double-track a small section of track that has a minimal train transit time over Lake Pend Orielle. ¶ So, my answer is NO. No permits should be issued at this time. Obtaining public comment for the proposal by BNSF to double-track and construct three bridges over Lake Pend Orielle is important, and has far-reaching impacts. Unfortunately, the general public or others that write comments are not experts. ¶ In reality, this proposal needs to have a full EIS evaluation with specific studies, an extended study area with analysis of the cumulative impacts that would occur with the increased train traffic. Then, any permitting agency that needs to research environmental impacts, can refer to the FEIS. This also will allow multiple agencies to use the same documents to approve or deny their permits. ¶ There are too many factors that are involved with this proposal to rely on a simple environmental assessment. ACE and CG, to issue permits, normally rely on expert evaluations of the entire proposal. No one expects ACE or CG to be experts and provide the facts on the entire varied aspects of this proposal. Nor, would I want these agencies to ignore impacts that could be mitigated, or possibly issue a permit in error. ¶ Without sufficient information provided by BNSF, this is a list of the "questions" that I would have posed in a scoping public comment, to get the railroad started: 1. ALTERNATIVES a. Railroad bridge construction design  
b. Bridge building materials  
c. Type of fill materials  
d. Method of dredging/piling installation  
e. Bridge approaches/landings  
f. Current controlled/uncontrolled/at-grade crossings  
g. Emergency access to avoid congested crossings  
h. Construction windows  
i. Older oil rail cars  
j. Excessive length of trains  
k. Uncovered coal rail cars  
l. Deposits of fugitive coal dust/particles  
m. Application of surfactants on coal train cars  
n. Filling wetlands  
o. To achieve no net loss  
p. Locations to relieve choke points  
q. Potential mitigations  
r. Train nose/horns  
s. Locomotive stationary operations—idling

The bridges would create a wide range of direct, indirect, and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Extend the public comment period by 120 days from the date of the public notice.</li><li>2. Require a full environmental impact statement.</li><li>3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>

26-Apr-18	<p>[NOTE: Van Camp also sent other comments on 04/26/2018 to the Coast Guard] I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. 16-Mar-18	<p>I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.</p> <p>The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.</p> <p>In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.</p> <p>And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.</p> <p>Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.</p>

20-Mar-18	<p>Living in a community that is affected by rail transport on a daily basis, I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States.</p> <p>As proposed, this project would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, and the Pacific Northwest.</p> <p>BNSF's proposal could change the built and natural environments, and BNSF's operations would also change as a result, further affecting safe navigability on the lake, emergency response times, rail safety and transportation in the region. In fact, this project could hamper naval submarine operations.</p> <p>Our community, economy, and the surrounding environment depend on maintaining and protecting Lake Pend Oreille and keeping families and businesses along the rail line safe.</p> <p>Please evaluate BNSF's proposal with the same seriousness and concern we have for this issue. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal (APPLICATION NO.: NWW-2007-01303 ) by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Require a full environmental impact statement.</li><li>2. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>
15-Apr-18	<p>(NOTE: Rhea Verbanic has a different comment dated 6/26/2018, different email address, in this matrix.) Living in a community that is affected by rail transport on a daily basis, I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. ¶ As proposed, this project would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, and the Pacific Northwest. ¶ BNSF's proposal could change the built and natural environments, and BNSF's operations would also change as a result, further affecting safe navigability on the lake, emergency response times, rail safety and transportation in the region. In fact, this project could hamper naval submarine operations. ¶ Our community, economy, and the surrounding environment depend on maintaining and protecting Lake Pend Oreille and keeping families and businesses along the rail line safe. ¶ Please evaluate BNSF's proposal with the same seriousness and concern we have for this issue. Accordingly, I request the following: 1. Extend the public comment period by 120 days from the date of the public notice. 2. Draft a full environmental impact statement. 3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal. 4. Conduct at least one public hearing before the environmental impact statement is completed and at least one public hearing after it is released.</p>

