26-Mar-18	<p>Duplicate: I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"> <li>1. Extend the public comment period by 120 days from the date of the public notice.</li> <li>2. Require a full environmental impact statement.</li> <li>3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li> </ol>

09-Apr-18	<p>The purpose of this notice is to inform the public that the U.S. Army Corps of Engineers, Portland District (Corps) may require additional compensatory mitigation for unavoidable impacts and permanent losses of certain waters of the United States. The Corps has developed a list of Aquatic Resources of Special Concern (ARSC) to identify and define those aquatic resources that are unique, difficult to replace, and/or have high ecological function. The list of ARSC, with definitions, is attached.</p> <p>Mitigation is an important part of the Corps' permit evaluation process. Compensatory mitigation may be required to offset unavoidable adverse impacts remaining after all appropriate and practicable avoidance and minimization measures have been implemented. Mitigation requirements are outlined in the Compensatory Mitigation for Losses of Aquatic Resources Final Rule (33 CFR Part 332), commonly referred to as the "mitigation rule."</p> <p>The mitigation rule at 33 CFR Part 332.3(f) describes factors used to determine the amount of required compensatory mitigation to replace lost aquatic functions. Factors to consider regarding the amount of compensatory mitigation include the likelihood of success, the difficulty of establishing the desired aquatic resource type, and the temporal loss of aquatic resource functions due to the time it takes to fully achieve functions at the compensatory mitigation project. Due to their unique characteristics, ARSC can be particularly difficult to replace. Where unavoidable impacts result in environmental losses within ARSC, the Corps will consider the factors above in determining the appropriate compensatory mitigation requirements.</p> <p>Compensatory mitigation ratios for impacts to ARSC may be higher than required for other types of waters to account for the risk of failure and other factors, such as temporal loss, when replacing these aquatic resources. [PLEASE SEE THE PDF FOR THE REMAINING TEXT.]</p>

20-Mar-18	<p>I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.</p> <p>The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.</p> <p>In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.</p> <p>And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.</p> <p>Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.</p>

25-Mar-18	<p>I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Extend the public comment period by 120 days from the date of the public notice.</li><li>2. Require a full environmental impact statement.</li><li>3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>

One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal (APPLICATION NO.: NWW-2007-01303 ) by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Require a full environmental impact statement.</li><li>2. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>
15-Mar-18	<p>I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.</p> <p>The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.</p> <p>In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.</p> <p>And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.</p> <p>Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.</p>

25-Mar-18	<p>I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Extend the public comment period by 120 days from the date of the public notice.</li><li>2. 09-Mar-18

I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.

The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.

In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.

And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.

Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.

12-Mar-18

I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.

The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.

In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.

And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.

Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.

27-Mar-18

I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.

BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.

Please evaluate BNSF's proposal by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:

1. Extend the public comment period by 120 days from the date of the public notice.
2. Require a full environmental impact statement.
3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.

18-Mar-18	<p>I am writing to protest the Sandpoint Junction Connector project and urge your swift denial of the permits needed for construction. The project represents a significant threat that does little to protect the local environment. It is a project worthy of an expedited denial.</p> <p>The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, increasing the environmental risks to a fragile eco system, decreasing water quality, and adding to emissions issues in area that regularly suffers from hazardous air quality to inversions and wildfire smoke. This project will mean longer wait times on nearby roads and streets that cross BNSF tracks as BNSF has already seen massive derailment in the area that clogged local thoroughfares for days at a time. Doubling rail capacity of the line here, this will substantially increase the safety risks associated with hazmat train traffic in the region.</p> <p>The project's threat to the scenic value and sustainability of the Pend Oreille and Upper Columbia watershed is unproven and BNSF is commitment to the highest standards for safety is certainly debatable considering that in recent years BNSF/Montana Rail Link has seen Boeing 737 planes lost into the Clark Fork, grain dumped along US 95 south of Lake Pend Oreille among other accidents. It is questionable if BNSF is as well prepared to deal with sensitive areas like Lake Pend Oreille as they claim. Their "highly-detailed response" plans for environmentally sensitive regions don't mitigate the damage created by an accident and the reset to zero in billions of dollars in restoration and recovery efforts. The reality is rail is hardly the safest, most efficient and environmentally friendly way to ship commodities. The best thing we can do is oppose proposals such as Sandpoint that will further impact local stakeholders, decrease safety, while exposing the environment to great risk.</p> <p>Sandpoint is an outdated and poorly envisioned proposal that in many regards places the needs of a just passing through rail operator above those of local residents who have raised significant opposition and critical questions. Thank you for the opportunity to voice my opposition for the Sandpoint Junction Connector. I strongly urge your timely rejection of the project's necessary permits.</p>

20-Mar-18

I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.

The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.

In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.

And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.

Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.

I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.

BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.

Please evaluate BNSF's proposal by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:

1. Extend the public comment period by 120 days from the date of the public notice.
2. Require a full environmental impact statement.
3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.

30-Apr-18	<p>As a resident of Sandpoint, living close to the Pend Oreille River, I am concerned about BNSF's proposal to construct a series of bridges across Lake Pend Oreille in Bonner County, Idaho. Lake Pend Oreille is Idaho's largest lake and the fifth deepest lake in the United States. It also is a major tributary of the Columbia River, whose salmon and other species have been severely impacted by dams and development. ¶ As proposed, the BNSF project would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, north Idaho, and the Pacific Northwest. ¶ BNSF's proposal could change the built and natural environments, and could also affect safe navigation on the lake and river, emergency response times, rail safety and transportation in the region. ¶ Our community, economy, and the surrounding environment depend on maintaining and protecting Lake Pend Oreille and keeping families and businesses that are affected by rail travel in the region safe. ¶ Please evaluate BNSF's proposal with the same seriousness and concern we have for this issue and that would be prudent for such a major project. ¶ Accordingly, I request the following: ¶ 1. Extend the public comment period by 120 days from the date of the public notice. ¶ 2. Draft a full environmental impact statement so that all biological, physical, social and economic impacts. ¶ 3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal. ¶ 4. Conduct public hearings before the environmental impact statement is completed and after it is released.</p>

One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal (APPLICATION NO.: NWW-2007-01303 ) by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Require a full environmental impact statement.</li><li>2. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>

15-Mar-18	<p>I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.</p> <p>The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.</p> <p>In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.</p> <p>And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.</p> <p>Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.</p>
26-Apr-18	<p>I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Extend the public comment period by 120 days from the date of the public notice.</li><li>2. Require a full environmental impact statement.</li><li>3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>

27-Apr-18	<p>The future of the planet will continue to be in human hands for many decades. We are living in critical times and must reverse the damage we have done. Wake up and take an honest look at what is happening in the world with climate change and micro plastics.</p> <p>I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. 26-Mar-18	<p>duplicate: I am profoundly concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the *entirety* of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the entire Pacific Northwest.</p> <p>BNSF's incomplete and strategically vague proposal, if carried out, would impact soils, surface water, air quality, and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety, and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>I am asking that you demand that comprehensive EIS immediately.</p> <p>Please evaluate BNSF's proposal by taking a hard look at all the direct, indirect, and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"> <li>1. Extend the public comment period by 120 days from the date of the public notice.</li> <li>2. Require a full environmental impact statement.</li> <li>3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li> </ol> <p>As a Seattle resident already living in BNSF's Blast Zone, and constantly confronted by noise and vibration from BNSF trains carrying coal and oil, I have a special interest in demanding that BNSF not be allowed to proceed to savage the environment near Sandpoint, and especially Lake Pend Oreille. No operation as dangerously threatening as this one must be allowed to proceed without a full investigation of its immense costs and dangers.</p> <p>I ask you to have the courage and grit to confront BNSF and at the very minimum to demand and enforce its absolute accountability for any and every leak, spill, derailment, or explosion -- or they will just shrug and go on with business as usual.</p>

26-Mar-18	<p>There are 2 identical comments.</p> <p>Living in a community that is affected by rail transport on a daily basis, I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States.</p> <p>My family swim, boat and fish in the waters of Lake Pend Oreille. Grandma and grandpa live on the lakefront. I work at a local resort that depends on the natural beauty and pristine outdoor environment to attract tourism dollars as well as quality employees to our community. Anything that poses a risk to our lake's water quality is a threat to our entire community.</p> <p>As proposed, this project would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, and the Pacific Northwest.</p> <p>BNSF's proposal could change the built and natural environments, and BNSF's operations would also change as a result, further affecting safe navigability on the lake, emergency response times, rail safety and transportation in the region. In fact, this project could hamper naval submarine operations.</p> <p>Our community, economy, and the surrounding environment depend on maintaining and protecting Lake Pend Oreille and keeping families and businesses along the rail line safe.</p> <p>Please evaluate BNSF's proposal with the same seriousness and concern we have for this issue. Accordingly, I request the following:</p> <ol style="list-style-type: none"> <li>1. Extend the public comment period by 120 days from the date of the public notice.</li> <li>2. Draft a full environmental impact statement.</li> <li>3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li> <li>4. Conduct at least one public hearing before the environmental impact statement is completed and at least one public hearing after it is released.</li> </ol>

26-Apr-18	<p>[NOTE: This individual sent in another comment on 04/26/2018 to Steven Fischer]. I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>I am also a property owner in Eastern Washington near the Idaho border and the BNSF railroad line that will carry hazardous substances will be traveling through my property. When we bought the property which we live on, we were told the railroad easement through our property would not be a problem, as it didn't get high use. However in the past two years they have been working on the tracks and have fortified the bridge near us. The area we live in is heavily forested and has been threatened by forest fires for the past several summers. The combination of fire and trains carrying highly volatile materials is a dangerous combination and would be very destructive to this lovely region.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal (APPLICATION NO.: NWW-2007-01303 ) by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Require a full environmental impact statement.</li><li>2. 26-Mar-18	<p>[NOTE: This individual sent in two comments on 03/26/2018 to Steven Fischer]. I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Extend the public comment period by 120 days from the date of the public notice.</li><li>2. Require a full environmental impact statement.</li><li>3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>

15-Mar-18

I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.

The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.

In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.

And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.

Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.

31-Mar-18

[NOTE: This individual sent in another comment on 03/31/2018 to Steven Fischer]. I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.

BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.

Please evaluate BNSF's proposal by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:

1. Extend the public comment period by 120 days from the date of the public notice.
2. Require a full environmental impact statement.
3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.

26-Mar-18

I am very concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.

BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.

Please evaluate BNSF's proposal by taking a hard look at all of the direct, indirect and cumulative impacts of the project. Accordingly, I request that you do the following:

1. Extend the public comment period by 120 days from the date of the public notice.
2. Require a full environmental impact statement.
3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal. Please evaluate BNSF's proposal by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:
  1. Extend the public comment period by at least 120 days from the date of the public notice.
  2. Require a full comprehensive EIS-Environmental Impact Statement.
  3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.

25-Mar-18

I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.

BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.

Please evaluate BNSF's proposal by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:

1. Extend the public comment period by 120 days from the date of the public notice.
2. Require a full environmental impact statement.
3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.

28-Apr-18

Barbara Baird has a duplicate email letter sent on 4/28/18. Lake Pend Oreille is a treasure, a national treasure that must be protected. Any threats to the integrity and health of this ecosystem should be minimized. Do not build a rail bridge, which would add to oil or coal pollution.

I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.

BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.

Please evaluate BNSF's proposal (APPLICATION NO.: NWW-2007-01303 ) by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:

1. Require a full environmental impact statement.
2. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.

I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.

The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.

