COVER

The explosion of the SS Sansenina at San Pedro, California, December 17, 1976, was one of the more spectacular vessel casualties occurring during Fiscal Year 1977. It was also one of the most costly in terms of lives lost, injuries, and property damage.

Dramatic cases such as this, however, normally account for only a small portion of the deaths, injuries, and property losses suffered each year. Although they are widely publicized - often eventually leading to legislative or regulatory action looking toward prevention of their recurrence - they represent only a part of the picture. The overall picture can be presented only in numbers, which is the reason for the statistical summaries compiled each year by the Coast Guard and published in the Proceedings.

Interestingly, the figures show that there were about 15 percent fewer vessel casualties during this past year, with a decrease in deaths, injuries, and dollar losses from the previous year. The only exception was in the area of personnel injuries not caused by a vessel casualty.

POLLUTION REPORTING

Coast Guard pollution regulations require that when oil or a hazardous substance has been discharged into the navigable waters of the United States, the person in charge of the responsible vessel or facility must notify the Coast Guard immediately. Failure to report an incident can result in a fine of up to \$10,000, or imprisonment up to 1 year, or both.

The simplest and preferred way of reporting pollution incidents is by calling the toll-free number of the National Response Center. The Center, located at Coast Guard Headquarters in Washington, is manned 24 hours a day. It is specially equipped and staffed to facilitate reporting and to ensure the timely response necessary to minimize environmental damage.

To make a report to the National Response Center, dial:

800-424-8802

A FEW WORDS FROM A STATISTIC

Some time ago, we received the following letter from a reader serving on board a Military Sealift Command vessel.

It happens that this reader, as a result of the incident he describes, also appears elsewhere in this issue - as a number in the annual compilation of casualty statistics.

Dear Sir:

After reading an issue of "Proceedings of the Marine Safety Council," and the lists of shipboard accidents and their causes, I took it upon myself to write to you of a recent accident sus-

tained by myself, which may shed some new light on future proceedings.

This accident was close to being fatal and happened enroute to Japan - midway from Pearl Harbor.

We (deck department) were all working on the foredeck painting cargo pipes midships. All day long we were taking on small seas from rather large northern swells. Most of them just lapped over the deck. Since there was little or no wind and it was a bright sunny day, no one paid much attention to the swells. These swells came from a typhoon operating in the north area.

I was walking aft from the paint locker in the fo'c'sle head and had reached around midships when a particularly large swell hit the deck behind me. I was caught up in it and completely engulfed, and was hurled down the deck in a spin from which I couldn't extricate myself.

I was hurled about 100 feet, and in the process tore open my shin and ripped open the back of my upper thigh on a deck cleat, sustaining a wound so deep and wide I could put my hand inside. It could have been my head or stomach, or I could have easily went over the side.

The thing I want to point out is that even though we had beautiful weather conditions, this still happened. The sea hit directly on the beam and, catching me inside it, held me there while the ship at 16 knots passed underneath me. I thought you could do a small article on this type of accident as a warning to keep people off the foredeck when large swells are running broadside. Needless to say all further work on the foredeck was secured.

Our 3rd Mate put 8 stitches in me as we were 6 days from port, and as of this writing, aside from some infection, am in good shape.

Hoping this experience will help someone else avoid it.

Best regards,
C. J. M.

The casualty statistics for the past year would seem to indicate that accidents of this sort are

not very common, compared to some other categories. No doubt this low incidence results from the fact that almost everyone has a healthy respect for the power of boarding seas, and the need for utmost caution under such conditions.

Still, the writer makes a point that should be taken to heart by everyone.

Hazardous conditions do not always look as hazardous as they are.

It does not take a "classic case" of heavy weather, or poor maintenance, or negligence, or sloppy housekeeping to cause an accident. Too often, the less obvious the condition, the more likely it is to lead to disaster.

One answer is increased awareness, particularly in unusual, though seemingly unthreatening, circumstances.

In short, "when you least expect it, expect it."

ICEBERG TRACKING

Scientists from the Coast Guard Research and Development Center at Groton, Conn., have tagged five large tabular icebergs in Baffin Bay with satellite-tracked "ice buoys".

The devices, called ADRAMS (for Air Deployable Random Access Monitoring System) icebuoys, are being tracked by the Nimbus 6 satellite. The satellite relays the external temperature of the buoy and computes the geographic location from which the signals are being beamed. Each buoy is assigned a number so that many can be monitored at the same time.

The buoys were parachuted from a Coast Guard C-130 aircraft sent from the Elizabeth City, N.C., Air Station. All of the icebergs were well north of the Arctic Circle at the time they were tagged, four being on the Baffin Island side of Baffin Bay, and one on the Greenland side.

The bergs, which were up to 1/2 mile in length, are expected to drift south toward the Grand Banks of Newfoundland during the next few months, where they will present a hazard to shipping.

Statistics of Casualties

1977

Annually the U.S. Coast Guard presents a statistical summary of commercial vessel casualties that were investigated by Coast Guard marine inspectors during the previous fiscal year. The public, industry, and the Coast Guard have used the findings of these investigations to establish standards and determine the need for legislation to improve the protection of safety of life and property at sea.

The master of a vessel is required by law to report a marine casualty as soon as possible after its occurrence to the Coast Guard Officer in Charge, Marine Inspection. Casualties involving commercial vessels are required to be reported to the Coast Guard whenever the casualty results in any of the following:

- (a) actual physical damage to property in excess of \$1,500;
- (b) material damage affecting the seaworthiness or efficiency of a vessel;
- (c) stranding or grounding (with or without damage);
- (d) loss of life:
- (e) injury causing any person to remain incapacitated for a period in excess of 72 hours, except injury to harbor workers not resulting in death and not resulting from vessel casualty or

vessel equipment casualty.