26-Jun-18	<p>(NOTE: Rhea Verbanic has a different comment dated 4/15/2018, different email address, in this matrix.) The U.S. Army Corps of Engineers stating "blah, blah, blah" following the section on Public Involvement in its Draft Environmental Assessment for the Carey Creek Shoreline Stabilization Project is troubling to me as a local who lives in this area and has concerns about projects being reviewed by federal agencies.</p> <p>Our community, economy and the surrounding environment depend on protecting Lake Pend Oreille and keeping families and businesses along the rail line safe.</p> <p>This was made clear in a 2008 University of Idaho survey of 267 nearshore property owners on Lake Pend Oreille. According to this survey, property owners place "quite" to "extreme" importance on water quality issues, and homeowners "strongly believe" that the lake needs protecting.*</p> <p>Please evaluate BNSF's proposal to add a second rail bridge across Lake Pend Oreille with the same seriousness and concern we have for this issue. Accordingly, I request the following:</p> <ol style="list-style-type: none"> <li>1. Draft a full environmental impact statement.</li> <li>2. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li> <li>3. Conduct at least one public hearing before the environmental impact statement is completed and at least one public hearing after it is released.</li> </ol> <p>*Coombs, D.M. and N. Sanyal. 2008. "Understanding Shoreline Property Owner's Views on the Water Quality of Lake Pend Oreille." A Report for the Tri-State Water Quality Council. Moscow, ID: University of Idaho.</p>
27-Mar-18	<p>There are 3 identical comments.</p> <p>I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"> <li>1. Extend the public comment period by 120 days from the date of the public notice.</li> <li>2. Require a full environmental impact statement.</li> <li>3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li> </ol>

26-Apr-18	<p>[Note: Verrill has another comment dated 4-26-18] I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. 16-Mar-18

I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.

The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.

In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.

And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.

Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.

25-Mar-18	<p>[NOTE: This individual sent into two comments on 03/25/2018 to Steven Fischer and the Coast Guard]. I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. <p>26-Apr-18</p>	<p>t concerns me that yet another fossil fuel carrier wants to expand capacity for a product that it spilled anywhere along the line leaves a lasting legacy of pollution. That legacy can be seen in Yellowstone National Park, numerous rivers and in the Dakotas where the newest pipeline has already spilled 200,000+ gallons into a farmer's field as well as along every rail line where each coal car is known to lose 500 pounds of toxic cargo along the route.</p> <p>Such projects may have been sensible in the early and mid 20th century as we were ramping up our nation's productivity, but now when oil-exporting countries are deploying solar because it is cheaper than their own reserves, we should reconsider.</p> <p>BNSF is a competent railway with capable crews to repair rail accidents when they happen, but it is a known fact that they do not have the tools or infrastructure to address an oil or coal spill. The recent accident on the Columbia showed that BNSF can do little but wait until the fire is out, however many gallons of oil may be flowing at the time. A spill of that nature would be catastrophic to Idaho's pristine Lake Pend Oreille and everyone around it as the tourism and related businesses would suffer losses of trade, property values would drop and who can count how many jobs would be lost forever.</p> <p>Can BNSF insure itself and Idaho against the risk of that much loss? Can any company? Is Idaho going to receive enough benefit from these cargoes passing through to compensate for that risk?</p> <p>Finally, is Idaho going to examine the full impact an accident would have across all sectors of the economy?</p> <p>That's what your State's taxpayers are paying for in their Government and they deserve a report with the whole truth about the project, not just what BNSF wants to be considered.</p> <p>I thank you and my Brother In Law (Hayden) thanks you.</p> <p>I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. 20-Mar-18	<p>Living in a community that is affected by rail transport on a daily basis, I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States.</p> <p>As proposed, this project would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, and the Pacific Northwest.</p> <p>BNSF's proposal could change the built and natural environments, and BNSF's operations would also change as a result, further affecting safe navigability on the lake, emergency response times, rail safety and transportation in the region. In fact, this project could hamper naval submarine operations.</p> <p>Our community, economy, and the surrounding environment depend on maintaining and protecting Lake Pend Oreille and keeping families and businesses along the rail line safe.</p> <p>Please evaluate BNSF's proposal with the same seriousness and concern we have for this issue. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Extend the public comment period by 120 days from the date of the public notice.</li><li>2. Draft a full environmental impact statement.</li><li>3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li><li>4. Conduct at least one public hearing before the environmental impact statement is completed and at least one public hearing after it is released.</li></ol>