In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. 26-Apr-18	<p>I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal (APPLICATION NO.: NWW-2007-01303 ) by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Require a full environmental impact statement.</li><li>2. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>
26-Apr-18	<p>Duplicate: I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. 06-Mar-18	<p>I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.</p> <p>The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.</p> <p>In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.</p> <p>And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.</p> <p>Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.</p>

28-Mar-18	<p>Living in a community that is affected by rail transport on a daily basis, I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. ¶ As proposed, this project would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, and the Pacific Northwest. ¶ BNSF's proposal could change the built and natural environments, and BNSF's operations would also change as a result, further affecting safe navigability on the lake, emergency response times, rail safety and transportation in the region. In fact, this project could hamper naval submarine operations. ¶ Our community, economy, and the surrounding environment depend on maintaining and protecting Lake Pend Oreille and keeping families and businesses along the rail line safe. ¶ Please evaluate BNSF's proposal with the same seriousness and concern we have for this issue. Accordingly, I request the following: 1. Extend the public comment period by 120 days from the date of the public notice. 2. Draft a full environmental impact statement. 3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal. 4. Conduct at least one public hearing before the environmental impact statement is completed and at least one public hearing after it is released.</p>

13-Apr-18	<p>Living in a community that is affected by rail transport on a daily basis, I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. ¶ As proposed, this project would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, and the Pacific Northwest. ¶ BNSF's proposal could change the built and natural environments, and BNSF's operations would also change as a result, further affecting safe navigability on the lake, emergency response times, rail safety and transportation in the region. In fact, this project could hamper naval submarine operations. ¶ Our community, economy, and the surrounding environment depend on maintaining and protecting Lake Pend Oreille and keeping families and businesses along the rail line safe. ¶ Please evaluate BNSF's proposal with the same seriousness and concern we have for this issue. Accordingly, I request the following: 1. Extend the public comment period by 120 days from the date of the public notice. 2. Draft a full environmental impact statement. 3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal. 4. Conduct at least one public hearing before the environmental impact statement is completed and at least one public hearing after it is released.</p>

Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Extend the public comment period by 120 days from the date of the public notice.</li><li>2. Require a full environmental impact statement.</li><li>3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>

25-Mar-18	<p>[NOTE: This individual sent in two comments on 03/25/2018 to Steven Fischer and the Coast Guard]. I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Extend the public comment period by 120 days from the date of the public notice.</li><li>2. Require a full environmental impact statement.</li><li>3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>

Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>

22-Mar-18	<p>Living in a community that is affected by rail transport on a daily basis, I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States.</p> <p>As proposed, this project would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, and the Pacific Northwest.</p> <p>BNSF's proposal could change the built and natural environments, and BNSF's operations would also change as a result, further affecting safe navigability on the lake, emergency response times, rail safety and transportation in the region. In fact, this project could hamper naval submarine operations.</p> <p>Our community, economy, and the surrounding environment depend on maintaining and protecting Lake Pend Oreille and keeping families and businesses along the rail line safe.</p> <p>Please evaluate BNSF's proposal with the same seriousness and concern we have for this issue. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Extend the public comment period by 120 days from the date of the public notice.</li><li>2. Draft a full environmental impact statement.</li><li>3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li><li>4. Conduct at least one public hearing before the environmental impact statement is completed and at least one public hearing after it is released.</li></ol>

15-Mar-18

I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.

The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.

In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.

And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.

Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.

By improving the efficiency of the line, this will also increase the safety of train traffic in the region.

And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.

Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.

25-Mar-18

I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.

BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.

Please evaluate BNSF's proposal by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:

1. Extend the public comment period by 120 days from the date of the public notice.
2. Require a full environmental impact statement.
3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.

06-Mar-18

In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.

And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.

Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.

25-Mar-18

[NOTE: This individual sent in two comments on 03/25/2018 to Steven Fischer and the Coast Guard]. As someone who grew up in the inland Pacific Northwest and values Pend Oreille Lake very much, I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho, one of which would cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.

BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that would impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can be reviewed only in a thorough, comprehensive Environmental Impact Statement.

Please evaluate BNSF's proposal by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:

1. Extend the public comment period by 120 days from the date of the public notice.
2. Require a full environmental impact statement.
3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.

Please recognize that just a single fossil fuel train derailment could damage and change Lake Pend Oreille forever. Thank you.

06-Mar-18

I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.

The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.

In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.

And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. 15-Mar-18	<p>Sandpoint is an ideal proposal with significant support. It is financially sound, adds to our transportation infrastructure and will lead to an improved economy which will in turn create jobs and adds to the tax base. Rail is the the most efficient means of overland transit and thereby reduces carbon emissions. As I understand it, this will add a parallel track to existing lines and therefore the environmental impact would be negligible.</p> <p>I strongly urge your timely approval of the project's necessary permits.</p>

25-Mar-18	<p>[NOTE: This individual sent in a comment on 03/25/2018 to Steven Fischer]. I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Extend the public comment period by 120 days from the date of the public notice.</li><li>2. Require a full environmental impact statement.</li><li>3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>
15-Mar-18	<p>I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.</p> <p>The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.</p> <p>In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.</p> <p>And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.</p> <p>Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.</p>

29-Mar-18	<p>[NOTE: This individual sent in three comments on 03/29/2018 to the Coast Guard]. I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. 15-Mar-18

I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.

The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.

In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.

And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.

Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.

25-Mar-18

I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.

BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.

Please evaluate BNSF's proposal by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:

1. Extend the public comment period by 120 days from the date of the public notice.
2. Require a full environmental impact statement.
3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.

29-Apr-18	<p>I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. <p>16-Mar-18</p>	<p>I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.</p> <p>The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.</p> <p>In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.</p> <p>And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.</p> <p>Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.</p>

28-Mar-18	<p>This lake is a huge deal in our area! I learned to swim in this lake and eaten fish from this lake, none of which would be possible for future generations if a tragedy were to occur (derailment). We just had that huge accident in Athol - what if that had been oil or chemicals? Enough is enough! Put human beings, and animals first! To hell with money and the greedy people driving this proposal! ¶ Living in a community that is affected by rail transport on a daily basis, I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. ¶ As proposed, this project would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, and the Pacific Northwest. ¶ BNSF's proposal could change the built and natural environments, and BNSF's operations would also change as a result, further affecting safe navigability on the lake, emergency response times, rail safety and transportation in the region. In fact, this project could hamper naval submarine operations. ¶ Our community, economy, and the surrounding environment depend on maintaining and protecting Lake Pend Oreille and keeping families and businesses along the rail line safe. ¶ Please evaluate BNSF's proposal with the same seriousness and concern we have for this issue. Accordingly, I request the following: 1. Extend the public comment period by 120 days from the date of the public notice. 2. Draft a full environmental impact statement. 3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal. 4. Conduct at least one public hearing before the environmental impact statement is completed and at least one public hearing after it is released.</p>

One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Extend the public comment period by 120 days from the date of the public notice.</li><li>2. Require a full environmental impact statement.</li><li>3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>
15-Mar-18	<p>I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.</p> <p>The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.</p> <p>In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.</p> <p>And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.</p> <p>Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.</p>

26-Apr-17	<p>Duplicate: I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal (APPLICATION NO.: NWW-2007-01303 ) by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Require a full environmental impact statement.</li><li>2. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>
20-Mar-18	<p>Living in a community that is affected by rail transport on a daily basis, I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States.</p> <p>As proposed, this project would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, and the Pacific Northwest.</p> <p>BNSF's proposal could change the built and natural environments, and BNSF's operations would also change as a result, further affecting safe navigability on the lake, emergency response times, rail safety and transportation in the region. In fact, this project could hamper naval submarine operations.</p> <p>Our community, economy, and the surrounding environment depend on maintaining and protecting Lake Pend Oreille and keeping families and businesses along the rail line safe.</p> <p>Please evaluate BNSF's proposal with the same seriousness and concern we have for this issue. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Extend the public comment period by 120 days from the date of the public notice.</li><li>2. Draft a full environmental impact statement.</li><li>3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li><li>4. Conduct at least one public hearing before the environmental impact statement is completed and at least one public hearing after it is released.</li></ol>

18-Mar-18

I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.

The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.

In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.

And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.

Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.

The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.</p> <p>And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.</p> <p>Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.</p>
26-Apr-18	<p>I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal (APPLICATION NO.: NWW-2007-01303 ) by taking a hard look at all the direct, indirect and cumulative impacts of the project. 12-Mar-18

I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.

The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.

In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.

And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.

Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.

26-Apr-18

I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.

BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.

Please evaluate BNSF's proposal (APPLICATION NO.: NWW-2007-01303 ) by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:

1. Require a full environmental impact statement.
2. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.

22-Mar-18	<p>This project goes right through the heart of downtown Sandpoint. It may be the cheapest way to do business but is this what you would want in your backyard? Railroads have a long history in the area but this development would bring almost a continuous line of trains into what is essentially the heart of the Sandpoint tourist/business district. Every day open coal trains go by uncovered and tanks of flammable liquid pass through town close enough to City Beach to be dangerous to many if there were a derailment. I ask you to consider moving the bridges and changing your plans to bring trains across as a less populated, more industrial area. Unfortunately I am resigned to the fact that this letter will have little impact on your decision but I feel rather hopeless about most of the decisions that corporations and the government make these days. However I am committed to at least participating in activities that inform you and the community about how negatively these tracks and additional trains will impact the city of Sandpoint downtown and City Beach.</p> <p>As an aside I lived in a town of 250,000 in the Midwest where a train did derail in a big rainstorm and explode due to flammable contents. The explosion instantly killed the people just behind the gate in their car as they were waiting for the train to pass. ¶ Living in a community that is affected by rail transport on a daily basis, I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States.</p> <p>As proposed, this project would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, and the Pacific Northwest.</p> <p>BNSF's proposal could change the built and natural environments, and BNSF's operations would also change as a result, further affecting safe navigability on the lake, emergency response times, rail safety and transportation in the region. In fact, this project could hamper naval submarine operations.</p> <p>Our community, economy, and the surrounding environment depend on maintaining and protecting Lake Pend Oreille and keeping families and businesses along the rail line safe.</p> <p>Please evaluate BNSF's proposal with the same seriousness and concern we have for this issue. Accordingly, I request the following:</p> <ol style="list-style-type: none"> <li>1. Extend the public comment period by 120 days from the date of the public notice.</li> <li>2. Draft a full environmental impact statement.</li> <li>3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li> </ol>

Accordingly, I request the following:</p> <ol style="list-style-type: none"> <li>1. Require a full environmental impact statement.</li> <li>2. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li> </ol>

29-Mar-18	<p>Bryan Branson has 3 duplicate email letters sent on 3/29/18. I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Extend the public comment period by 120 days from the date of the public notice.</li><li>2. Require a full environmental impact statement.</li><li>3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>

15-Mar-18	<p>I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.</p> <p>The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.</p> <p>In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.</p> <p>And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.</p> <p>Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.</p>

Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"> <li>1. Extend the public comment period by 120 days from the date of the public notice.</li> <li>2. Require a full environmental impact statement.</li> <li>3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li> </ol>
27-Apr-18	<p>I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal ( APPLICATION NO.: NWW-2007-01303 ) by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"> <li>1. Require a full environmental impact statement.</li> <li>2. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li> </ol>
15-Mar-18	<p>(This matrix includes another letter by Larry Brown dated 3/15/2018.) The proposed Sandpoint Junction Connector Project in Sandpoint Idaho is a vital piece of freight mobility infrastructure and IAM&amp;AW District Lodge 751 supports its construction. ¶ Washington State is one of the most trade-dependent states in the country. Investments in America's trade infrastructure are critical in order to maintain and grow our economy. Rail is a prime example of privately-funded and owned infrastructure. ¶ This project will increase the capacity of the Great Northern Rail Corridor that is an important conduit for everything from consumer goods, grain, lumber and, importantly to members of our Union - industrial and airplane components. ¶ Rail continues to be the safest and most environmentally friendly method to transport freight. The Sandpoint Junction Connector Project is an essential piece of our trade infrastructure that supports industries that provide family-wage jobs. For these reasons IAM&amp;AW District Lodge 751 asks that you support the Sandpoint Junction Connector.</p>

26-Mar-18	<p>[NOTE: This individual sent in two comments on 03/26/2018 to Steven Fischer and the Coast Guard]. 15-Mar-18	<p>I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. As the Legislative and Political Director for the Aerospace Machinists Union District Lodge 751, I am acutely aware of the importance of an efficient and reliable transportation system for the aerospace manufacturing industry to thrive here in the Great Pacific Northwest.</p> <p>The Aerospace Machinists Union District Lodge 751 represents approximately 30 thousand workers at Boeing. Many of those workers are employed building the 737 jetliner. The current rate of production is at a record 52 airplanes a month. There are tentative plans by Boeing to increase production rates even higher than the published increase to 63.</p> <p>For each airplane assembled in Renton Washington, Boeing must take delivery of a completed fuselage which is produce by Spirit Aerospace in Wichita Kansas and then shipped by rail. Without a reliable Rail system, production rates will be limited or even decreased and employment will be impacted at Boeing. Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.</p>

