Matt Keim, BNSF – Manager Engineering

SHPO has requested information regarding the proposed new bridge crossing of Bridge Street (BNSF Bridge 3.0) to confirm that the new bridge will be separate from the existing bridge and will not alter or have adverse effects to the existing structure.

The proposed new Bridge 3.0 is planned for construction immediately adjacent to the existing structure. The work does not propose to bolt or anchor or otherwise alter the existing structure. Figure 1. is from the 90% design plans showing a typical section of the work. The existing bridge (red outline box) and the proposed bridge are close, but not connected. A portion of the new bridge will overhang the existing bridge to ensure there is no danger for someone or something to fall between the bridges.