19-Mar-18	<p>I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.</p> <p>The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.</p> <p>In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.</p> <p>And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.</p> <p>Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.</p>

Letter to the Editor...in favor of EIS. [UP ED] BNSF Bridge Proposal Warrants Close Scrutiny, April 12, 2018 by Matt Nykiel. "Look before you leap," is good advice for anyone jumping into a cold lake or a big project. Likewise, the community of Sandpoint should examine options carefully as Burlington Northern-Santa Fe proposes a new bridge over our prized Lake Pend Oreille.

Folks in Sandpoint and Bonner County do not want to blunder ahead blindfolded. We want a fair and full assessment of what BNSF's project means for us.

BNSF wants to build another bridge over Lake Pend Oreille. But it's unclear whether the benefits of adding a new bridge are worth the potential impacts of transporting hazardous substances through our towns and across lakes and rivers.

We are fortunate to live nearby one of the most beautiful and iconographic lakes in the world. For me, I think about dipping my feet in the cool water on a hot summer day and watching my dog plunge into the lake and paddle away. But the clean, cold waters of Lake Pend Oreille are also critical to our economy and way of life. One train derailment, like the one in Cocolalla last year, could jeopardize all that. It's far better to keep our water clean than to clean it up after it's polluted.

It is only reasonable that our community demand a thorough and unbiased analysis of all the potential impacts building more rail infrastructure could have on public safety and the environmental quality of Lake Pend Oreille. Here's the bad news: Not one of the federal permitting agencies has committed to requiring BNSF complete an Environmental Impact Statement, the gold-standard for environmental review. And, BNSF has yet to provide any independent studies or reports proving exactly how adding another bridge across Lake Pend Oreille will benefit our community.

For years, our community has put up with the risk of transporting crude oil and other dangerous substances near homes, businesses and over critical water resources. The public never had an opportunity to weigh this risk because when the early rail line was first installed trains typically hauled people or inert goods like grain, not thousands of gallons of volatile or toxic substances.

Given the realities of today's train traffic, it is only reasonable that our community is demanding the highest level of scrutiny to decide whether adding more rail infrastructure is safe and whether it's in our communities' best interests.

Scrutiny is no doubt warranted given the scope of BNSF's proposal, which is anticipated to cost well over \$100 million and require at least 3 years of construction, according to BNSF's project application.

In addition to a new bridge over Lake Pend Oreille, new bridges are proposed to cross Sand Creek and Bridge Street. How will this construction impact recreational or emergency access to Lake Pend Oreille, or traffic through town? How might construction noise affect nearby businesses that rely on tourists interested in our serene lake town?

~~BNSF has yet to release any study or plans. In fact, BNSF is advocating to expedite the permitting process, rather~~

26-Apr-17

Duplicate: I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.

BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.