26-Apr-18	<p>[NOTE: This individual sent in another comment on 04/26/2018 to the Coast Guard]. I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. 28-Apr-18	<p>Harry and Jill Brownfield have a duplicate email letter sent on 4/28/18. We are concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal (APPLICATION NO.: NWW-2007-01303 ) by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, we request the following:</p> <ol style="list-style-type: none"><li>1. Require a full environmental impact statement.</li><li>2. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>
13-Mar-18	<p>I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.</p> <p>The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.</p> <p>In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.</p> <p>And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.</p> <p>Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.</p>

25-Mar-18	<p>duplicate: I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. 30-Mar-18	<p>Living in a community that is affected by rail transport on a daily basis, I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. ¶ As proposed, this project would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, and the Pacific Northwest. ¶ BNSF's proposal could change the built and natural environments, and BNSF's operations would also change as a result, further affecting safe navigability on the lake, emergency response times, rail safety and transportation in the region. In fact, this project could hamper naval submarine operations. ¶ Our community, economy, and the surrounding environment depend on maintaining and protecting Lake Pend Oreille and keeping families and businesses along the rail line safe. ¶ Please evaluate BNSF's proposal with the same seriousness and concern we have for this issue. Accordingly, I request the following: 1. Extend the public comment period by 120 days from the date of the public notice. 2. Draft a full environmental impact statement. 3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal. 4. Conduct at least one public hearing before the environmental impact statement is completed and at least one public hearing after it is released.</p>

Dear Admiral Zukunft:

I am pleased to write in support of the proposed Sandpoint Junction Connector project.

Agriculture is one of Montana's largest economic sectors and the backbone of our rural economy. Montana exports wheat, pulse crops, barely, oats, rye, malt, and many other agricultural commodities from our state to feed people across the nation and the world. The majority of these high quality agricultural products are delivered by rail through the Pacific Northwest for markets in Washington, Oregon, California and overseas. In 2008, BNSF shipped just 25,000 carloads of Montana wheat and 411 carloads of pulse crops to the Pacific Northwest. Today, BNSF ships more than 39,000 carloads of Montana wheat and 3,600 carloads of pulse crops to the Pacific Northwest. This is almost a 55% increase for Montana wheat and nearly a 900% increase in pulse crops over the last past ten years. The increase in demand is a great benefit to Montana's economy and highlights the changing agricultural food supply chain of the world. To ensure that agricultural producers in Montana, and in our neighboring states, get a fair market price for their high quality products we need an efficient and reliable rail network.

The current single lane bridge across Lake Pend Oreille has become a bottleneck for rail shipments coming from Montana during our peak agricultural and harvest times. The longer grain stays in the bin, the less farmers make- causing a ripple effect throughout Montana's economy. Since 2014, BNSF has shown their commitment to the efficient flow of goods by investing millions of dollars and expanding miles of double track along the northern transcontinental route to increase rail capacity. These investments are driven by the record demand for agricultural products from Montana and the west-including an all-time record volume of agricultural products just this past March.

The completion of the Sandpoint Junction Connector project will open up the current bottleneck along the northern corridor and allow BNSF to meet current volume demands and deliver a more reliable service for Montana farms, ranches, businesses, and future exporters.

I am confident the Army Corps of Engineers and the U.S. Coast Guard, along with all local and state entities, will conduct a thorough review and analysis of this proposal. I ask that we get shovels in the ground soon to meet the needs of businesses in Montana and throughout the United States.

Thanks again for the opportunity to share my support for this project. I ask that you consider BNSF Railway's application to proceed with the Sandpoint Junction favorably.

Sincerely,

Steve Bullock

Governor

Comments received by USACE/IDL in response to PN for Application

[NOTE: Gov. Bullock has a duplicate letter under John Malia dated 4/6/2018 as an attachment to Malia] Attached is a letter of support for the Sandpoint Junction Connector project from Montana Governor Steve Bullock. The letters are being mailed today but wanted to email you both a copy. (PDF attachment to Admiral Zukunft dated 4/4/2018. Identical letter from MT Governor Bullock to USACE, also a separate PDF in this email) I am pleased to write in support of the proposed Sandpoint Junction Connector project. ¶ Agriculture is one of Montana's largest economic sectors and the backbone of our rural economy. Montana exports wheat, pulse crops, barely [barley], oats, rye, malt, and many other agricultural commodities from our state to feed people across the nation and the world. The majority of these high quality agricultural products are delivered by rail through the Pacific Northwest for markets in Washington, Oregon, California and overseas. ¶ In 2008, BNSF shipped just 25,000 carloads of Montana wheat and 411 carloads of pulse crops to the Pacific Northwest. Today, BNSF ships more than 39,000 carloads of Montana wheat and 3,600 carloads of pulse crops to the Pacific Northwest. This is almost a 55% increase for Montana wheat and nearly 900% increase in pulse crops over the past ten years. The increase in demand is a great benefit to Montana's economy and highlights the changing agricultural food supply chain of the world. To ensure that agricultural producers in Montana, and in our neighboring states, get a fair market price for their quality products we need an efficient and reliable rail network. ¶ The current single lane bridge across Lake Pend Oreille has become a bottleneck for rail shipments coming from Montana during our peak agricultural and harvest times. The longer grain stays in the bin, the less farmers make--causing a ripple effect throughout Montana's economy. Since 2014, BNSF has shown their commitment to the efficient flow of goods by investing millions of dollars and expanding miles of double track along the northern transcontinental route to increase rail capacity. These investments are driven by the record demand for agricultural products from Montana and the west--including an all-time record volume of agricultural products just this past March. ¶ The completion of the Sandpoint Junction Connector project will open up the current bottleneck along the northern corridor and allow BNSF to meet current volume demands and deliver a more reliable service for Montana farms, ranches, businesses, and future exporters. ¶ I am confident the Army Corps of Engineers and the U.S. Coast Guard, along with all local and state entities, will conduct a thorough review and analysis of this proposal. I ask that we get shovels in the ground soon to meet the needs of businesses in Montana and throughout the United States. ¶ Thanks again for the opportunity to share my support for this project. I ask that you consider BNSF Railway's application to proceed with the Sandpoint Junction favorably.

I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest. BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement. Please evaluate BNSF's proposal (APPLICATION NO.: NWW-2007-01303 ) by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:

1. Require a full environmental impact statement.
2. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.

26-Apr-18	<p>[NOTE: This individual sent in another comment on 04/26/2018 to the Coast Guard]. I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. 06-Apr-18	<p>Living in a community that is affected by rail transport on a daily basis, I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. ¶ As proposed, this project would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, and the Pacific Northwest. ¶ BNSF's proposal could change the built and natural environments, and BNSF's operations would also change as a result, further affecting safe navigability on the lake, emergency response times, rail safety and transportation in the region. In fact, this project could hamper naval submarine operations. ¶ Our community, economy, and the surrounding environment depend on maintaining and protecting Lake Pend Oreille and keeping families and businesses along the rail line safe. ¶ Please evaluate BNSF's proposal with the same seriousness and concern we have for this issue. Accordingly, I request the following: 1. Extend the public comment period by 120 days from the date of the public notice. 2. Draft a full environmental impact statement. 3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal. 4. Conduct at least one public hearing before the environmental impact statement is completed and at least one public hearing after it is released. ¶</p> <p>These requests should have been in place. Instead, it feels like this plan is being rushed through so BNSF can make more money while degrading our precious fragile environment.</p>

15-Mar-18	<p>I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.</p> <p>The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.</p> <p>In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.</p> <p>And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.</p> <p>Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.</p>
25-Mar-18	<p>I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Extend the public comment period by 120 days from the date of the public notice.</li><li>2. Require a full environmental impact statement.</li><li>3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>

27-Mar-18	<p>Living in a community that is affected by rail transport on a daily basis, I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States.</p> <p>As proposed, this project would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, and the Pacific Northwest.</p> <p>BNSF's proposal could change the built and natural environments, and BNSF's operations would also change as a result, further affecting safe navigability on the lake, emergency response times, rail safety and transportation in the region. In fact, this project could hamper naval submarine operations.</p> <p>Our community, economy, and the surrounding environment depend on maintaining and protecting Lake Pend Oreille and keeping families and businesses along the rail line safe.</p> <p>Please evaluate BNSF's proposal with the same seriousness and concern we have for this issue. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Extend the public comment period by 120 days from the date of the public notice.</li><li>2. Draft a full environmental impact statement.</li><li>3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li><li>4. Conduct at least one public hearing before the environmental impact statement is completed and at least one public hearing after it is released.</li></ol>
26-Mar-18	<p>Living in a community that is affected by rail transport on a daily basis, I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. ¶ As proposed, this project would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, and the Pacific Northwest. ¶ BNSF's proposal could change the built and natural environments, and BNSF's operations would also change as a result, further affecting safe navigability on the lake, emergency response times, rail safety and transportation in the region. In fact, this project could hamper naval submarine operations. ¶ Our community, economy, and the surrounding environment depend on maintaining and protecting Lake Pend Oreille and keeping families and businesses along the rail line safe. ¶ Please evaluate BNSF's proposal with the same seriousness and concern we have for this issue. 21-Mar-18	<p>I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.</p> <p>The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.</p> <p>In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.</p> <p>And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal (APPLICATION NO.: NWW-2007-01303 ) by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Require a full environmental impact statement.</li><li>2. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>

16-Mar-18	<p>I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.</p> <p>The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.</p> <p>In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.</p> <p>And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.</p> <p>Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.</p>

08-Apr-18	<p>Living in a community that is affected by rail transport on a daily basis, I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. ¶ As proposed, this project would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, and the Pacific Northwest. ¶ BNSF's proposal could change the built and natural environments, and BNSF's operations would also change as a result, further affecting safe navigability on the lake, emergency response times, rail safety and transportation in the region. In fact, this project could hamper naval submarine operations. ¶ Our community, economy, and the surrounding environment depend on maintaining and protecting Lake Pend Oreille and keeping families and businesses along the rail line safe. ¶ Please evaluate BNSF's proposal with the same seriousness and concern we have for this issue. Accordingly, I request the following: 1. Extend the public comment period by 120 days from the date of the public notice. 2. Draft a full environmental impact statement. 3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal. 4. Conduct at least one public hearing before the environmental impact statement is completed and at least one public hearing after it is released.</p>

02-May-18	<p>[NOTE: THIS COMMENTER HAS ANOTHER LETTER DATED 4/8/2018 ALSO. SHE'S LISTED AS LYNNE CAMPBELL] I am writing today from north Idaho with regard to BNSF's proposal for three new RR bridges in the Sand Creek/Lake Pend Oreille watershed. ¶ This proposal has the potential for a whole variety of negative impacts on our life here in the Sandpoint area and on our environment, including (but maybe not limited to) our water quality, the health of our wildlife and its habitat, traffic congestion, emergency response times, our economy, and noise pollution. ¶ I understand that the Coast Guard is the lead federal agency in charge of the environmental oversight of this proposed project, and I submit to you that, based on the scope of the project and its possible wide-ranging effects (to a whole host of railroad communities, well beyond north Idaho), it inherently requires a full EIS versus a less rigorous EA. There is just too much at stake.</p>

Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.</p>

26-Mar-18	<p>[NOTE: This individua sent in two comments on 03/26/2018 to Steven Fischer and the Coast Guard]. I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Extend the public comment period by 120 days from the date of the public notice.</li><li>2. Require a full environmental impact statement.</li><li>3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>