The statistical summary on the following pages represents casualties to commercial vessels which meet the above criteria. It is important to note that the summary represents casualties reported to Coast Guard Headquarters in fiscal year 1977, which ended September 30, 1977. Statistics concerning noncommercial recreational boating accidents can be found in CG-357, Boating Statistics, published by the Office of Boating Safety.

This summary also includes those casualties serious enough by reason of dollar damage or number of deaths and/or injuries to warrant the convening of a Marine Board of Investigation. Included in this year's statistics are the following Marine Boards of Investigation: the collision of the MV Frosta and the ferry George Prince with the subsequent capsizing of the latter vessel at Mile 126 of the Lower Mississippi River; the explosion and sinking of the tankship Sansinena at Long Beach, California; and the structural failure and swamping of the tankship Chester A. Poling near Gloucester, Massachusetts. These major marine casualties resulted in 87 deaths, 33 injuries, and property damage

amounting to \$2,890,000.

Every event involving a vessel or her personnel which meets any of the conditions of a reportable casualty is of great concern to the Coast Guard. A number of reportable casualties are not investigated by the Coast Guard each year simply because they are not reported. Thus it is of primary importance that the masters of all vessels ensure that all casualties are reported and investigated. Through the cooperation of the masters, owners, and agents of commercial vessels many of the unreported casualties can be investigated.

This statistical tabulation is intended to summarize the casualty experience for the entire commercial fleet. Because this summary is so all-encompassing, the use of the statistics may lead to erroneous conclusions unless the limitations of the data are well understood.

The Information and Analysis Staff of the Office of Merchant Marine Safety will gladly assist in quantifying those limitations for each specific need. Comments and recommendations for changes or improvements to these statistics should be addressed to Commandant (G-MA/83), U.S. Coast Guard, Washington, D.C. 20590.

Statistical Summary of Casualties to Commercial Vessels

MERCHANT MARINE SAFETY PUBLICATIONS

The following publications may be obtained from the nearest marine safety office or marine inspection office of U.S. Coast Guard. Because changes to the rules and regulations are made from time to time, these publications can be kept current between revisions only by referring to the Federal Register. (Official changes to all federal regulations are published in the Federal Register, printed daily except Saturday, Sunday, and holidays.) Following the title of each publication in the table below are the date of the most recent edition and the dates of the Federal Registers affecting each.

The Federal Register may be obtained by subscription (\$5 per month or \$50 per year) or by individual copy (75 cents each) from SupDocs, U.S. Government Printing Office, Washington D.C. 20402.

CG No.	TITLE OF PUBLICATION
101-1	Specimen Examinations for Merchant Marine Deck Officers (2d and 3d Mate) (4-1-77).
101-2	Specimen Examinations for Merchant Marine Deck Officers (Master and Chief Mate) (4-1-76).
108	Rules and Regulations for Military Explosives and Hazardous Munitions (4-1-72). F.R. 7-21-72, 12-1-72, 6-18-75.
115	Marine Engineering Regulations (8-1-77). F.R. 9-26-77.
123	Rules and Regulations for Tank Vessels (8-1-77). F.R. 8-17-77, 9-12-77, 12-19-77.
169	Navigation Rules - International - Inland (5-1-77). F.R. 7-11-77, 7-14-77, 9-26-77, 10-12-77, 11-3-77, 12-6-77, 12-15-77.
*172	Rules of the Road - Great Lakes (7-1-72). F.R. 10-6-72, 11-4-72, 1-16-73, 1-29-73, 5-8-73, 3-29-74, 6-3-74, 11-27-74, 4-16-75, 4-28-75, 10-22-75, 2-5-76, 1-13-77, 11-3-77, 12-6-77.
174	A Manual for the Safe Handling of Flammable and Combustible Liquids and Other Hazardous Products (9-1-76).
176	Load Line Regulations (2-1-71). F.R. 10-1-71, 5-10-73, 7-10-74, 10-14-75, 12-8-75, 1-8-76.
182-1	Specimen Examinations for Merchant Marine Engineer Licenses (2d and 3d Assistant) (2-1-78).
182-2	" " " " " (First Assistant) (4-1-76).
182-3	" " " " " (Chief Engineer) (4-1-76).
184	Rules of the Road - Western Rivers (8-1-72). F.R. 9-12-72, 12-28-72, 3-8-74, 3-29-74, 6-3-74, 11-27-74, 4-16-75, 4-28-75, 10-22-75, 2-5-76, 3-1-76, 6-10-76, 7-11-77, 12-6-77, 12-15-77.
*190	Equipment Lists (5-1-75). F.R. 5-7-75, 6-2-75, 6-25-75, 7-22-75, 7-24-75, 8-1-75, 8-20-75, 9-23-75, 10-8-75, 11-21-75, 12-11-75, 12-15-75, 2-5-76, 2-23-76, 3-18-76, 4-5-76, 5-6-76, 6-10-76, 6-21-76, 6-24-76, 9-2-76, 9-13-76, 9-16-76, 10-12-76, 11-1-76, 11-4-76, 11-11-76, 12-2-76, 12-23-77, 4-4-77, 4-11-77, 4-21-77, 5-19-77, 5-26-77, 6-9-77.
191	Rules and Regulations for Licensing and Certification of Merchant Marine Personnel (11-1-76). F.R. 3-3-77, 8-8-77.
227	Laws Governing Marine Inspection (7-1-75).