Please evaluate BNSF's proposal (APPLICATION NO.: NWW-2007-01303 ) by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:

1. Require a full environmental impact statement.
2. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.

19-Mar-18	<p>I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.</p> <p>The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.</p> <p>In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.</p> <p>And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.</p>

The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.</p> <p>Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.</p>

25-Mar-18	<p>I've lived in Bonner County, Idaho near Sandpoint for over 30 years, and am very alarmed that BNSF railroad proposes to begin building 3 new bridges in Sandpoint over Lake Pend Oreille, Sand Creek, and Bridge Street, and all without a full Environmental Impact Statement(EIS).</p> <p>Increased rail traffic will mean more commuter crossing delays, delays to EMS services, a higher risk of a disastrous accident spilling oil and/or coal into our lake, and will ultimately exacerbate climate change and mercury pollution since it will facilitate trade of domestic coal and oil products to Asia. Ship transport of oil to American refineries via our coastal waters will also prove disastrous as numerous collisions and near collisions of such ship traffic have already been documented for decades. The estimated increase to 114 trains per day by 2035 is unacceptable, and will surely be harmful to the health and economy of our citizens.</p> <p>Please help to expand the public comment period to 90 days at least, schedule several public hearings, and initiate a full EIS before construction could even begin. This would be the largest construction project in decades near and on Lake Pend Oreille, and as such requires careful scrutiny and full public and professional review. I would like to see it stopped completely.</p>
26-Apr-18	<p>I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Extend the public comment period by 120 days from the date of the public notice.</li><li>2. Require a full environmental impact statement.</li><li>3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>
15-Mar-18	<p>I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.</p> <p>The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.</p> <p>In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.</p> <p>And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.</p> <p>Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.</p>

25-Mar-18	<p>Randall Webb has 2 duplicate email letters sent on 3/25/18. I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. [Following newsclips featured] Daily Journal of Commerce (Seattle, WA), BNSF wants bridge over Idaho Lake, 3/30/2018 : An Idaho water advocacy group says another railway bridge across Lake Pend Oreille would double rail traffic, increasing the chances of derailments of crude oil and coal shipments.

The Bonner County Daily Bee reports the Lake Pend Oreille Waterkeeper is calling on state and federal officials to extend the public comment period for the planned BNSF Railway bridge across the northern Idaho lake, so its potential effects can be better analyzed. KHQ NBC 6 (website), Advocacy group raises concerns on planned railway bridge 3/29/2018: SANDPOINT, Idaho - (AP) - An Idaho water advocacy group says another railway bridge across Lake Pend Oreille would double rail traffic, increasing the chances of derailments of crude oil and coal shipments.

The Bonner County Daily Bee reports the Lake Pend Oreille Waterkeeper is calling on state and federal officials to extend the public comment period for the planned BNSF Railway bridge across the northern Idaho lake, so its potential effects can be better analyzed.

The group says more shipments over the lake would threaten water quality because coal and coal dust is released from the open rail cars.

Bonner County Emergency Medical Services officials say the new bridge would boost its emergency response because personnel are routinely stopped at crossings by trains waiting for traffic to clear on the existing bridge.

Lewiston Tribune - Group raises concerns about railway bridge plan, 3/30/2018, SANDPOINT, Idaho - An additional railway bridge across Lake Pend Oreille in northern Idaho would double rail traffic, increasing the chances of derailments of crude oil and coal shipments, a water advocacy group said.

The group Lake Pend Oreille Waterkeeper is calling on state and federal officials to extend the public comment period for the planned BNSF Railway bridge across the lake, so its potential effects can be better analyzed, the Bonner County Daily Bee reported Thursday.

More shipments over the lake also would threaten water quality from the coal and coal dust that's released from the open rail cars, said Shannon Williamson, executive director of the organization. While county authorities have a response plan to contain hazardous spills, the group said it still would be catastrophic.

"Our communities are not prepared to address the environmental fallout from a coal or train derailment into Lake Pend Oreille," Williamson said in the group's comments to the Idaho Department of Lands.

The group contends the additional rail traffic would pose risks to threatened bull trout. The risk of collisions at railroad crossings would increase as well as traffic delays, the group said. The Bonner County Emergency Medical Services said a second bridge would allow it to respond quicker because personnel are already routinely stopped at crossings by trains waiting for traffic to clear on the existing bridge.

"With the addition of the second bridge, BSNF will be able to greatly alleviate the block of streets in Sandpoint and adjacent areas," said Bob Russey, the agency's chief.