25-Mar-18	<p>[NOTE: This individual sent in two comments on 03/25/2018 to Steven Fischer and the Coast Guard]. Global warming fossil fuels must stay in the ground to save us from the 6th great mass extinction of life on earth! We must only use solar and wind energy in the future. We must have sustainable farming and estuaries that save carbon in the ground as well. This is urgent! See <a href="https://urldefense.proofpoint.com/v2/url?u=https-3A__en.wikipedia.org_wiki_Permian-25E2-2580-2593Triassic-5Fextinction-5Fevent&amp;d=DwICAg&amp;c=0NKfg44GVknAU-XkWXjNnQ&amp;r=Dgxnpx68gNmI2H8qyHqKj1kXSW9aY8b2c0RQwNtuXWM&amp;m=hLdwfiNWCUDnxtYk5MEnT5V_ytMitY5b6Xzpw9mLkX0&amp;s=nVR2tSXuFE2rZM7n53Hr_7Zr-AtR6JtO2KBE3QuNbuk&amp;e=">https://urldefense.proofpoint.com/v2/url?u=https-3A__en.wikipedia.org_wiki_Permian-25E2-2580-2593Triassic-5Fextinction-5Fevent&amp;d=DwICAg&amp;c=0NKfg44GVknAU-XkWXjNnQ&amp;r=Dgxnpx68gNmI2H8qyHqKj1kXSW9aY8b2c0RQwNtuXWM&amp;m=hLdwfiNWCUDnxtYk5MEnT5V_ytMitY5b6Xzpw9mLkX0&amp;s=nVR2tSXuFE2rZM7n53Hr_7Zr-AtR6JtO2KBE3QuNbuk&amp;e=</a> . No fossil fuels must ever come near Lake Pend Oreille!</p> <p>I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. 05-Mar-18	<p>I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.</p> <p>The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.</p> <p>In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.</p> <p>And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.</p> <p>Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.</p>

Accordingly, I request the following: 1. Require a full environmental impact statement. 2. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</p>

The U.S. Army Corps of Engineers stating "blah, blah, blah" following the section on Public Involvement in its Draft Environmental Assessment for the Carey Creek Shoreline Stabilization Project is troubling to me as a local who lives in this area and has concerns about projects being reviewed by federal agencies.

Living in a community that is affected by rail transport on a daily basis, I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States.

As proposed, this project would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, and the Pacific Northwest.

BNSF's proposal could change the built and natural environments, and BNSF's operations would also change as a result, further affecting safe navigability on the lake, emergency response times, rail safety and transportation in the region.

26-Jun-18

Our community, economy, and the surrounding environment depend on maintaining and protecting Lake Pend Oreille and keeping families and businesses along the rail line safe.

Please evaluate BNSF's proposal with the same seriousness and concern we have for this issue. Accordingly, I request the following:

1. Draft a full environmental impact statement.
2. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.
3. Conduct at least one public hearing before the environmental impact statement is completed and at least one public hearing after it is released.

\*Coombs, D.M. and N. Sanyal. 2008. "Understanding Shoreline Property Owner's Views on the Water Quality of Lake Pend Oreille." A Report for the Tri-State Water Quality Council. Moscow, ID: University of Idaho.

26-Mar-18

[NOTE: This individual sent in two comments on 03/26/2018 to Steven Fischer and the Coast Guard]. As a resident of the Northwest who was living in Louisiana during the Deepwater Horizon disaster, I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.

BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.

Please evaluate BNSF's proposal by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:

1. Extend the public comment period by 120 days from the date of the public notice.
2. Require a full environmental impact statement.
3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.

21-Mar-18

Living in a community that is affected by rail transport on a daily basis, I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States.

As proposed, this project would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, and the Pacific Northwest.

BNSF's proposal could change the built and natural environments, and BNSF's operations would also change as a result, further affecting safe navigability on the lake, emergency response times, rail safety and transportation in the region. In fact, this project could hamper naval submarine operations.

Our community, economy, and the surrounding environment depend on maintaining and protecting Lake Pend Oreille and keeping families and businesses along the rail line safe.

Please evaluate BNSF's proposal with the same seriousness and concern we have for this issue. Accordingly, I request the following:

1. Extend the public comment period by 120 days from the date of the public notice.
2. Draft a full environmental impact statement.
3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.
4. Conduct at least one public hearing before the environmental impact statement is completed and at least one public hearing after it is released.

<p>27-Apr-18</p>	<p>Bob Carson has a duplicate email letter sent on 4/27/18. In no way should we support any action that increases the possibility of burning more of the fuel causing the greatest global warming and ocean acidification. No more coal export. Ideally no more coal mining. Certainly no coal ports on the W coast of Canada or the US! No more coal trains. And no bridges for coal trains.</p> <p>I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li> </ol>
<p>25-Mar-18</p>	<p>[Note: Carstarphen left two other comments dated 3/25/18] I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"> <li>1. Extend the public comment period by 120 days from the date of the public notice.</li> <li>2. Require a full environmental impact statement.</li> <li>3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li> </ol>

21-Mar-18	<p>I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.</p> <p>The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.</p> <p>In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.</p> <p>And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.</p> <p>Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.</p>

20-Mar-18	<p>My background/education/work experience and passion is in environmental science. I recently moved to Sandpoint Idaho because the area offered everything I wanted, which included our beautiful lake and river. I am well aware of the multiple train incidents in the past year and am thankful none of them included oil or another hazardous chemical.</p> <p>I believe the current proposal does not do the local residents justice and accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Extend the public comment period by 120 days from the date of the public notice.</li><li>2. Draft a full environmental impact statement.</li><li>3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li><li>4. Conduct at least one public hearing before the environmental impact statement is completed and at least one public hearing after it is released.</li></ol>
09-Mar-18	<p>I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.</p> <p>The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.</p> <p>In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.</p> <p>And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.</p> <p>Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.</p>

25-Mar-18	<p>I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Extend the public comment period by 120 days from the date of the public notice.</li><li>2. Require a full environmental impact statement.</li><li>3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>
26-Apr-18	<p>[NOTE: This individual sent in another comment on 04/26/2018 to the Coast Guard]. It is outrageous that BNSF proposes to construct bridgeS in Bonner County, Idaho. One bridge will cross the entirety of Lake Pend Oreille. Idaho's largest lake and the fifth deepest lake in the United States,; it is unique for this fact and the clarity of its waters!</p> <p>These new rail bridges will transport increased shipments of coal, oil, and other hazardous substances throughout this region. Bridges will create a wide range of direct, indirect and cumulative effects for Sandpoint city, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal will negatively impact soils, pristine water, air quality and groundwater sources. Also, BNSF's operations will change the navigability and safety on this lake because of the new bridges; and, impact emergency response times, rail safety and transportation in the region. These impacts are undeniable, significant, and can only be reviewed in a thorough, comprehensive impartial Environmental Impact Statement (EIS).</p> <p>Please evaluate BNSF's proposal (APPLICATION NO.: NWW-2007-01303 ) and take a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Require a full environmental impact statement.</li><li>2. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>

26-Apr-18	<p>[NOTE: This individual sent in another comment on 04/26/2018 to Steven Fischer]. I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. 21-Mar-18	<p>I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.</p> <p>The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.</p> <p>In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.</p> <p>And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.</p> <p>Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.</p>
15-Mar-18	<p>Over the last two decades BNSF has proven to us in the Inland Northwest that they have aggressively become "good citizens" environmentally through their handling of the Hauser Depot, through their compliance with EPA Tier 4 emissions, through their voluntary installation of the Coal Respray Facility in Pasco to reduce coal dust concerns, as a good employer through the strong safety culture they demonstrate daily, through the enthusiastic embrace of PTC (and the only RR expecting to be in compliance by the 2018 deadline). From that standpoint, BNSF has proven they are trustworthy to do a world class job of protecting Lake Pend Orielle while adding a 2nd bridge.</p> <p>As an avid fan of rail transportation, I pay close attention to the rail traffic through the "funnel" between Sandpoint Jct and Spokane. The 'funnel' is an ongoing traffic jam. Traffic jams are not safe, are not environmentally good, and are economically a drag for not just BNSF but also for all customers using BNSF.</p> <p>I believe BNSF should be allowed to pursue building the 2nd bridge over the Pend Oreille river at Sandpoint.</p>

26-Apr-18	<p>Duplicate: I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal (APPLICATION NO.: NWW-2007-01303 ) by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Require a full environmental impact statement.</li><li>2. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>
26-Apr-18	<p>I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. 26-Jun-18	<p>The U.S. Army Corps of Engineers stating "blah, blah, blah" following the section on Public Involvement in its Draft Environmental Assessment for the Carey Creek Shoreline Stabilization Project is troubling to me as a local who lives in this area and has concerns about projects being reviewed by federal agencies.</p> <p>Our community, economy and the surrounding environment depend on protecting Lake Pend Oreille and keeping families and businesses along the rail line safe.</p> <p>This was made clear in a 2008 University of Idaho survey of 267 nearshore property owners on Lake Pend Oreille. According to this survey, property owners place "quite" to "extreme" importance on water quality issues, and homeowners "strongly believe" that the lake needs protecting.*</p> <p>Please evaluate BNSF's proposal to add a second rail bridge across Lake Pend Oreille with the same seriousness and concern we have for this issue. Accordingly, I request the following:</p> <ol style="list-style-type: none"> <li>1. Draft a full environmental impact statement.</li> <li>2. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li> <li>3. Conduct at least one public hearing before the environmental impact statement is completed and at least one public hearing after it is released.</li> </ol> <p>*Coombs, D.M. and N. Sanyal. 2008. "Understanding Shoreline Property Owner's Views on the Water Quality of Lake Pend Oreille." A Report for the Tri-State Water Quality Council. Moscow, ID: University of Idaho.</p>

16-Mar-18	<p>I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.</p> <p>The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.</p> <p>In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.</p> <p>And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.</p> <p>Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.</p>

18-Mar-18	<p>I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.</p> <p>The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.</p> <p>In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.</p> <p>And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.</p> <p>Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.</p>

25-Mar-18

I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.

BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.

Please evaluate BNSF's proposal by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:

1. Extend the public comment period by 120 days from the date of the public notice.
2. Require a full environmental impact statement.
3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.

30-Apr-18

On behalf of the Board of Directors and the 400 members of Kettle Range Conservation Group, I am writing regarding BNSF's proposal to build three new rail bridges in the Lake Pend Oreille (LPO) watershed. KRCG's membership cares deeply about LPO watershed, and finding enjoyment and rejuvenation recreating in this area. ¶ KRCG is concerned about proposals to build three new rail bridges in the LPO watershed. This includes, among other key project activities, a new bridge across LPO adjacent to the existing rail bridge, a new bridge over Sand Creek adjacent to the existing rail bridge, and a new bridge over Bridge Street adjacent to the existing rail bridge. ¶ I respectfully request that the U.S. Coast Guard perform a full Environmental Impact Statement (EIS) rather than a less rigorous Environmental Assessment (EA).

The proposed railway expansion project entails foreseeable significant direct, indirect, and cumulative environmental impacts to the LPO watershed, which should be fully examined through an EIS. These include:

- Degradation of water quality – increased transport of hazardous materials through the watershed and the possibility of derailment into our local waterways threatens water quality. ¶
- Loss and degradation of wildlife habitat – filling wetland and nearshore areas of the lake for additional bridge construction damages sensitive wildlife habitat beyond repair. The proposed project is within the known historic range of bull trout and is critical BT habitat. ¶
- Train congestion – increased train traffic flow through at-grade rail crossings may cause more traffic congestion, not less, as proposed by BNSF. ¶
- Emergency response – increased train traffic flow through at-grade rail crossings may cause emergency response delays. ¶
- Noise leading to loss of solitude and degradation of recreation experience – increased train traffic may result in more whistle-related noise pollution at and around rail crossings. ¶
- Loss of local economic activity -- associated with increased train traffic may impact local businesses, property values, aesthetics and the tourism industry. ¶

Furthermore, the proposed project encourages rail activity with cumulative impacts that affect resources far beyond Sandpoint, Bonner County and North Idaho in general, throughout rail-side communities. All of these potential impacts need to be thoroughly evaluated through an EIS before authorization of the proposal is issued.

