

## **Best Practice: Barbed Wire Placed Along Jetties**

**Category:** Access Control  
**Location:** Larnaca, Cyprus  
**Date Observed:** June 2007  
**POC:** Not available.  
**WWW:** <http://www.cpa.gov.cy/>

**Description:** Rolls of barbed wire have been strung along the port's external waterside perimeter and along the jetties to deter access to the port facility from the water.

**Discussion:** Rolls of barbed wire strategically placed along points where access could be gained into the port from the water.

**Potential Down-side:** No potential downside identified.

**Conclusion:** This is a cost effective method to deter waterside access.

**Cost:** Estimated \$60 (USD) per meter of barbed wire.