Washington State has identified oil spilling by rail a significant potential in the permitting process for other west coast oil by rail projects. Spokane Riverkeeper is asking that you evaluate BNSF's proposal as a serious risk to the</p>

28-Mar-18

Please find our letter concerning the proposed BNSF bridge over Lake Pend Oreille attached. [PDF FOLLOWS] I am writing in response to the proposed Burlington Northern Santa Fe (BNSF) Bridge Construction Project. Permit Application NO: NWW-2007-01303.

The Spokane Riverkeeper's mission is to protect and restore the health of the Spokane River watershed and to defend our right to a clean Spokane River. The Spokane Riverkeeper advocates for clean water and educates the public about issues that impact our waters. Citizens are encouraged to get involved and stay connected to their Spokane River, one of the region's most valuable natural assets.

This proposed project would create numerous direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, Idaho, and for the down rail region in the Spokane Valley and the City of Spokane, Washington.

1. If constructed the proposed bridges would create potential impacts for species listed under the Endangered Species Act (ESA). Bull trout are threatened under the ESA and no longer occupy much of their former range in the interior mountain west. The proposed fill as well as the potential of trains spilling coal and/or oil under transport pose grave dangers to these already vulnerable populations of native fish in Lake Pend Oreille. Additionally, when completed, the bridges will exacerbate the potential impacts to interior redband trout living in the Spokane River, down rail in the Spokane Valley. These species of native trout are listed as a species of concern in Washington State and any spill of coal or oil could irreparably damage redband trout populations and their long term habitat.

2. The traffic that is added to the down rail lines in Washington State have other cumulative impacts. There is an increased risk of an oil spill over the Spokane Rathdrum Prairie Aquifer. This aquifer is very shallow, protected only by a shallow lens of gravel in most places, and has been designated by the Environmental Protection Agency as a sole source of drinking water for the entire region. A spill of Bakken crude oil or Alberta diluted bitumen oil could cause irreparable harm to this valuable community resource. Increasing rail traffic only increases the odds of such an accident.

3. Additionally, the increased traffic that this project would bring, puts our communities at risk. Spokane City officials and first responders have identified deep concerns with the transportation of crude oil by rail through these down-rail communities. An oil spill in down town Spokane that catches fire, presents a situation for which there is no immediate or appropriate response. Many citizens would be put at risk in such a scenario. Washington State has identified oil spilling by rail a significant potential in the permitting process for other west coast oil by rail projects.

Spokane Riverkeeper is asking that you evaluate BNSF's proposal as a serious risk to the environment region wide. It also presents localized impacts to the areas under construction at Lake Pend Oreille. As such, we request the following:

1. Extend the public comment period by 120 days from the date of the public notice

16-Mar-18	<p>I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.</p> <p>The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.</p> <p>In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.</p> <p>And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.</p> <p>Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.</p>
26-Apr-18	<p>I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal (APPLICATION NO.: NWW-2007-01303 ) by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Require a full environmental impact statement.</li><li>2. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>
27-Apr-18	<p>Janice Wilfing has a duplicate email letter sent on 4/27/18. I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal (APPLICATION NO.: NWW-2007-01303 ) by taking a hard look at all the direct, indirect and cumulative impacts of the project. 16-Mar-18	<p>I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.</p> <p>The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.</p> <p>In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.</p> <p>And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.</p> <p>Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.</p>

I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.

The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.

In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.

And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.

Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.