These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>We should be trying HARD to leave fossil fuels IN THE GROUND. We will ALWAYS need some fossil fuels. It is CLOSE TO IMPOSSIBLE to fly a cargo plane or airliner a thousand miles or more on electric batteries. Fossil fuels are NOT RENEWABLE and we are RUNNING OUT of them. That's why oil and gas companies want to set up drilling rigs in our lakes and oceans and in protected places like national parks. This is IMPORTANT. We don't have a lot of time to protect the resources which our children and grandchildren WILL NEED to run our economy when WE ARE GONE.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. 26-Apr-18	<p>[NOTE: This individual sent in another comment on 04/26/2018 to the Coast Guard]. I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal (APPLICATION NO.: NWW-2007-01303 ) by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"> <li>1. Require a full environmental impact statement.</li> <li>2. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li> </ol>
26-Mar-18	<p>Living in a community that is affected by rail transport on a daily basis, I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. ¶ As proposed, this project would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, and the Pacific Northwest. ¶ BNSF's proposal could change the built and natural environments, and BNSF's operations would also change as a result, further affecting safe navigability on the lake, emergency response times, rail safety and transportation in the region. In fact, this project could hamper naval submarine operations. ¶ Our community, economy, and the surrounding environment depend on maintaining and protecting Lake Pend Oreille and keeping families and businesses along the rail line safe. ¶ Please evaluate BNSF's proposal with the same seriousness and concern we have for this issue. Accordingly, I request the following: 1. Extend the public comment period by 120 days from the date of the public notice. 2. Draft a full environmental impact statement. 3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal. 4. Conduct at least one public hearing before the environmental impact statement is completed and at least one public hearing after it is released. ¶ My husband and I spent nearly a decade searching the northwest for the healthiest, cleanest, most wonderful place to relocate to and raise our children- it was Sandpoint. A unique oasis, please do not let a second bridge proceed over our beautiful lake without ridged environmental evaluation and input from the community.</p>

13-Mar-08	<p>I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.</p> <p>The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.</p> <p>In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.</p> <p>And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.</p> <p>Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.</p>

27-Mar-18	<p>I write today, asking all of the above mentioned people and organizations to not build the second bridge across this beautiful lake.</p> <p>I have lived in Sagle for the past 13 years and in that time have seen numerous derailments take place in various areas of the northern Idaho rail lines, with mixed results in clean up. It is only a matter of time before there is a serious derailment where oil, coal, or other toxic chemicals will be dumped somewhere in the lake.</p> <p>Being a former firefighter for 7 years in Sagle, I know of the possibilities of toxic dumps taking place, as the cars that are pulled have a variety of deadly chemicals which could pollute areas of the lake. Doubling the number of trains that travel over the lake double the chances of these spills.</p> <p>Rescue vehicles sit idling while mile long trains slowly move through Sandpoint, diminishing the chances that a person in need of life saving intervention will not be allowed to get those needs filled. Doubling the trains traveling in the Sandpoint area could, quite possibly double the loss of life within this community.</p> <p>If you do honestly believe that a second bridge needs to be built, plan now to allow emergency vehicles to get where they need to go by building underpasses or overpasses, so as to complete their mission. Plan now for these vehicles and get the public behind your desire for the second bridge.</p> <p>Even though you do a large amount of advertising, telling the public of the many positive accomplishments you do, from what I hear, your reputation has taken a nosedive for the past 5 to 6 years. Do something seriously positive and allow all emergency vehicles to accomplish their mission and get to where they need to be in the shortest amount of time. You will be looked upon by the public as a truly thoughtful group.</p>

25-Mar-18	<p>I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal (APPLICATION NO.: NWW-2007-01303 ) by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Require a full environmental impact statement.</li><li>2. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>
26-Apr-18	<p>I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. 15-Mar-18	<p>I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.</p> <p>The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.</p> <p>In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.</p> <p>And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.</p> <p>Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.</p>

17-Apr-18	<p>I am writing to express my support for the proposed Sandpoint Junction Connector Project. The project will provide major economic benefits to the nation's northern tier, including my state of North Dakota. ¶ The project provides significant capacity to BNSF's Great Northern Corridor, which is the key rail link for North Dakota's commodities and Amtrak to the Pacific Northwest. BNSF has been systematically adding necessary capacity to the Great Northern Corridor as needed, making significant investment in North Dakota and all the states served by the Corridor. A network is only as efficient as its chokepoints, and the Sandpoint Junction Connector Project will provide an important expansion of the network to allow for safer, more efficient use of the entire Corridor. ¶ The connector project will help ensure that BNSF's previous investments, in my state and elsewhere, are not deleveraged because of unresolved train congestion at Sandpoint. I encourage your most thorough review of this project, followed by a timely construction schedule so this project can benefit commerce across the Great Northern Corridor.</p>

27-Mar-18	<p>[NOTE: This individual sent in another comment on 03/27/2018 to Steven Fischer]. I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Extend the public comment period by 120 days from the date of the public notice.</li><li>2. Require a full environmental impact statement.</li><li>3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>

26-Mar-18

Although I live in a different part of Idaho, I love the Lake Pend Oreille area, and I go there to enjoy the beauty that is unique to the place. Therefore I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, one of which will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. ¶ As proposed, this project would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, and much of the Pacific Northwest. ¶ BNSF's proposal could change the built and natural environments, and BNSF's operations would also change as a result, further affecting safe navigability on the lake, emergency response times, rail safety and transportation in the region. In fact, this project could hamper naval submarine operations. ¶ Northern Idaho's economy, and the surrounding environment, depend on maintaining and protecting Lake Pend Oreille and keeping families and businesses along the rail line safe. ¶ Please evaluate BNSF's proposal with the same seriousness and concern Idahoans have for this issue. Accordingly, I request the following: 1. Extend the public comment period by 120 days from the date of the public notice. 2. Draft a full environmental impact statement. 3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal. 4. Conduct at least one public hearing before the environmental impact statement is completed and at least one public hearing after it is released.

26-Mar-18

I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.

BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.

Please evaluate BNSF's proposal by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:

1. Extend the public comment period by 120 days from the date of the public notice.
2. Require a full environmental impact statement.
3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.

Please evaluate BNSF's proposal by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:

1. Extend the public comment period by 120 days from the date of the public notice.
2. Require a full environmental impact statement.
3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.

07-Mar-18	<p>As a citizen of Sandpoint I feel very obligated to speak out against the decision to put in another railway bridge across Lake Pend Orielle. All it takes is one derailment of chemicals and/or oil to ruin the water of this lake for wild life and human generations to come. I am aware that there have been multiple derailments in the area within the last couple of years and we cannot afford more. Please do not put our water quality in the hands of corporations as it will surely be ruined. Please do not put corporate rights above the rights of local citizens. I will remain actively engaged against this proposal and make sure my community knows the risks of this proposal. The quality of our local environment determines the quality of our lives.</p>

Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>
27-Apr-18	<p>I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho, particularly the bridge that will cross the entirety of Lake Pend Oreille. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a risk of oil spills in and around the lake, and may be completely unnecessary as Washington weans itself off fossil fuels and rejects oil exports..</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal (APPLICATION NO.: NWW-2007-01303 ) by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Require a full environmental impact statement.</li><li>2. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>

26-Apr-18	<p>Duplicate: I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li> </ol>
22-Mar-18	<p>Living in a community that is affected by rail transport on a daily basis, I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States.</p> <p>As proposed, this project would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, and the Pacific Northwest.</p> <p>BNSF's proposal could change the built and natural environments, and BNSF's operations would also change as a result, further affecting safe navigability on the lake, emergency response times, rail safety and transportation in the region. In fact, this project could hamper naval submarine operations.</p> <p>Our community, economy, and the surrounding environment depend on maintaining and protecting Lake Pend Oreille and keeping families and businesses along the rail line safe.</p> <p>Please evaluate BNSF's proposal with the same seriousness and concern we have for this issue. Accordingly, I request the following:</p> <ol style="list-style-type: none"> <li>1. Extend the public comment period by 120 days from the date of the public notice.</li> <li>2. Draft a full environmental impact statement.</li> <li>3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li> <li>4. Conduct at least one public hearing before the environmental impact statement is completed and at least one public hearing after it is released.</li> </ol>

13-Mar-18	<p>I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.</p> <p>The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.</p> <p>In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.</p> <p>And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.</p> <p>Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.</p>

Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>
26-Apr-18	<p>I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal (APPLICATION NO.: NWW-2007-01303 ) by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Require a full environmental impact statement.</li><li>2. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>

10-Apr-18	<p>I am writing to express support for the Sandpoint Junction Connector project. The project will provide the capacity needed for current traffic volumes and accommodate future growth on movements along BNSF's northern transcontinental main line, a nationally significant freight corridor. Of the over 130,000 carloads of agriculture BNSF hauled out of South Dakota, over half of those products traveled the northern transcontinental route, making it a critical transportation route for South Dakota's farmers and agriculture industry. ¶ South Dakota always has been and will continue to be an agricultural state. It remains the common thread linking citizens, businesses, and communities of our state. South Dakota's agriculture industry has a \$25.6 billion economic impact each year and generates 20 percent of our state's economic activity. In 2017, BNSF shipped over 130,000 carloads of wheat, soybeans, corn, sweet beans, beans, and other agricultural products from South Dakota to plants around the country for domestic use and to ports for export abroad. ¶ I am concerned incorrect information about this project and type of rail traffic it supports could cause a delay in the project. Agriculture products and consumer goods are the largest commodity groups delivered through the Sandpoint project area, both critical to South Dakota's economy. ¶ This project is in the interest of all communities and shippers that depend on a robust rail transportation corridor. I am confident your agency will conduct a thorough review and analysis of the proposal in a timely fashion.</p>
25-Jun-18	<p>The U.S. Army Corps of Engineers stating "blah, blah, blah" following the section on Public Involvement in its Draft Environmental Assessment for the Carey Creek Shoreline Stabilization Project is troubling to me as a local who lives in this area and has concerns about projects being reviewed by federal agencies. It is a total discounting of the whole intention of community input into matters that impact their home. It is condescending and dismissive. I keep remembering that these people are paid with my taxes, and they are not doing their job.</p> <p>Living in a community that is affected by rail transport on a daily basis, I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States.</p> <p>As proposed, this project would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, and the Pacific Northwest.</p> <p>BNSF's proposal could change the built and natural environments, and BNSF's operations would also change as a result, further affecting safe navigability on the lake, emergency response times, rail safety and transportation in the region.</p> <p>Our community, economy, and the surrounding environment depend on maintaining and protecting Lake Pend Oreille and keeping families and businesses along the rail line safe.</p> <p>Please evaluate BNSF's proposal with the same seriousness and concern we have for this issue. Accordingly, I request the following:</p> <ol style="list-style-type: none"> <li>1. Draft a full environmental impact statement.</li> <li>2. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li> <li>3. Conduct multiple public hearings at different times and location[s] and give serious consideration to the input of the people who took the time to come and speak. Anyone who is employed by Burlington Northern should be required to disclose this when they give public comment, and the potential for bias in their comments should be noted. This is especially true if they are being given time off from work to attend the public meeting and speak in favor of the proposal.</li> </ol>

Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal (APPLICATION NO.: NWW-2007-01303 ) by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"> <li>1. Require a full environmental impact statement.</li> <li>2. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li> </ol>
15-Mar-18	<p>I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.</p> <p>The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.</p> <p>In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.</p> <p>And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.</p> <p>Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.</p>
16-Apr-18	<p>As a Sandpoint resident, I am very concerned about the potential impacts to Lake Pend Oreille, Sand Creek, and the city of Sandpoint by the proposed new railroad bridge. I would like the USCG to perform a full Environmental Impact Statement rather than an Environmental Assessment. The community deserves to know all the possible impacts to the lake (from which we draw our drinking water for part of year), fish, and transportation within our area.</p>

25-Mar-18	<p>[NOTE: This individual sent in a comment on 03/25/2018 to Steven Fischer]. I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal by taking a hard look at all the direct, indirect and cumulative impacts of the project. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.</p> <p>Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.</p>

26-Mar-18	<p>[NOTE: This individual sent in two comments on 03/26/2018 to Steven Fischer]. I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Extend the public comment period by 120 days from the date of the public notice.</li><li>2. Require a full environmental impact statement.</li><li>3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>

These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest. You know in your gut this isn't the wise path. We could be leading development of alternative technologies while securing the licensing profits for a smarter generation. We could even shed the burden of pretending our waste isn't rapidly damaging Earth's ability to support us. I suppose spraying Glyphosate on everything will sterilize us and kill off humankind before we have to worry about ocean levels but that is a pretty cynical outlook. We need a few statesmen and women to stand up for our collective health and wealth before it is out of our grasp.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. 21-Mar-18	<p>Living in a community that is affected by rail transport on a daily basis, I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States.</p> <p>As proposed, this project would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, and the Pacific Northwest.</p> <p>BNSF's proposal could change the built and natural environments, and BNSF's operations would also change as a result, further affecting safe navigability on the lake, emergency response times, rail safety and transportation in the region. In fact, this project could hamper naval submarine operations.</p> <p>Our community, economy, and the surrounding environment depend on maintaining and protecting Lake Pend Oreille and keeping families and businesses along the rail line safe.</p> <p>Please evaluate BNSF's proposal with the same seriousness and concern we have for this issue. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Extend the public comment period by 120 days from the date of the public notice.</li><li>2. Draft a full environmental impact statement.</li><li>3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li><li>4. Conduct at least one public hearing before the environmental impact statement is completed and at least one public hearing after it is released.</li></ol>

30-Apr-18

Asphodel Denning has a duplicate email letter sent on 4/30/18. I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.

BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.

Please evaluate BNSF's proposal (APPLICATION NO.: NWW-2007-01303 ) by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:

1. Require a full environmental impact statement.
2. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.

I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.

The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.

In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.

And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.

Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.

27-Mar-18	<p>[NOTE: This individual sent in two comments on 03/27/2018 to Steven Fischer]. I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. 05-May-18	<p>I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest. ¶ BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement. ¶ Please evaluate BNSF's proposal (APPLICATION NO.: NWW-2007-01303 ) by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following: 1. Require a full environmental impact statement. 2. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</p>
15-Mar-18	<p>I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.</p> <p>The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.</p> <p>In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.</p> <p>And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.</p> <p>Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.</p>

26-Apr-18	<p>I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.

BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.

Please evaluate BNSF's proposal by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:

1. Extend the public comment period by 120 days from the date of the public notice.
2. Require a full environmental impact statement.
3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.

20-Mar-18

Living in a community that is affected by rail transport on a daily basis, I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States.

As proposed, this project would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, and the Pacific Northwest.

BNSF's proposal could change the built and natural environments, and BNSF's operations would also change as a result, further affecting safe navigability on the lake, emergency response times, rail safety and transportation in the region. In fact, this project could hamper naval submarine operations.

Our community, economy, and the surrounding environment depend on maintaining and protecting Lake Pend Oreille and keeping families and businesses along the rail line safe.

Please evaluate BNSF's proposal with the same seriousness and concern we have for this issue. Accordingly, I request the following:

1. Extend the public comment period by 120 days from the date of the public notice.
2. Draft a full environmental impact statement.
3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.
4. Conduct at least one public hearing before the environmental impact statement is completed and at least one public hearing after it is released.

15-Mar-18	<p>I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.</p> <p>The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.</p> <p>In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.</p> <p>And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.</p> <p>Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.</p>

25-Mar-18

[NOTE: This individual sent in two comments on 03/25/2018 to Steven Fischer and the Coast Guard]. I am a physician, public health expert, and educator, as well as the parent of a preschooler, and am very concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.

BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.

Please evaluate BNSF's proposal by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:

1. Extend the public comment period by 120 days from the date of the public notice.
2. Require a full environmental impact statement.
3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.

25-Mar-18

[Note: Donoso left one other comment dated 3/25/18] I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal (APPLICATION NO.: NWW-2007-01303 ) by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Require a full environmental impact statement.</li><li>2. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>
07-Mar-18	<p>I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.</p> <p>The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.</p> <p>In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.</p> <p>And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.</p> <p>Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.</p>

26-Mar-18	<p>There are 3 identical comments.</p> <p>I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Extend the public comment period by 120 days from the date of the public notice.</li><li>2. Require a full environmental impact statement.</li><li>3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>
26-Apr-18	<p>Duplicate: I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. 16-Mar-18	<p>I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.</p> <p>The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.</p> <p>In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.</p> <p>And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.</p> <p>Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.</p>

15-Mar-18

I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.

The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.

In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.

And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.

Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.

21-Mar-18

I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.

The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.

In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.

And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.

Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.

These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal (APPLICATION NO.: NWW-2007-01303 ) by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"> <li>1. Require a full environmental impact statement.</li> <li>2. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li> </ol>

26-Apr-18	<p>I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal (APPLICATION NO.: NWW-2007-01303 ) by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Require a full environmental impact statement.</li><li>2. 09-Mar-18	<p>I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.</p> <p>The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.</p> <p>In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.</p> <p>And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.</p> <p>Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.</p>

Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Extend the public comment period by 120 days from the date of the public notice.</li><li>2. Require a full environmental impact statement.</li><li>3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>
27-Apr-18	<p>I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal (APPLICATION NO.: NWW-2007-01303 ) by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Require a full environmental impact statement.</li><li>2. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>

19-Mar-18

I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.

The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.

In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.

And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.

Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.

26-Jun-18	<p>The U.S. Army Corps of Engineers stating "blah, blah, blah" following the section on Public Involvement in its Draft Environmental Assessment for the Carey Creek Shoreline Stabilization Project is troubling to me as a local who lives in this area and has concerns about projects being reviewed by federal agencies.</p> <p>Living in a community that is affected by rail transport on a daily basis, I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States.</p> <p>As proposed, this project would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, and the Pacific Northwest.</p> <p>BNSF's proposal could change the built and natural environments, and BNSF's operations would also change as a result, further affecting safe navigability on the lake, emergency response times, rail safety and transportation in the region.</p> <p>Our community, economy, and the surrounding environment depend on maintaining and protecting Lake Pend Oreille and keeping families and businesses along the rail line safe.</p> <p>Please evaluate BNSF's proposal with the same seriousness and concern we have for this issue. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Draft a full environmental impact statement.</li><li>2. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li><li>3. Conduct at least one public hearing before the environmental impact statement is completed and at least one public hearing after it is released.</li></ol>

These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal (APPLICATION NO.: NWW-2007-01303 ) by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Require a full environmental impact statement.</li><li>2. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>

15-Mar-18	<p>I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.</p> <p>The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.</p> <p>In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.</p> <p>And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.</p> <p>Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.</p>
02-Apr-18	<p>[NOTE: This individual sent in two comment on 04/02/2018 to Steven Fischer and the Coast Guard]. I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. 27-Apr-18

I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.

BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.

Please evaluate BNSF's proposal (APPLICATION NO.: NWW-2007-01303 ) by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:

1. Require a full environmental impact statement.
2. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.

I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.

BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.

Please evaluate BNSF's proposal (APPLICATION NO.: NWW-2007-01303 ) by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:

1. Require a full environmental impact statement.
2. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.

26-Mar-18	<p>Living in a community that is affected by rail transport on a daily basis, I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. ¶ As proposed, this project would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, and the Pacific Northwest. ¶ BNSF's proposal could change the built and natural environments, and BNSF's operations would also change as a result, further affecting safe navigability on the lake, emergency response times, rail safety and transportation in the region. In fact, this project could hamper naval submarine operations. ¶ Our community, economy, and the surrounding environment depend on maintaining and protecting Lake Pend Oreille and keeping families and businesses along the rail line safe. ¶ On a more personal note, my drinking water comes from Lake Pend Oreille as does the drinking water of many of my neighbors. I can't even imagine the effect of a spill on our lives. ¶ Please evaluate BNSF's proposal with the same seriousness and concern we have for this issue. Accordingly, I request the following: 1. Extend the public comment period by 120 days from the date of the public notice. 2. Draft a full environmental impact statement. 3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal. 4. Conduct at least one public hearing before the environmental impact statement is completed and at least one public hearing after it is released.</p>

These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Extend the public comment period by 120 days from the date of the public notice.</li><li>2. Require a full environmental impact statement.</li><li>3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>
25-Mar-18	<p>I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Extend the public comment period by 120 days from the date of the public notice.</li><li>2. Require a full environmental impact statement.</li><li>3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>

27-Apr-18	<p>I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal (APPLICATION NO.: NWW-2007-01303 ) by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Require a full environmental impact statement.</li><li>2. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>
20-Mar-18	<p>I live in Sandpoint, ID and my daily life includes trains. I like hearing their whistles and their rumbling movement. But those same sounds now bring worry into my life. I know that what these trains are carrying could easily end Lake Pend Oreille as I know and love it. Pend Oreille is Idaho's largest lake and the fifth deepest lake in the United States. Its water is some of the cleanest in the US as well.</p> <p>The proposed bridge projects would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, and the Pacific Northwest.</p> <p>I am seriously concerned that these bridge projects would impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. In fact, this project could hamper naval submarine operations.</p> <p>I respectfully request that you evaluate BNSF's proposal with the same seriousness and concern we have for this issue. Such evaluation must include the following:</p> <ol style="list-style-type: none"><li>1. Extending the public comment period by 120 days from the date of the public notice.</li><li>2. Drafting a full environmental impact statement.</li><li>3. Fully analyzing the cumulative impacts (both locally and in the region) of BNSF's proposal.</li><li>4. Conducting at least one public hearing before the environmental impact statement is completed and at least one public hearing after it is released.</li></ol>

19-Mar-18	<p>I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.</p> <p>The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.</p> <p>In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.</p> <p>And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.</p> <p>Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.</p>

Require a full environmental impact statement.</li><li>3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>
01-Apr-18	<p>Living in a community that is affected by rail transport on a daily basis, I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. ¶ As proposed, this project would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, and the Pacific Northwest. ¶ BNSF's proposal could change the built and natural environments, and BNSF's operations would also change as a result, further affecting safe navigability on the lake, emergency response times, rail safety and transportation in the region. In fact, this project could hamper naval submarine operations. ¶ Our community, economy, and the surrounding environment depend on maintaining and protecting Lake Pend Oreille and keeping families and businesses along the rail line safe. ¶ Please evaluate BNSF's proposal with the same seriousness and concern we have for this issue. Accordingly, I request the following: 1. Extend the public comment period by 120 days from the date of the public notice. 2. Draft a full environmental impact statement. 3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal. 4. Conduct at least one public hearing before the environmental impact statement is completed and at least one public hearing after it is released.</p>

26-Apr-18	<p>I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. Require a full environmental impact statement.</li><li>3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>
16-Mar-18	<p>I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.</p> <p>The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.</p> <p>In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.</p> <p>And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.</p> <p>Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.</p>

27-Apr-18	<p>I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal (APPLICATION NO.: NWW-2007-01303 ) by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Require a full environmental impact statement.</li><li>2. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>
26-Apr-18	<p>As a long-time resident of the Pacific Northwest, I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. 16-Mar-18	<p>Aside from the corporate BS below, this is a seriously needed infrastructure improvement and BNSF seems willing to invest in it. Do insure that it is done well (that's your job) and that it gets done in a timely manner. And, yes, be wary that various special interest will want something here for their selfish (or uninformed) interest too. Yes, this includes obstructionist environmentalists that object to the carbon making up most of their bodies. That's your job too. If you don't know already, there is a huge amount of traffic through that corridor and it is indeed a bottleneck. Every year I spend a winter week at the Isaak Walton Inn on the line and see the traffic - huge! We got to keep sending all those grain trains west to pay for the t-shirts and iPhones in the east bound containers.</p> <p>OK, for the canned stuff now:</p> <p>I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.</p> <p>The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.</p> <p>In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. 14-Mar-18

I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.

The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.

In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.

And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.

Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.

25-Mar-18

[NOTE: This individual sent in two comments on 03/25/2018 to Steven Fischer]. I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.

BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.

Please evaluate BNSF's proposal by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:

1. Extend the public comment period by 120 days from the date of the public notice.
2. Require a full environmental impact statement.
3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.

