

Best Practice: Waterside Patrols by Federal Police

Category:	Guards and Police
Location:	Suriname Aluminum Company (SURALCO) – Port of Paranam, Suriname
Date Observed:	July 18, 2006
POC:	Mr. Ronald Rozenblad, Port Superintendent, SURALCO, 597-323281 ext. 9483
WWW:	www.PortWebSite.com

Description: Federal Police conduct random roving security patrols along the waterside of the facility to augment the facility security patrols.

Discussion: The facility is responsible for monitoring the facility and berthing areas. Random waterborne patrols of berthing areas are conducted by the Federal Police. SURALCO recently bought a new patrol boat that will be used to perform waterborne security patrols in addition to those conducted by the Federal Police. The Federal Police's random patrols enhance port security along the waterside of the facility. These patrols are part of the partnerships in security between government agencies and private industry.

Potential Down-side: No potential downsides identified.

Conclusion: Positive outcomes have resulted from partnerships in security. Government and private industry collaborations and investments in port security are a good thing. Security increases and theft decreases.

Cost: Costs associated with conducting the random patrols are unknown.