The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal (APPLICATION NO.: NWW-2007-01303 ) by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"> <li>1. Require a full environmental impact statement.</li> <li>2. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li> </ol>
05-Mar-18	<p>[NOTE: Williamson also has comment letters dated 3/2/2018, 4/30/2018, and 5/3/2018] Lake Pend Oreille Waterkeeper and other community stakeholders in Sandpoint, Idaho are requesting an extension of the public comment period and a series of public hearings regarding the proposed second rail bridge over Lake Pend Oreille (USACE Application #NWW-2007-01303).</p> <p>The public notice indicated that the U.S. Coast Guard has the authority to issue or deny permits for bridges and causeways in or over navigable waters of the United States under the General Bridge Act of 1946. The notice also indicated that the U.S. Coast Guard will act as the federal lead agency overseeing compliance with Section 106 of the National Historic Preservation Act and Endangered Species Act (ESA) consultation for the proposed bridge project.</p> <p>We wanted to share a copy of the letter we submitted to USACE requesting an extension and public hearing(s). Please let me know if you have any questions.</p>

26-Mar-18	<p>[NOTE: This individual sent in two comments on 03/26/2018 to Steven Fischer and the Coast Guard]. I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. 06-Mar-18	<p>I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.</p> <p>The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.</p> <p>In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.</p> <p>And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.</p> <p>Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.</p>

22-Mar-18	<p>Op Ed titled, "Second BNSF bridge to keep trade flowing through Idaho, PNW" (by Senator Chuck Winder and Bruce Agnew, co-chairs of the Pacific NorthWest Economic Region Transportation Committee) ¶ For years, BNSF trains have safely traversed the bridge over Lake Pend Oreille, efficiently shuttling goods and commodities to foreign and domestic markets. ¶ Now, in an effort to further expedite shipping and modernize rail in the Pacific Northwest, BNSF is proposing a multi-million dollar upgrade in the form of a second parallel bridge that will allow rail traffic to move even safer in both directions simultaneously. The new bridge will reduce the times trains have to wait for other trains to cross the bridge. The backups created by waiting trains can sometimes extend for many miles. The second rail bridge will reduce delays in the city, improve air quality and reduce noise by cutting idle times while the trains are stopped in Sandpoint. ¶ The Pacific Northwest Economic Region has worked with Class One and short line railroads to improve rail access and public safety along our trade corridors for many years. The BNSF Sand Point Junction Connector project is a premier national project with regional and local benefits. ¶ The trains that cross this bridge carry varieties of cargo. This proposal is being challenged because of opposition to two commodities: coal and oil. Opponents are using reduction of fossil fuel dependence as a means to stop this investment in our region's infrastructure, to the detriment of all other commodities shipped by rail. ¶ BNSF helps deliver to Idahoans a vast array of consumer products including packaged goods, clothes, appliances, electronics, and automobiles. In all, BNSF moves nearly 1.4 million carloads of freight in Idaho annually. The BNSF Great Northern Corridor route services Idaho's agriculture, timber and other industries and helps them grow and compete in today's global economy. Schedule reliability for the popular Amtrak Empire Builder from Seattle and Portland to Chicago with benefits to local tourism will also be enhanced by the Connector. ¶ The continued growth of freight rail from the Midwest to the West Coast has pushed capacity to the point where a new bridge is needed to handle increased shipping needs. This route moves tons of fresh food and grain each year -- apples, potatoes, wheat and corn that feeds families in America and around the globe. Without a second line, food will take longer to reach markets. On time delivery of freight is critical for our local growers, ranchers and farmers and the second bridge will help ensure world market access. ¶ This same line also transports manufactured goods, either in the form of raw materials or finished products. This includes medical equipment, computer products and airplane parts to Boeing and their Puget Sound manufacturing facilities which has a positive ripple effect through the Northwest economy. ¶ From natural resources, to agriculture, advanced manufacturing and food production, the Pacific Northwest trade-based economy depends on adequate capital investment and safety conscious operations by rail, trucking, and pipeline networks as well as dependable market access for ports such as the Port of Lewiston. Residents of Montana, Idaho, Washington and Oregon benefit by the billions of private dollars BNSF Railway has invested in this corridor recently and the Sand Point Junction Connector is prime evidence.</p>

The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.</p> <p>And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.</p> <p>Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.</p>

26-Mar-18	<p>I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Extend the public comment period by 120 days from the date of the public notice.</li><li>2. Require a full environmental impact statement.</li><li>3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>

Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>

21-Mar-18

I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.