25-Mar-18	<p>I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Extend the public comment period by 120 days from the date of the public notice.</li><li>2. Require a full environmental impact statement.</li><li>3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>

25-Mar-18	<p>[Note: Fisher left one other comment dated 3/25/18] I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. 14-Mar-18	<p>I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.</p> <p>The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.</p> <p>In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.</p> <p>And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.</p> <p>Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.</p>
27-Mar-18	<p>[NOTE: This individual sent in two comments on 03/27/2018 to Steven Fischer]. I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. 14-Mar-18	<p>I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.</p> <p>The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.</p> <p>In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.</p> <p>And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.</p> <p>Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.</p>
26-Apr-18	<p>I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal (APPLICATION NO.: NWW-2007-01303 ) by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Require a full environmental impact statement.</li><li>2. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>

21-Mar-18	<p>I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.</p> <p>The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.</p> <p>In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.</p> <p>And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.</p> <p>Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.</p>
26-Apr-18	<p>Richard Franken has a duplicate email letter sent on 4/26/18. I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. 26-Mar-18	<p>[NOTE: This individual sent in two comments on 03/26/2018 to Steven Fischer]. I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will entirely cross Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would allow increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would directly, indirectly and cumulatively affect Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>Please evaluate BNSF's proposal by taking a hard look at all the direct, indirect and cumulative impacts of the project. Please:</p> <ol style="list-style-type: none"><li>1. Extend the public comment period by 120 days from the date of the public notice.</li><li>2. 26-Apr-18	<p>I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal (APPLICATION NO.: NWW-2007-01303 ) by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Require a full environmental impact statement.</li><li>2. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>

15-Mar-18	<p>I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.</p> <p>The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.</p> <p>In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.</p> <p>And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.</p> <p>Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.</p>

26-Apr-18	<p>I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. 15-Mar-18	<p>I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.</p> <p>The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.</p> <p>In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.</p> <p>And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.</p> <p>Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.</p>

15-Mar-18

I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.

The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.

In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.

And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.

Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.

26-Apr-18

[NOTE: This individual sent in another comment on 04/26/2018 to Steven Fischer]. I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.

BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.

Please evaluate BNSF's proposal (APPLICATION NO.: NWW-2007-01303 ) by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:

1. Require a full environmental impact statement.
2. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.

Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>
26-Apr-18	<p>I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal (APPLICATION NO.: NWW-2007-01303 ) by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Require a full environmental impact statement.</li><li>2. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>

<p>29-Mar-18</p>	<p>[NOTE: This individual sent in two comments on 03/29/2018 to Steven Fischer]. I am very concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>I URGE you to evaluate BNSF's proposal by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"> <li>1. Extend the public comment period by 120 days from the date of the public notice.</li> <li>2. Require a full environmental impact statement.</li> <li>3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li> </ol>

15-Mar-18	<p>I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.</p> <p>The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.</p> <p>In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.</p> <p>And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.</p> <p>Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.</p>
27-Apr-18	<p>I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. 21-Mar-18

(NOTE: Nancy Gerth has another comment [different letter] dated 6/26/2018, different email address, in this matrix.) I cross the tracks at Sagle on my way to town, and am now stopped almost every time I go or come from Sandpoint. Will I be stopped every time? I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille.

I live here because of Lake Pend Oreille. I sail, camp and fish.

We need to know the changes that BNSF's proposal will make. Will it affect safe navigability on the lake, emergency response times, rail safety and transportation in the region? Will it hamper naval submarine operations? What about the recent spills?

Our community, economy, and the surrounding environment depend on maintaining and protecting Lake Pend Oreille and keeping families and businesses along the rail line safe.

When you think of Lake Pend Oreille and BNSF, please imagine what it is like to live here. Please, please:

1. Extend the public comment period by 120 days from the date of the public notice.
2. Draft a full environmental impact statement.
3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.
4. Conduct at least one public hearing before the environmental impact statement is completed and at least one public hearing after it is released.

We will not have another chance to look at this and plan for our future and the future of the lake.

26-Jun-18	<p>(NOTE: Nancy Gerth has another comment [different letter] dated 3/21/2018, different email address, in this matrix.) The oil spill this week in Iowa is more evidence that BNSF is not taking seriously the dangers to local communities of shipping oil and coal over our waterways. The U.S. Army Corps of Engineers stating "blah, blah, blah" following the section on Public Involvement in its Draft Environmental Assessment for the Carey Creek Shoreline Stabilization Project is the straw that is breaking our camel's back.</p> <p>I am affected by rail transport on a daily basis. I now call BNSF the "Engine that disconnects us."</p> <p>One of the bridges BNSF proposes will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States.</p> <p>As proposed, this project would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, and the Pacific Northwest.</p> <p>BNSF's proposal could change the built and natural environments, and BNSF's operations would also change as a result, further affecting safe navigability on the lake, emergency response times, rail safety and transportation in the region.</p> <p>Our community, economy, and the surrounding environment depend on maintaining and protecting Lake Pend Oreille and keeping families and businesses along the rail line safe.</p> <p>Please evaluate BNSF's proposal with the same seriousness and concern we have for this issue. Accordingly, I request the following:</p> <ol style="list-style-type: none"> <li>1. Draft a full environmental impact statement.</li> <li>2. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li> <li>3. Conduct at least one public hearing before the environmental impact statement is completed and at least one public hearing after it is released.</li> <li>4. Identify who wrote that "blah, blah, balh", who approved it, and release their names to the public.</li> </ol>
26-Mar-18	<p>Lake Pend Oreille faces continuing challenges from multiple sources of pollution. In this age of fossil-fuel driven climate change, I see no wisdom in building more infrastructure to support the burning of more carbon. ¶ At very least, the BNSF proposal should be carefully evaluated. Accordingly, I request the following: 1. Extend the public comment period by 120 days from the date of the public notice. 2. Draft a full environmental impact statement. 3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal. 4. Conduct at least one public hearing before the environmental impact statement is completed and at least one public hearing after it is released.</p>

30-Mar-18	<p>[NOTE: This individual sent in three comments on 03/30/2018 to Steven Fischer and the Coast Guard]. 06-Apr-18	<p>I am writing to encourage the prompt permitting approval for the Sandpoint Junction Connector Project over Lake Pend Oreille. The project would have wide-ranging benefits for the economy, trade, and transportation across Montana and our partners in the Pacific Northwest. ¶ The second line would run parallel to an existing track that crosses Lake Pend Oreille in Northern Idaho. This second track is desperately needed, and I was encouraged to see BNSF take up the investment on its own. Montanans rely on this route for safe, reliable transport of our agricultural goods and natural resource products, yet we have seen delays continually rise. I recognize that this is a significant investment by BNSF that will greatly impact many of my constituents. To further delay this project would be disappointing, considering Idaho's already stringent permitting process and an existing right of way. ¶ Again, I encourage you to recognize the economic benefits that the Sandpoint Junction Connector Project will provide to Montana and the rest of the region. I urge you to approve this project. If you wish to discuss this with me, please do not hesitate to reach out.</p>

19-Mar-18	<p>I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.</p> <p>The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.</p> <p>In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.</p> <p>And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.</p> <p>Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.</p>

09-Mar-18

I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.

The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.

In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.

And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.

Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.

26-Apr-18

[NOTE: This individual sent in another comment on 04/26/2018 to Steven Fischer]. I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.

BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.

Please evaluate BNSF's proposal (APPLICATION NO.: NWW-2007-01303 ) by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:

1. Require a full environmental impact statement.
2. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.

20-Apr-18	<p>Living in a community that is affected by rail transport on a daily basis, I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. ¶ As proposed, this project would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, and the Pacific Northwest. ¶ BNSF's proposal could change the built and natural environments, and BNSF's operations would also change as a result, further affecting safe navigability on the lake, emergency response times, rail safety and transportation in the region. In fact, this project could hamper naval submarine operations. ¶ Our community, economy, and the surrounding environment depend on maintaining and protecting Lake Pend Oreille and keeping families and businesses along the rail line safe. ¶ Please evaluate BNSF's proposal with the same seriousness and concern we have for this issue. Accordingly, I request the following: ¶ 1. Extend the public comment period by 120 days from the date of the public notice. ¶ 2. Draft a full environmental impact statement. ¶ 3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal. ¶ 4. Conduct at least one public hearing before the environmental impact statement is completed and at least one public hearing after it is released.</p>

25-Mar-18

I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.

BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.

Please evaluate BNSF's proposal by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:

1. Extend the public comment period by 120 days from the date of the public notice.
2. Require a full environmental impact statement.
3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.

26-Mar-18

I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.

BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.

Please evaluate BNSF's proposal by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:

1. Extend the public comment period by 120 days from the date of the public notice.
  2. Require a full environmental impact statement.
  3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.
- Please evaluate BNSF's proposal by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:

02-Apr-18	<p>[NOTE: This individual sent in two comments on 04/02/2018 to Steven Fischer]. I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Extend the public comment period by 120 days from the date of the public notice.</li><li>2. Require a full environmental impact statement.</li><li>3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>
16-Mar-18	<p>I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.</p> <p>The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.</p> <p>In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.</p> <p>And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.</p> <p>Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.</p>

<p>21-Mar-18</p>	<p>Living in a community that is affected by rail transport on a daily basis, I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States.</p> <p>As proposed, this project would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, and the Pacific Northwest.</p> <p>BNSF's proposal could change the built and natural environments, and BNSF's operations would also change as a result, further affecting safe navigability on the lake, emergency response times, rail safety and transportation in the region. In fact, this project could hamper naval submarine operations.</p> <p>Our community, economy, and the surrounding environment depend on maintaining and protecting Lake Pend Oreille and keeping families and businesses along the rail line safe.</p> <p>Please evaluate BNSF's proposal with the same seriousness and concern we have for this issue. Accordingly, I request the following:</p> <ol style="list-style-type: none"> <li>1. Extend the public comment period by 120 days from the date of the public notice.</li> <li>2. Draft a full environmental impact statement.</li> <li>3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li> <li>4. Conduct at least one public hearing before the environmental impact statement is completed and at least one public hearing after it is released.</li> </ol>

18-Mar-18	<p>As a resident of Sandpoint, I would like to express my disagreement with the proposed second railroad bridge across Lake Pend Oreille. There is already too much train traffic in this town, causing automobile delays and potential ambulance and fire department issues as there can be extended delays at railroad crossings when trains are stationary for 10 or more minutes. We have had to incur the expense of additional emergency vehicles and hubs (north AND south of some of the frequent offending tracks) to account for the possibility of a blocked route. A town the size of ours does not need additional emergency equipment, we need less train traffic. And the risk of derailment has come to the forefront now with so many accidents in the train industry JUST SINCE THE START OF 2018. We have a gorgeous and relatively unpolluted lake up here right now. One catastrophic derailment will end that for decades. That will impact our health, the wildlife, the flora, the tourism industry, and ultimately our livelihoods. All so large corporations can benefit. Please consider the people who live here (and all of those living in these small towns along the rail service line) when making your decision.</p>

Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.</p> <p>In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.</p> <p>And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.</p> <p>Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.</p>
26-Apr-18	<p>I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal (APPLICATION NO.: NWW-2007-01303 ) by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Require a full environmental impact statement.</li><li>2. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>

21-Mar-18	<p>Living in a community that is affected by rail transport on a daily basis, I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States.</p> <p>As proposed, this project would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, and the Pacific Northwest.</p> <p>BNSF's proposal could change the built and natural environments, and BNSF's operations would also change as a result, further affecting safe navigability on the lake, emergency response times, rail safety and transportation in the region. In fact, this project could hamper naval submarine operations.</p> <p>Our community, economy, and the surrounding environment depend on maintaining and protecting Lake Pend Oreille and keeping families and businesses along the rail line safe.</p> <p>Please evaluate BNSF's proposal with the same seriousness and concern we have for this issue. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Extend the public comment period by 120 days from the date of the public notice.</li><li>2. Draft a full environmental impact statement.</li><li>3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li><li>4. Conduct at least one public hearing before the environmental impact statement is completed and at least one public hearing after it is released.</li></ol>

08-May-18

The New Progressive Alliance at <http://newprogs.org/> urges you to require an Environmental Impact Statement rather than merely an Environmental Assessment for BNSF's proposal to build three new rail bridges in the Sand Creek/Lake Pend Oreille watershed. ¶ The National Environmental Policy Act requires an Environmental Impact Statement for actions "significantly affecting the quality of the human environment." An Environmental Assessment usually finds that no significant impact is likely and approves the action. ¶ Clearly this calls for an Environmental Impact Statement. Lake Pend Oreille is the biggest fresh water Lake in Idaho. Lake Pend Oreille is Idaho's largest and deepest lake. It is home to threatened bull trout and an entire ecosystem of aquatic life; the lake provides a regional drinking water source and is a major tourism asset. In 2017 alone, four trains derailed in this area near waterways. Just a single fossil fuel train derailment could damage and change Lake Pend Oreille forever. ¶ The proposal is to build three new rail bridges in the Sand Creek/Lake Pend Oreille watershed and the record on transportation of fossil fuels is not good. We should not be expanding unsafe fuel transportation with pipelines, trains, and other devices. (See reference 536. For a list of pipeline accidents since 2000 see reference 3296.) There has been a huge expansion in pipelines and dangerous fuel transportation by rail and truck. ¶ For verification see references 7, 8, 11, 13, 18, 19, 24, 31, 47, 55, 57, 62, 138, 154, 165, 214, 304, 310, 319, 331, 335, 337, 338, 341, 381, 383, 384, 395, 427, 447, 457, 487, 501, 508, 510, 512, 530, 536, 538, 539, 543, 548, 549, 566, 567, 568 - 574, 577, 578, 586 - 588, 596 - 598, 605, 606, 640, 721 - 724, 734 - 736, 778 - 780, 784, 849 - 855, 891, 974 - 981, 1081, 1082 - 1093, 1120, 1204 - 1212, 1354, 1389 - 1430, 1564-1565, 1603-1619, 1695-1697, 1734-1737, 1742, 1743, 1775, 1792-1809, 1978-1986, 2155-2175, 2242, 2251, 2320, 2459-2468, 2575-2579, 2812, 2825-2834, 2987-2989, 3175, 3189, 3231, 3284-3315, 3494-3496, 3882-3887, 3916, 3917 of this article "The Environment" located at:  
[http://www.newprogs.org/the\\_environment\\_under\\_the\\_democratic\\_republican\\_uniparty](http://www.newprogs.org/the_environment_under_the_democratic_republican_uniparty) ¶ The following adverse affects should also be considered.

- Water quality – increased transport of hazardous materials through the watershed and the possibility of derailment into our local waterways threatens water quality.
- Wildlife habitat – filling wetland and nearshore areas of the lake for additional bridge construction damages sensitive wildlife habitat beyond repair. The proposed project is within the range of bull trout and its critical habitat.
- Traffic – increased train traffic flow through at-grade rail crossings may cause more traffic congestion, not less, as proposed by BNSF. Rail traffic is expected to increase to 114 trains per day (from 58 per day now) by 2025.
- Emergency response – increased train traffic flow through at-grade rail crossings may cause emergency response delays.
- Noise – increased train traffic may result in more whistle-related noise pollution at and around rail crossings.
- Economy – increased train traffic may impact local businesses, property values, aesthetics and the tourism

25-Mar-18

I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest. BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement. ¶ Please evaluate BNSF's proposal by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:

1. Extend the public comment period by 120 days from the date of the public notice.
2. Require a full environmental impact statement.
3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.

¶ Our hope and reality for the future is that [quoting Henry David Thoreau] "... in Wildness is the preservation of the world." BNSF's proposals are man made, and not natural, thereby such "proposals" would noticeably deface or mar Idaho's (natural) environmental features, particularly in the eyes of Idaho's tourists whom come to see and appreciate its "wild" floral, sylvan, aquatic, and alpine beauty. Moreover, tourism is a significant source for Idaho's economy, and tourists want to see more conservation, and less (even better, no uncontrolled) development and urbanization.)

These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Extend the public comment period by 120 days from the date of the public notice.</li><li>2. Require a full environmental impact statement.</li><li>3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>
06-Apr-18	<p>As a part of the current St. Maries Bridge Replacement work, we will be having a 15 minute closure of the river bridge tomorrow (Saturday, 4/7) to move equipment. The closure will happen between 12:30 PM and 2:30 PM.</p> <p>Please help us alert the greater community about this closure by sharing with your family, friends and coworkers.</p> <p>Thank you for your support and patience.</p>

29-Apr-18	<p>I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. 27-Apr-18

I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.

BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.

Please evaluate BNSF's proposal (APPLICATION NO.: NWW-2007-01303 ) by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:

1. Require a full environmental impact statement.
2. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.

27-Apr-18

I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.

BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.

13-Mar-18	<p>I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.</p> <p>The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.</p> <p>In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.</p> <p>And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.</p> <p>Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.</p>

25-Apr-18

Handwritten letter from Donald Hagan, scanned to email. I am asking that the United States Coast Guard do a full Environmental Impact Statement in the hope that it will show that three new railroad bridges adjacent to the existing ones across Lake Pend Oreille near Sandpoint, ID will too greatly contaminate the water quality, lake bottom and shoreline and the marine life in the event of an oil or coal spill. Also, such a spill would very negatively impact tourism in the greater Sandpoint area. Furthermore, unless a regulation is passed to require coal cans to be sufficiently covered to prevent coal dust from falling into the lake, even more of it will contaminate the lake. I am concerned that these extra bridges will too greatly increase the rail traffic and attendant possibility of an oil spill because, as BNSF stated in their permit application, "the project need is based on continued growth of freight-rail service demands in the northern-tier high-volume traffic corridor between the midwest and the west coast." This is probably due to overpopulation. This existant increase is already increasing the wait times for vehicles at railroad crossings which apparently complicates train scheduling and results in a reduction of train traffic across the lake. I live on the lake and see that, even though trains cross about every ten to fifteen minutes, there are frequent times when no trains cross for twenty-five to fifty-five minutes. I think that more frequent crossings could occur if BNSF could operate independent of the road crossings. Thus, I conclude, tht if increased traffic is inevitable then this is not a bridge problem but rather a road-crossing problem, which could be alleviated by building over/underpasses at nearby road crossings. If this is done, then BNSF would be free of any concerns about vehicle delays and could have a more compressed train-traffic schedule. Another solution would be to run the railroad along I-90. However, this would be extremely expensive and would run into opposition from "nimbyites" along the route.

25-Mar-18

I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.

BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.

Please evaluate BNSF's proposal by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:

1. Extend the public comment period by 120 days from the date of the public notice.
2. Require a full environmental impact statement.
3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.

25-Mar-18	<p>I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. 20-Mar-18	<p>I am deeply concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho, making way for even more rail traffic through our community. Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States, is of major value to us as residents, our increasing tourism economy, and the native flora and fauna that depend on it.</p> <p>As proposed, this project would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, and the Pacific Northwest.</p> <p>BNSF's proposal could change the built and natural environments, and BNSF's operations would also change as a result, further affecting safe navigability on the lake, emergency response times, rail safety and transportation in the region.</p> <p>Our community, economy, and the surrounding environment depend on maintaining and protecting Lake Pend Oreille and keeping families and businesses along the rail line safe.</p> <p>Please evaluate BNSF's proposal with the same seriousness and concern we have for this issue. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Extend the public comment period by 120 days from the date of the public notice.</li><li>2. Draft a FULL environmental impact statement.</li><li>3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li><li>4. Conduct at least one public hearing before the environmental impact statement is completed and at least one public hearing after it is released.</li></ol>

The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal (APPLICATION NO.: NWW-2007-01303 ) by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Require a full environmental impact statement.</li><li>2. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>
26-Apr-18	<p>I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. 15-Mar-18	<p>I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.</p> <p>The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.</p> <p>In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.</p> <p>And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.</p> <p>Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.</p>

22-Mar-18	<p>Living in a community that is affected by rail transport on a daily basis, I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States.</p> <p>As proposed, this project would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, and the Pacific Northwest.</p> <p>BNSF's proposal could change the built and natural environments, and BNSF's operations would also change as a result, further affecting safe navigability on the lake, emergency response times, rail safety and transportation in the region. In fact, this project could hamper naval submarine operations.</p> <p>Our community, economy, and the surrounding environment depend on maintaining and protecting Lake Pend Oreille and keeping families and businesses along the rail line safe.</p> <p>Please evaluate BNSF's proposal with the same seriousness and concern we have for this issue. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Extend the public comment period by 120 days from the date of the public notice.</li><li>2. Draft a full environmental impact statement.</li><li>3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li><li>4. Conduct at least one public hearing before the environmental impact statement is completed and at least one public hearing after it is released.</li></ol>

The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Extend the public comment period by 120 days from the date of the public notice.</li><li>2. Require a full environmental impact statement.</li><li>3. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>
25-Mar-18	<p>I oppose the BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. 25-Mar-18	<p>[NOTE: This individual sent in two comments on 03/25/2018 to Steven Fischer and the Coast Guard]. I lived in Sandpoint, Idaho for several years, and spent much time sailing and fishing on Lake Pend Oreille.</p> <p>I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. 07-Mar-18	<p>I am writing to affirm my support for the Sandpoint Junction Connector project and urge your swift approval of the permits needed for construction. The project represents a significant private investment to enhance the rail network while taking deliberate steps to protect the local environment. It is a project worthy of an expedited approval.</p> <p>The Pacific Northwest economy is driven in large part by hundreds of industries, including agriculture and manufacturing firms, which depend on a world-class transportation network to get their goods to market. Thankfully, companies like BNSF Railway recognize this need and are willing to spend millions of dollars annually to keep our rail network healthy.</p> <p>In addition to supporting our regional trade-based economy, this project will immediately improve the efficiency of the overall rail network while also mitigating potential impacts to the community. The proposal to build a bridge and second track across Lake Pend Oreille – when completed – would allow trains to run in both directions, reducing the need for engineers to stop as they wait for clearance to cross. In turn, this project will mean shorter wait times on nearby roads and streets that cross BNSF tracks. By improving the efficiency of the line, this will also increase the safety of train traffic in the region.</p> <p>And on top of the project's value to the rail network, BNSF is committed to the highest standards for safety. BNSF is well prepared to deal with sensitive areas like Lake Pend Oreille, and maintains highly-detailed response plans for environmentally sensitive regions. The reality is rail is among the safest, most efficient and environmentally friendly ways to ship commodities. The best thing we can do is support proposals such as Sandpoint that will improve the system, increase safety, while protecting the environment.</p> <p>Sandpoint is a model proposal in many regards with significant support. Thank you for the opportunity to voice my support for the Sandpoint Junction Connector. I strongly urge your timely approval of the project's necessary permits.</p>

The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources. Additionally, BNSF's operations would change as a result of the new bridges in ways that impact safe navigability on the lake, emergency response times, rail safety and transportation in the region. These impacts are undeniably significant, and can only be reviewed in a thorough, comprehensive Environmental Impact Statement.</p> <p>Please evaluate BNSF's proposal (APPLICATION NO.: NWW-2007-01303 ) by taking a hard look at all the direct, indirect and cumulative impacts of the project. Accordingly, I request the following:</p> <ol style="list-style-type: none"><li>1. Require a full environmental impact statement.</li><li>2. Fully analyze the cumulative impacts (both locally and in the region) of BNSF's proposal.</li></ol>

26-Apr-18	<p>I am concerned about BNSF's proposal to construct a series of bridges in Bonner County, Idaho. One of the bridges will cross the entirety of Lake Pend Oreille, Idaho's largest lake and the fifth deepest lake in the United States. These new rail bridges would facilitate increased shipments of coal, oil, and other hazardous substances throughout the region. The bridges would create a wide range of direct, indirect and cumulative impacts affecting the city of Sandpoint, Bonner County, ID, and the Pacific Northwest.</p> <p>BNSF's proposal would impact soils, surface water, air quality and groundwater resources.