The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.

In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.

And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.

Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.

26-Apr-18

Government at all levels in the US must STOP facilitating the mining, transport, and burning of fossil fuels if our grandchildren and future generations are to live healthy lives on our small planet!

BNSF's proposal to construct a series of bridges in Bonner County, Idaho, does not serve the needs of Idahoans or Americans more broadly. One of the bridges would cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.

BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.

Please evaluate BNSF's proposal (APPLICATION NO.: NWW-2007-01303 ) by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:

1. Require a full environmental impact statement.
2. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.

25-Mar-18	<p>[NOTE: This individual sent in two comments on 03/25/2018 to Steven Fischer and the Coast Guard]. We save one place, another is selected. It just never ends. Talk about simpleminded greed, and regression.</p> <p>I am deeply concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. [NOTE: This individual sent in two comments on 03/25/2018 to Steven Fischer]. I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.

BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.

Please evaluate BNSF's proposal by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:

1. Extend the public comment period by 120 days from the date of the public notice.
2. Require a full environmental impact statement.
3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.

27-Mar-18

I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.

BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.

Please evaluate BNSF's proposal by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:

1. Extend the public comment period by 120 days from the date of the public notice.
2. Require a full environmental impact statement.
3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal. safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.

Please evaluate BNSF's proposal (APPLICATION NO.: NWW-2007-01303 ) by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:

1. Require a full environmental impact statement.
2. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.

15-Mar-18

I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.

The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.

In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.

And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.

Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.

16-Mar-18	<p>The BNSF should be highly ashamed of itself. The proposed second railroad bridge in Sandpoint is nothing but a disguise to bring hundreds of thousands of tons of silica by railway to the proposed smelter plant they are trying to force into Newport, WA. This will affect everyone in the area, and the disastrous environmental impact has already been proven by other silicon smelters around the world. Please contact CANNs, a citizens group informing the public about the truth of this plant. They have made people aware of why this bridge is trying to get pushed through. But the people of Sandpoint and Bonners County don't want it and won't stand by while this area gets destroyed. I strongly urge your timely disapproval of the project's necessary permits.</p>

<p>21-Mar-18</p>	<p>Living in a community that is affected by rail transport on a daily basis, I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States.</p> <p>As proposed, this project would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, and the Pacific Northwest.</p> <p>BNSF's proposal could change the built and natural environments, and BNSF's operations would also change as a result, further affecting safe navigability on the lake, emergency response times, rail safety and transportation in the region. In fact, this project could hamper naval submarine operations.</p> <p>Our community, economy, and the surrounding environment depend on maintaining and protecting Lake Pend Oreille and keeping families and businesses along the rail line safe.</p> <p>I am also very concerned about the silicon that will be transported over this bridge to the proposed smelter. It has been being illegally pushed through by the crooked politicians in WA, and the lawyer for CANNs has all the proof he needs. It will be stopped and you will no longer need this bridge.</p> <p>Please evaluate BNSF's proposal with the same seriousness and concern we have for this issue. Accordingly, I request the following:</p> <ol style="list-style-type: none"> <li>1. Extend the public comment period by 120 days from the date of the public notice.</li> <li>2. Draft a full environmental impact statement.</li> <li>3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li> <li>4. Conduct at least one public hearing before the environmental impact statement is completed and at least one public hearing after it is released.</li> </ol>

28-Mar-18	<p>I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Extend the public comment period by 120 days from the date of the public notice.</li><li>2. Require a full environmental impact statement.</li><li>3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>

26-Mar-18	<p>Living in a community that is affected by rail transport on a daily basis, I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. ¶ As proposed, this project would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, and the Pacific Northwest. It deserves to be analyzed for the complete effects a spill in the lake would have from a train derailment. ¶ Our community, economy, and the surrounding environment depend on maintaining and protecting Lake Pend Oreille and keeping families and businesses along the rail line safe. ¶ Please evaluate BNSF's proposal with the same seriousness and concern we have for this issue. Accordingly, I request the following: 1. Extend the public comment period by 120 days from the date of the public notice. 2. Draft a full environmental impact statement. 3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal. 4. Conduct at least one public hearing before the environmental impact statement is completed and at least one public hearing after it is released.</p>

26-Mar-18	<p>[NOTE: This individual sent in another comment on 03/26/2018 to the Army Corps of Engineers and the Coast Guard]. Living in a community that is affected by rail transport on a daily basis, I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. 18-Mar-18	<p>I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.</p> <p>The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.</p> <p>In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.</p> <p>And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.</p> <p>Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.</p>

26-Apr-18	<p>I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. 27-Mar-18	<p>There are 3 identical comments.</p> <p>I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Extend the public comment period by 120 days from the date of the public notice.</li><li>2. Require a full environmental impact statement.</li><li>3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>

06-Apr-18	<p>Living in a community that is affected by rail transport on a daily basis, I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake. ¶ As proposed, this project would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, and the Pacific Northwest. ¶ BNSF's proposal could change the built and natural environments, and BNSF's operations would also change as a result, further affecting safe navigability on the lake, emergency response times, rail safety and transportation in the region. Our community, economy, and the surrounding environment depend on maintaining and protecting Lake Pend Oreille and keeping families and businesses along the rail line safe. ¶ Please evaluate BNSF's proposal with the same seriousness and concern we have for this issue. Accordingly, I request the following: 1. Extend the public comment period by 120 days from the date of the public notice. 2. Draft a full environmental impact statement. 3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal. 4. Conduct at least one public hearing before the environmental impact statement is completed and at least one public hearing after it is released.</p>

23-Apr-18	<p>On behalf of the South Dakota Grain &amp; Feed Association (SDGFA), I am writing to express my support for the Sandpoint Junction Connector Project. SDGFA is a statewide, non-profit trade association composed of elevator firms and other agribusinesses involved in the grain, feed and farm supply business. ¶ South Dakota's number one business is agriculture with a \$25.6 billion economic impact each year and generates 20 percent of the state's economic activity. In 2017, BNSF shipped over 130,000 carloads of wheat, soybeans, corn, and other agricultural products from South Dakota and over half of these products traveled the northern transcontinental route. ¶ BNSF have invested nearly \$2 billion to expand capacity on the northern transcontinental route since 2013. The one-lane bridge at Sandpoint remains a critical chokepoint in the network. The proposed Sandpoint Junction projects adds capacity and alleviates that chokepoint to allow enhanced movement of freight, including South Dakota agriculture products. ¶ Thank you for the opportunity to share the support of the South Dakota Grain &amp; Feed Association for this project.</p>

27-Mar-18	<p>Seems that the history of the railroad has been a story of disregard to the environment and inhabitants in the name of "progress". I am very concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. The beauty of the area and health of the eco-system will suffer and must not be overlooked. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest. As a resident of the Pacific Northwest, I do not want more railway traffic of dirty and hazardous cargo rolling through our pristine rural areas nor our neighborhoods. The coal dust that comes from the trains without a derailment has been significant in households along Puget Sound Narrows passage, I can imagine it is the same throughout the route! Unacceptable!!</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Extend the public comment period by 120 days from the date of the public notice.</li><li>2. Require a full environmental impact statement.</li><li>3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>
26-Apr-18	<p>Duplicate: I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. 15-Mar-18	<p>I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.</p> <p>The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.</p> <p>In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.</p> <p>And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.</p> <p>Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.</p>

26-Apr-18	<p>Russell Ziegler has a duplicate email letter sent on 4/26/18. I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal (APPLICATION NO.: NWW-2007-01303 ) by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Require a full environmental impact statement.</li><li>2. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>

10-Mar-18	<p>I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.</p> <p>The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.</p> <p>In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks.
